Secure SIP Trunk tussen CUCM en VCSconfiguratievoorbeeld

Inhoud

Inleiding Voorwaarden Vereisten Gebruikte componenten Configureren Netwerkdiagram VCS-certificaat verkrijgen VCS-certificaat verkrijgen VCS-zelfondertekend certificaat genereren en uploaden Toevoegen zelfondertekend certificaat van CUCM Server aan VCS Server Uploadcertificaat van VCS-server naar CUCM-server SIP-verbinding Verifiëren Problemen oplossen Gerelateerde informatie

Inleiding

Dit document beschrijft hoe u een beveiligde Session Initiation Protocol (SIP)-verbinding kunt instellen tussen Cisco Unified Communications Manager (CUCM) en Cisco TelePresence Video Communication Server (VCS).

CUCM en VCS zijn nauw geïntegreerd. Omdat video-eindpunten op CUCM of VCS kunnen worden geregistreerd, moeten er tussen de apparaten SIP-trunks bestaan.

Voorwaarden

Vereisten

Cisco raadt kennis van de volgende onderwerpen aan:

- Cisco Unified Communications Manager
- Cisco TelePresence Video Communication Server-modules
- Certificaten

Gebruikte componenten

Dit document is niet beperkt tot specifieke software- en hardware-versies. Dit voorbeeld gebruikt Cisco VCS-softwareversie X7.2.2 en CUCM versie 9.x.

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Configureren

Zorg ervoor dat de certificaten geldig zijn, voeg de certificaten aan de CUCM- en VCS-servers toe zodat zij elkaars certificaten vertrouwen en stel vervolgens de SIP-stam in.

Netwerkdiagram

VCS-certificaat verkrijgen

Standaard worden alle VCS-systemen voorzien van een tijdelijk certificaat. Ga op de admin pagina naar **Onderhoud > certificaatbeheer > servercertificaat**. Klik op **servercertificaat tonen** en er wordt een nieuw venster geopend met de ruwe gegevens van het certificaat:

	Server certificate						
[E Note: This VCS is part of a cluster but is not the configuration master. Any configuration changes made on this VCS may be lost. More information can be found on the Clustering help page.						
ſ	Server certificate data						
	Server certificate	PEM File Show server certificate					
	Currently loaded certificate expires on	Sep 30 2014					
	Reset to default server certificate						

Dit is een voorbeeld van de gegevens van het ruwe certificaat:

----END CERTIFICATE----
```

U kunt het certificaat decoderen en de certificaatgegevens bekijken door het gebruik van OpenSSL op uw lokale pc of door het gebruik van een online certificeringsdecoder zoals <u>SSL</u> <u>Shopper</u>:

VCS-zelfondertekend certificaat genereren en uploaden

Omdat elke VCS-server een certificaat met dezelfde gemeenschappelijke naam heeft, moet u nieuwe certificaten op de server plaatsen. U kunt ervoor kiezen zelfgetekende certificaten of certificaten te gebruiken die zijn ondertekend door de certificaatinstantie (CA). Zie de <u>Cisco</u> <u>TelePresence-certificaatcreatie en het gebruik met Cisco VCS-implementatiegids</u> voor meer informatie over deze procedure.

In deze procedure wordt beschreven hoe u de VCS zelf kunt gebruiken om een zelf-ondertekend certificaat te genereren en vervolgens het certificaat te uploaden:

1. Log in als wortel aan VCS, start OpenSSL en genereer een privésleutel:

~ # openssl				
OpenSSL> genrsa -out privatekey.pem 1024				
Generating RSA private key, 1024 bit long modulus				
++++++				
++++++				
e is 65537 (0x10001)				

2. Gebruik deze privé-toets om een certificaatgebarende aanvraag (CSR) te genereren:

```
OpenSSL> req -new -key privatekey.pem -out certcsr.pem
You are about to be asked to enter information that will be incorporated
into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN.
There are quite a few fields but you can leave some blank
For some fields there will be a default value,
If you enter '.', the field will be left blank.
____
Country Name (2 letter code) [AU]:BE
State or Province Name (full name) [Some-State]:Vlaams-Brabant
Locality Name (eg, city) []:Diegem
Organization Name (eg, company) [Internet Widgits Pty Ltd]:Cisco
Organizational Unit Name (eg, section) []:TAC
Common Name (e.g. server FQDN or YOUR name) []:radius.anatomy.com
Email Address []:
Please enter the following 'extra' attributes
to be sent with your certificate request
A challenge password []:
```

An optional company name []: OpenSSL> exit

3. Het zelf-ondertekende certificaat genereren:

