Configurando o IPsec entre um roteador do Cisco IOS e um Cisco VPN Client 4.x para Windows usando o RAIO

Índice

Introdução

Este documento demonstra como configurar uma conexão entre um Cisco IOS Router e o Cisco VPN Client 4.x usando o RADIUS para autorização de grupo e autenticação de usuário. O Cisco IOS® Software Release 12.2(8)T ou posterior suporta conexões do Cisco VPN Client 3.x. Os VPN Clients 3.x e 4.x usam as políticas de Diffie Hellman (DH) group 2. O comando isakmp policy # group 2 permite que os VPN Clients se conectem.

Note: Explicar do IPSec VPN está agora disponível. Refira o IPSec VPN que esclarece mais configurações da informação e de amostra.

Pré-requisitos

Requisitos

Certifique-se de atender a estes requisitos antes de tentar esta configuração:

- Um conjunto de endereços a ser atribuído ao IPSec.
- Um grupo chamado "3000clients" com uma chave pré-compartilhada de "cisco123"

- Autorização e autenticação de usuário do grupo em um servidor Radius

Note: A contabilidade do RAIO não é apoiada neste tempo.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

- Um 2611 Router que execute o Cisco IOS Software Release 12.2(8)T.
- Cisco Secure ACS for Windows (todo o servidor Radius deve trabalhar)
- Cisco VPN Client para a versão do Windows 4.8 (todo o cliente VPN 4.x deve trabalhar)

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto potencial de qualquer comando.

