Introdução

Este documento descreve o procedimento para configurar o protocolo ponto-a-ponto sobre os Ethernet (PPPoE) no roteador do serviço da agregação de Cisco ASR 920 que atua como o cliente.

Pré-requisitos

Requisitos

Cisco recomenda que você tem o conhecimento da Conectividade fim-a-fim do Layer 1.

[Componentes Utilizados](#)

A informação neste documento é baseada no hardware de Cisco ASR 920.

A informação neste documento foi criada dos dispositivos em um ambiente de laboratório específico, todos os dispositivos usados neste documento começado com uma configuração do cleared(default).

Nota: Se sua rede está viva, assegure-se de que você compreenda o impacto potencial do comando any.

Configurar

Nota: Use a [Command Lookup Tool](#) ([somente clientes registrados](#)) para obter mais informações sobre os comandos usados nesta seção.

A configuração no Roteadores é da de volta à instalação traseira (cliente e servidor).

Configuração do Cliente

É específica à plataforma ASR 920.

```
interface GigabitEthernet0/0/1
  no ip address
  no ip redirects
  no ip proxy-arp
  ip tcp adjust-mss 1452
  speed 1000
  no negotiation auto
  cdp enable
  ip virtual-reassembly
  service instance 10 ethernet
  encapsulation untagged etype pppoe-all
  bridge-domain 10
!
interface Dialer1
  ip address negotiated
  encapsulation ppp
  dialer pool 1
  dialer-group 1
  ppp authentication pap chap callin
  ppp chap hostname cisco
  ppp chap password 0 cisco123
  ppp pap sent-username cisco password 0 cisco123
end
!
interface BDI10
  no ip address
  pppoe enable group global
  pppoe-client dial-pool-number 1
!
ip route 0.0.0.0 0.0.0.0 Dialer1
```

Configuração do servidor

Este permanece o mesmo em todos os cenários, independentemente da plataforma usada no lado do cliente.

```
username cisco password 0 cisco123
!
bba-group pppoe global
  virtual-template 1
!
interface GigabitEthernet0/0
  ip address 192.168.1.1 255.255.255.0
  ip rip advertise 4
  load-interval 30
```

```

duplex auto
speed auto
pppoe enable group global
!
interface Virtual-Template1
mtu 1492
ip unnumbered GigabitEthernet0/0
peer default ip address pool PPPoE_Pool
ppp authentication pap chap
!
ip local pool PPPoE_Pool 10.1.1.1 10.1.1.100

```

Verificar

Use esta seção para confirmar se a sua configuração funciona corretamente.

Estes debugam são permitidos em ambos cliente e servidor:

- Negociação de debug ppp
- Debug ppp authentication
- Debug ppp error
- Debug dialer

Logs do cliente:

```

Troubleshooting

Esta seção fornece informações que podem ser usadas para o troubleshooting da sua configuração.

Siga as [etapas](#) padrão do [Troubleshooting de PPP](#).

Nota: Se a relação BDI não é configurada e a configuração de PPPoE Client está aplicada na interface Gigabit Ethernet, você verá que a sessão de PPPoE não obtém estabelecida e indica este Mensagem de Erro.

```
padi timer expired  
Sending PADI: Interface = GigabitEthernet0/0/1
```
