Exemplo de configuração do LIMITE

Índice

Introdução

Este documento descreve a amostra CLI e a configuração GUI de Cisco unificou o proxy do SORVO (LIMITE) com debuga encenações diferentes desse roteamento de chamada do fósforo quatro.

Pré-requisitos

Requisitos

Cisco recomenda que você tem o conhecimento básico destes assuntos:

- Session Initiation Protocol (SIP)
- Cisco unificou o proxy do SORVO (o LIMITE)

Componentes Utilizados

A informação neste documento é baseada no LIMITE.

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto

potencial de qualquer comando.

Configurar

Esta seção descreve a configuração de quatro encenações do roteamento de chamada.

> Nota: Use a Command Lookup Tool (somente clientes registrados) para obter mais informações sobre os comandos usados nesta seção.

Cenário 1

Fluxo de chamadas: **Telefone IP 1 -- CME -- SORVO -- LIMITE -- SORVO -- CUCM -- Telefone IP 2**

Discar 408 202 2102 do telefone IP 1 registrado ao CallManager expresso (CME) a fim alcançar o telefone IP 2 registrado ao gerente das comunicações unificadas de Cisco (CUCM) através do LIMITE.

O CME atua como uma rede telefônica pública comutada (PSTN) nesta encenação.

1. O SORVO CONVIDA vem ao LIMITE do CME.

```
[DsTransportListener-2] DEBUG 2013.02.27 19:15:59:245 DsSipLlApi.Wire -

Nota: Alguns dispositivos, tais como CUCM, validam o identificador de recurso uniforme (URI) dos pedidos antes que os processem, assim que significa que o dispositivo final pôde precisar de ser configurado com o nome de domínio totalmente qualificado (FQDN) a fim permitir isto.

No caso de CUCM, **CUCM > o sistema > o parâmetro empresarial > da configuração de domínio > do conjunto do clusterwide nome de domínio totalmente qualificado** devem ser o mesmo que o nome de grupo de servidor.

Cenário 2

Fluxo de chamadas: **Telefone IP 1 -- CUCM -- SORVO -- LIMITE -- SORVO -- CME -- Telefone IP 2**

Discar 202 2222 do telefone IP 2. 408 deve ser prefixado com a PRE-normalização a fim alcançar o telefone IP 1.

O CME atua como o PSTN nesta encenação.

1. O SORVO CONVIDA vem ao LIMITE de CUCM.