Isto output do **comando show version no** roteador:

```
vpn2611#show version

Convenções

Consulte as Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos.

Material de Suporte

Este documento mostra a authentication e autorização, tal como a atribuição do Windows Internet

Naming Service (VITÓRIAS) e do Domain Naming Service (DNS), pelo servidor Radius. Se você está interessado em executar a autenticação pelo servidor Radius e a autorização localmente pelo roteador, refira configurar o IPsec entre um roteador do Cisco IOS e um Cisco VPN Client 4.x para Windows usando o RAIO para a autenticação de usuário.

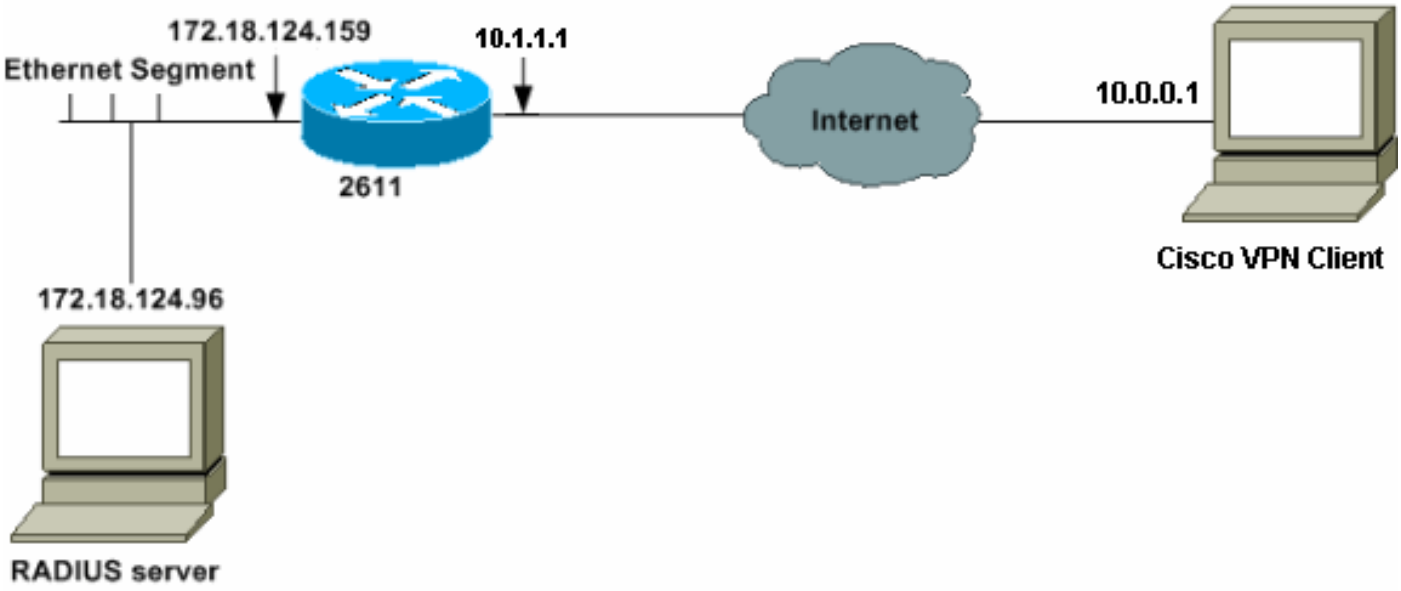
Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

Note: Use a ferramenta Command Lookup Tool (apenas para clientes registrados) para obter mais informações sobre os comandos usados neste documento.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:



