[Informações Relacionadas](#)

Introdução

Este documento fornece a informação para compreender debuga no software do [®] do Cisco IOS

quando o modo principal e a chave pré-compartilhada (PSK) são usados.

Este documento igualmente fornece a informação em como traduzir certo debug linhas em uma configuração.

Estes assuntos não são discutidos:

- Passando o tráfego depois que o túnel foi estabelecido
- Conceitos básicos do IPsec ou do Internet Key Exchange (IKE)

Edição de núcleo

O IKE e o IPsec debugam tendem a obter enigmáticos. O centro de assistência técnica da Cisco (TAC) usa frequentemente estes erros para compreender onde um problema com o estabelecimento de túnel do IPSec VPN é encontrado.

Cenário

O modo principal é usado tipicamente entre túneis de LAN para LAN, ou em caso do Acesso remoto (EzVPN) quando os Certificados são usados para a autenticação.

Aqueles debugam são de um dispositivo IOS Cisco que execute o software release 15.2(1)T.

Dois cenários principais são descritos neste documento:

- Lado do iniciador IO
- Lado do que responde IO

Neste documento, um túnel VTI-baseado entre dois locais é estabelecido, com base no IPv6.

Notas:

Use a [ferramenta de consulta de comandos \(clientes registrados somente\)](#) a fim obter mais informação nos comandos usados neste documento.

Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar comandos debug.

Debuga usado

- [debug crypto isakmp](#)
- [debug crypto ipsec](#)
- kmi do debug crypto

Configuração do IOS Router

Configuração de criptografia

```
crypto isakmp policy 10
authentication pre-share

crypto isakmp key cisco address ipv6 ::/0

crypto ipsec transform-set TRA esp-aes esp-sha-hmac
mode transport

crypto ipsec profile PRO
set transform-set TRA

interface Tunnel23
ip address 192.168.23.2 255.255.255.0
ipv6 address FE80::23:2 link-local
tunnel source Ethernet0/0
tunnel mode ipsec ipv6
tunnel destination 2001: DB8::3
tunnel protection ipsec profile PRO
```

O outro lado

```
crypto isakmp policy 10
authentication pre-share

crypto isakmp key cisco address ipv6 ::/0

crypto ipsec transform-set TRA esp-aes esp-sha-hmac
mode transport

crypto ipsec profile PRO
set transform-set TRA

interface Tunnel23
ip address 192.168.23.3 255.255.255.0
ipv6 address FE80::23:3 link-local
tunnel source Ethernet0/0
tunnel mode ipsec ipv6
tunnel destination 2001: DB8::2
tunnel protection ipsec profile PRO
```

Depuração

Lado do que responde IO

Mensagem 1 do modo principal (MM1)

A proposta inicial para o IKE inclui:

- Criptografia
- Picar
- Grupo do Diffie-Hellman (DH)
- Vida

```