```
~ # openssl x509 -req -days 360 -in certcsr.pem -signkey privatekey.pem -out vcscert.pem
Signature ok
subject=/C=BE/ST=Vlaams-Brabant/L=Diegem/O=Cisco/OU=TAC/CN=radius.anatomy.com
Getting Private key
~ #
```

4. Bevestig dat de certificaten nu beschikbaar zijn:

~ # ls -ltr *.pem -rw-r--r- 1 root root 891 Nov 1 09:23 privatekey.pem -rw-r--r- 1 root root 664 Nov 1 09:26 certcsr.pem -rw-r--r-- 1 root root 879 Nov 1 09:40 vcscert.pem

5. De certificaten met <u>WinSCP</u> downloaden en op de webpagina uploaden, zodat de VCS de certificaten kan gebruiken; u hebt zowel de privétoets als het gegenereerde certificaat nodig:

Server certificate					
Exercise Note: This VCS is part of a cluster but is not the configuration master. Any configuration changes made on this VCS may be lost. More information can be found on the Clustering help page.					
Server certificate data					
Server certificate	PEM File Show server certificate				
Currently loaded certificate expires on	Sep 30 2014				
Reset to default server certificate					
Certificate signing request (CSR)					
Certificate request	There is no certificate signing request in progress				
Generate CSR					
Upload new certificate					
Select the server private key me	"C:\privatekey.pem" Choose				
Select the server certificate file	"C:lvcscert.pem" (i)				
Upload server certificate data					

6. Herhaal deze procedure voor alle VCS-servers.

Toevoegen zelfondertekend certificaat van CUCM Server aan VCS Server

Voeg de certificaten toe van de CUCM-servers zodat de VCS ze zal vertrouwen. In dit voorbeeld gebruikt u de standaard zelfondertekende certificaten van CUCM; CUCM genereert zelfondertekende certificaten tijdens de installatie zodat u deze niet hoeft te maken zoals u op de VCS hebt gedaan.

In deze procedure wordt beschreven hoe een zichzelf ondertekend certificaat van de CUCMserver aan de VCS-server moet worden toegevoegd:

 Download het CallManager.pem certificaat van CUCM. Log in op de pagina OS-beheer, navigeer naar security > certificaatbeheer en selecteer vervolgens het zelf-getekende CallManager.pem-certificaat:

2. Voeg dit certificaat toe als een betrouwbaar CA-certificaat op de VCS.Ga op de VCS naar Onderhoud > certificaatbeheer > Trusted CA-certificaat en selecteer CA-certificaat tonen:

Trusted CA certificate						
Level Note: This VCS is part of a cluster but is not the configuration master. Any configuration changes made on this VCS may be lost. More information can be found on the Clustering help page.						
Upload						
Select the file containing trusted CA certificates	Choose i					
CA certificate	PEM Fie Show CA certificate					
[Helpert CA contificate] [Depart to default CA contificate]						
upload CA certificate Reset to default CA certificate						

Een nieuw venster wordt geopend met alle certificaten die op dit moment worden vertrouwd.

3. Kopieer alle momenteel vertrouwde certificaten naar een tekstbestand. Open het bestand CallManager.pem in een teksteditor, kopieer de inhoud ervan en voeg die inhoud toe aan de onderkant van hetzelfde tekstbestand na de momenteel vertrouwde certificaten:

=======================================

END CERTIFICATE

Als u meerdere servers in de CUCM-cluster hebt, kunt u deze allemaal hier toevoegen.

4. Sla het bestand op als CATroest.pem en klik op **CA-certificaat uploaden** om het bestand terug te uploaden naar de VCS:

Trusted CA certificate					
(Le Note: This VCS is part of a cluster but is not the configuration master. Any configuration changes made on this VCS may be lost. More information can be found on the Clustering help page					
Upload					
Select the file containing trusted CA certificates	"C1CATrust.pem" (hoose)				
CA certificate	PEM File Show CA certificate				
Upload CA certificate Reset to default CA certificate					

De VCS zal nu de door CUCM aangeboden certificaten vertrouwen.

5. Herhaal deze procedure voor alle VCS-servers.

Uploadcertificaat van VCS-server naar CUCM-server

Het CUCM moet vertrouwen hebben in de door de VCS aangeboden certificaten.

In deze procedure wordt beschreven hoe u het VCS-certificaat dat u op CUCM hebt gegenereerd, kunt uploaden als een CallManager-Trust-certificaat:

1. Ga in de pagina OS-beheer naar **Security > certificaatbeheer**, voer de certificaatnaam in, blader naar de locatie en klik op **Upload File**:

Upload Certificate/Certificate chain			
Upload File Close			
Status			
(1) Status: Ready			
Upload Certificate/Certificate chain			
Certificate CallManager-trust			
Description			
Upload File "C:\vcscert.pem" Choose			
- Upload File Close			
I *- indicates required item.			

2. Upload het certificaat vanaf alle VCS-servers. Doe dit op elke CUCM-server die met de VCS zal communiceren; Dit zijn doorgaans alle knooppunten die de CallManager Service uitvoeren.

SIP-verbinding

Zodra de certificaten worden gevalideerd en beide systemen elkaar vertrouwen, moet u de buurzone op VCS en de SIP Trunk op CUCM configureren. Zie de <u>Cisco TelePresence Cisco</u> <u>Unified Communications Manager met Cisco VCS (SIP Trunk)-implementatiegids</u> voor meer informatie over deze procedure.

Verifiëren

Bevestig dat de SIP-verbinding actief is in de buurzone op VCS:

Edit zone					
Accept proxied registrations		Deny 🔻 🤢			
Media encryption mode		Auto 🔹 👔			
Authentication					
Authentication policy		Treat as authenticated + (i)			
20 authoritaction touch mode					
SIP authentication trust mode