Note: Os endereços IP de Um ou Mais Servidores Cisco ICM NT nesta rede de exemplo não são roteável nos Internet globais porque são endereços IP privados em uma rede de laboratório.

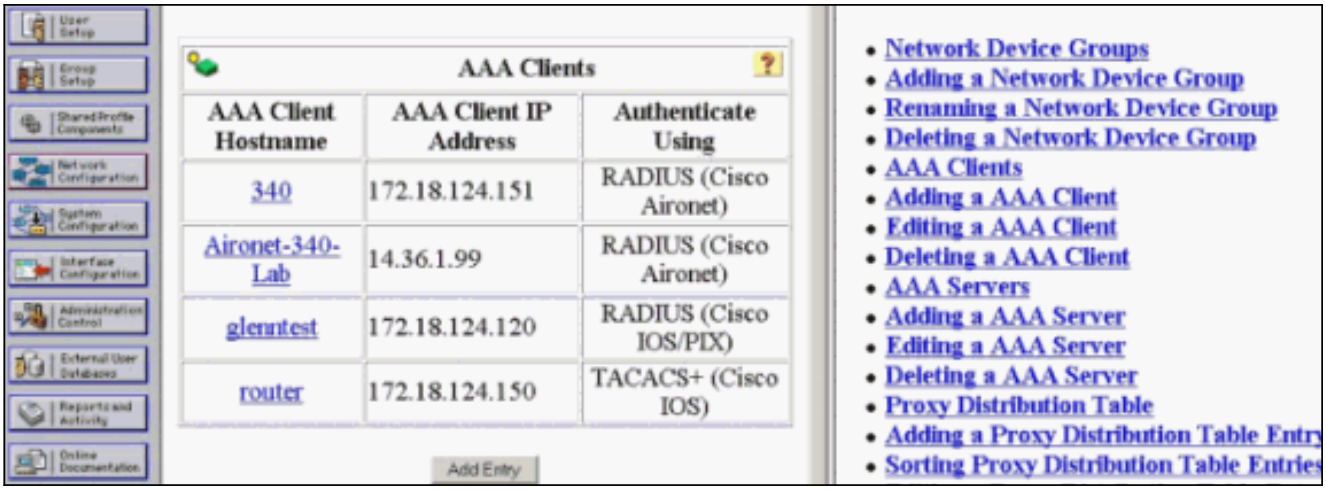
Configuração de servidor RADIUS

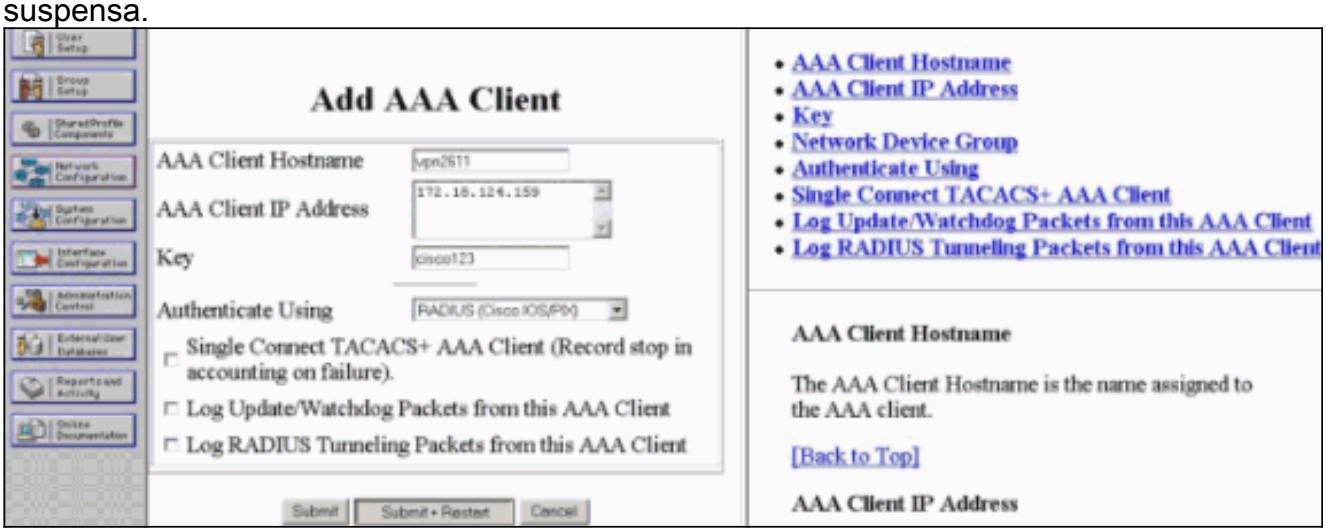
Configurar o servidor Radius para clientes de AAA (o roteador)

Conclua estes passos:

1. O clique **adiciona a entrada** para adicionar o roteador à base de dados do servidor radius.



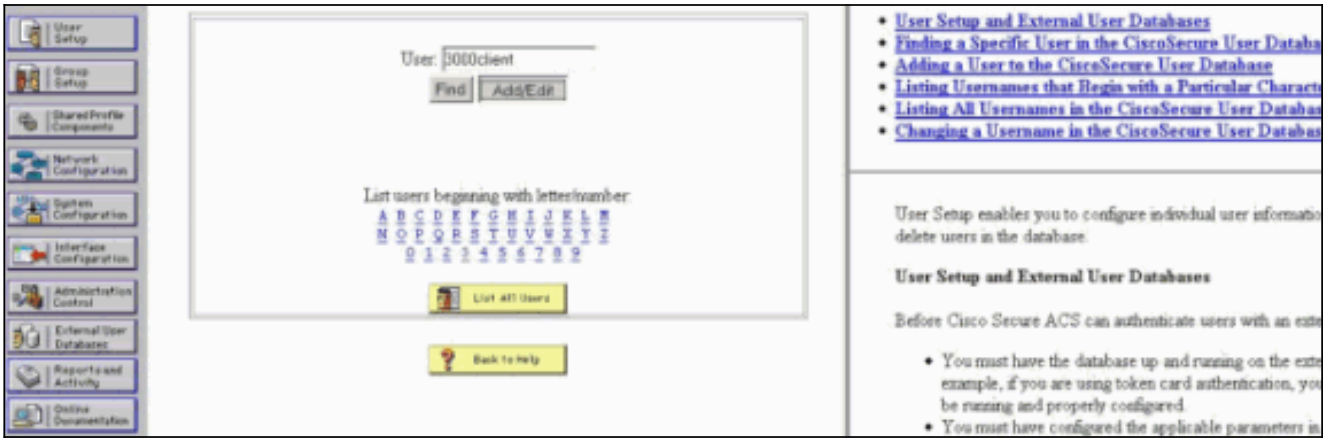
2. Especifique o endereço IP de Um ou Mais Servidores Cisco ICM NT do roteador "172.18.124.159" junto com a chave secreta compartilhada "cisco123" e escolha o **RAIO na** autenticação usando a caixa suspensa.



Configurar o servidor Radius para a authentication e autorização do grupo

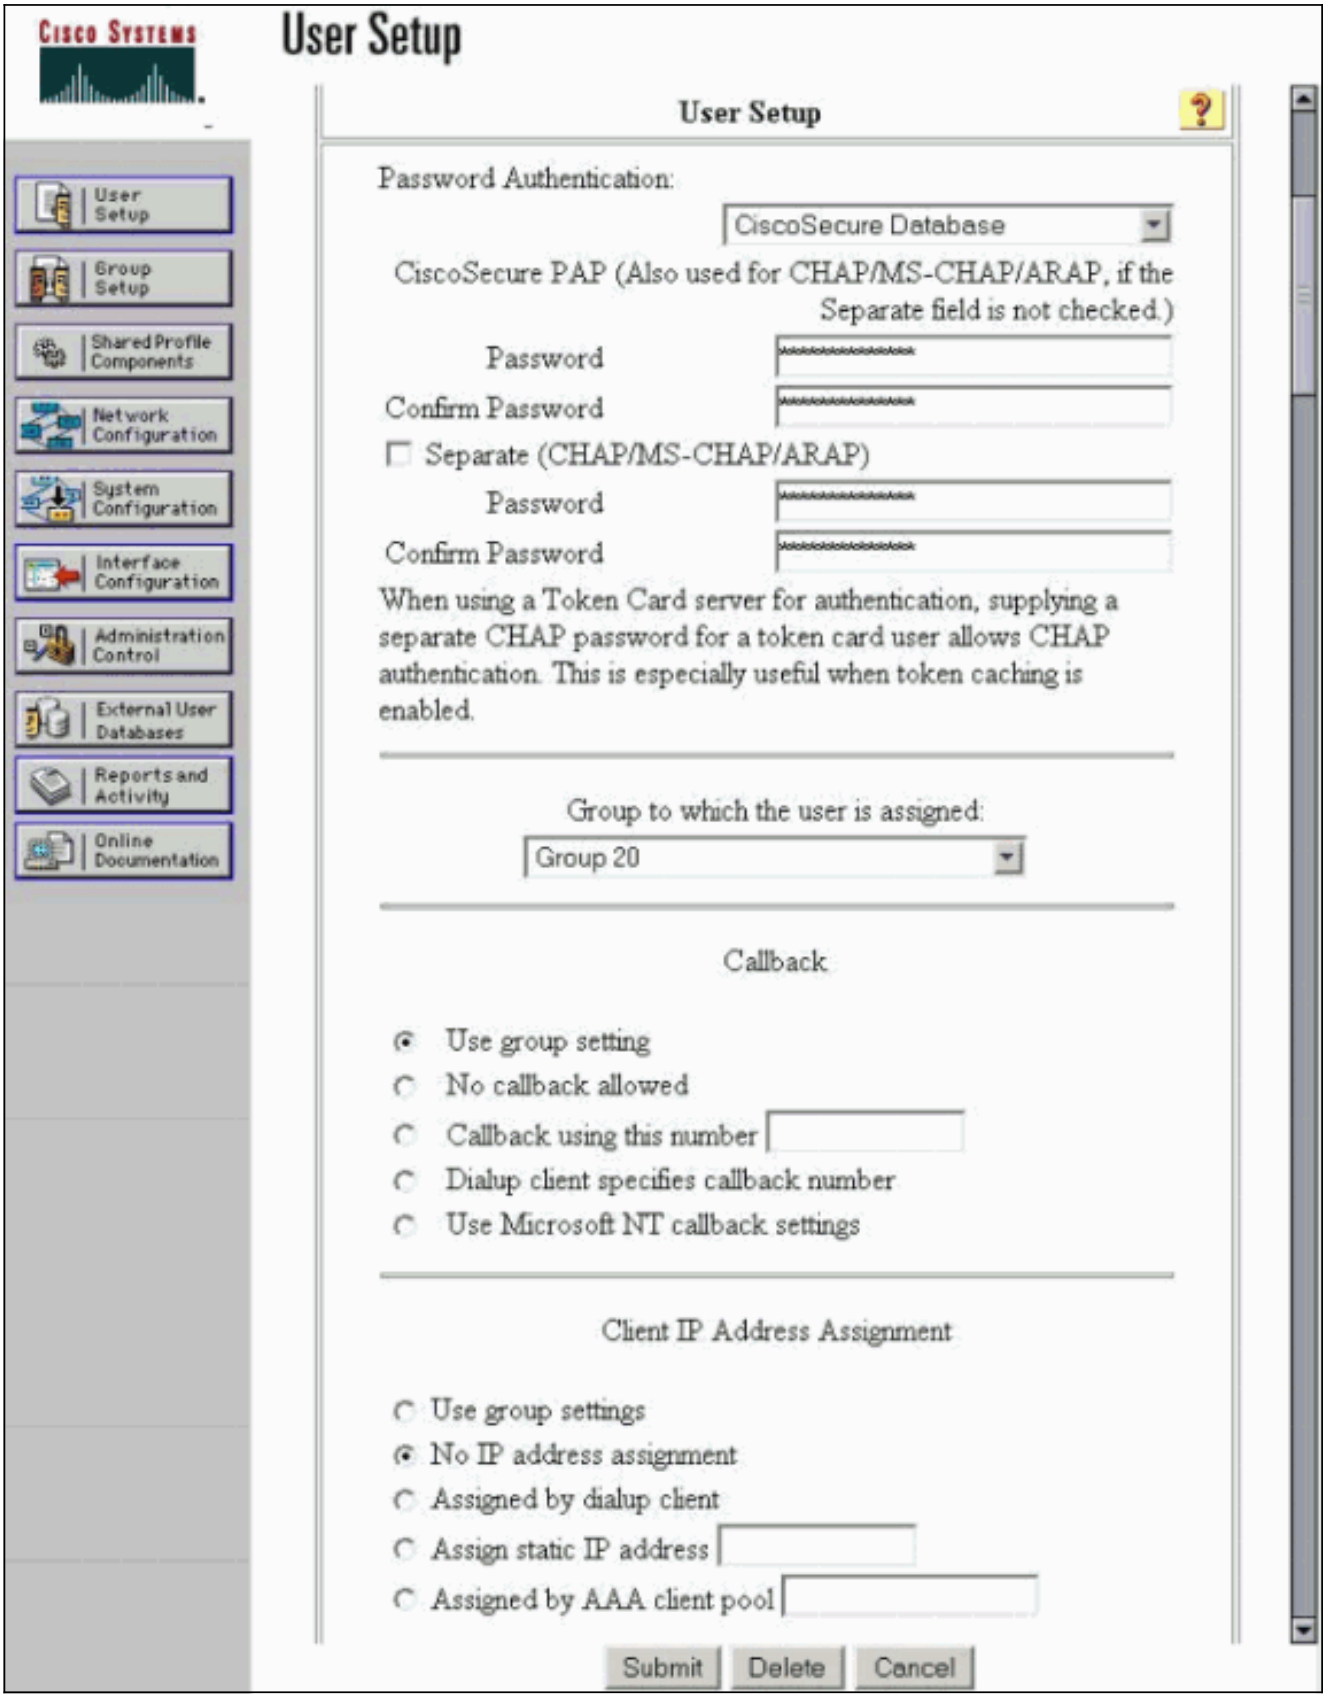
Conclua estes passos:

1. O clique **adiciona/edita** para adicionar um usuário nomeado **3000client ao** servidor Radius.



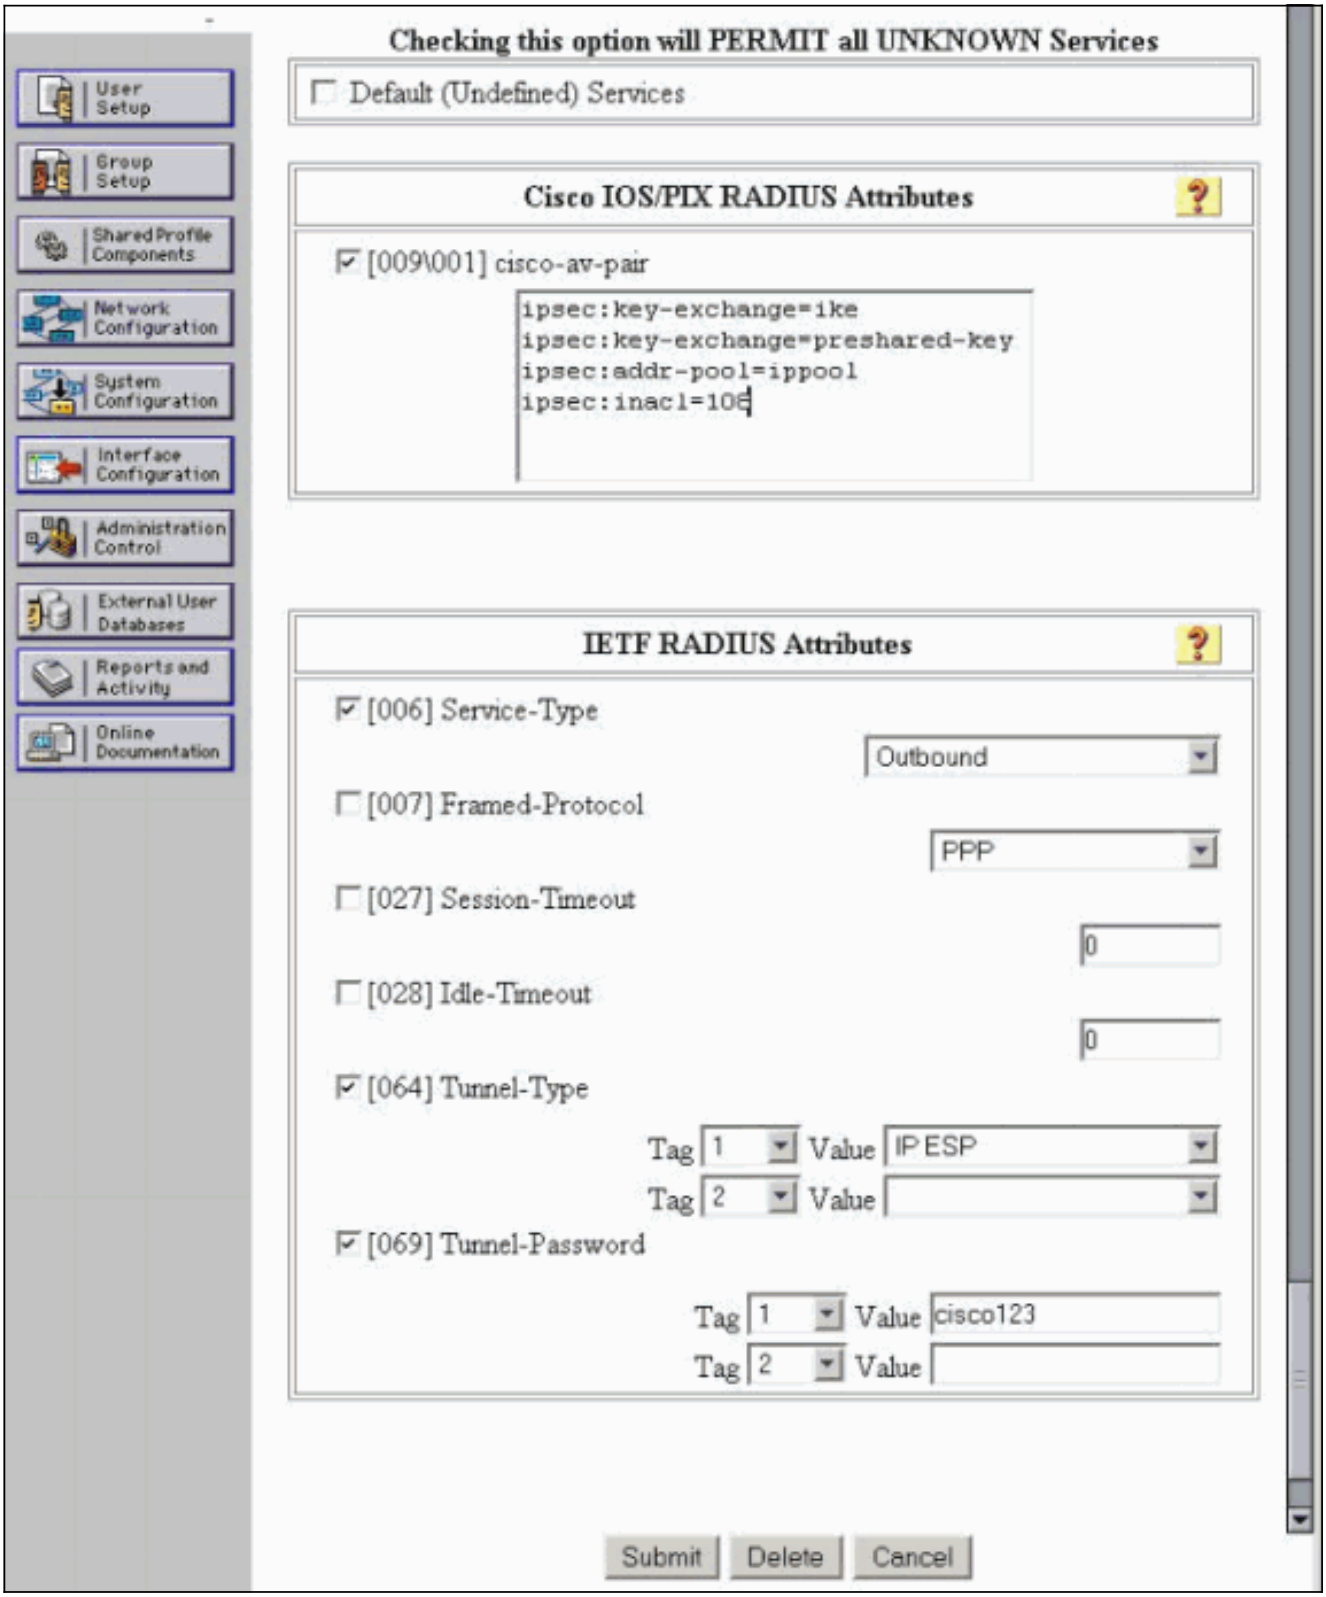
2. Especifique a senha **Cisco** para este usuário.Esta senha é um palavra-chave especial para o Cisco IOS, que indique que um perfil de grupo deve ser provido. Você pode traçar o usuário a um grupo seguro de Cisco se você prefere. Certifique-se de que **nenhuma atribuição do**

endereço IP de Um ou Mais Servidores Cisco ICM NT está escolhida.



3. Especifique os parâmetros de autorização do grupo que serão passados para baixo por esta conta de usuário de volta ao cliente VPN.Certifique-se de você ter o **Cisco-av-pair** permitido com estes atributos:IPsec: key-exchange=ikeIPsec: key-exchange=preshared-keyIPsec: addr-pool=ippoolipsec:inacl=108 (necessário somente se você usa o Split Tunneling no roteador)Também, certifique-se de que você tem atributos de raio de IETF do theseg permitidos:Atributo 6: Service-Type=OutboundAtributo 64: Tunnel-Type=IP ESPAtributo 69:

Tunnel-Password=cisco123 (este é seu group password no cliente VPN)Uma vez que você terminou, o clique **submete-se**.

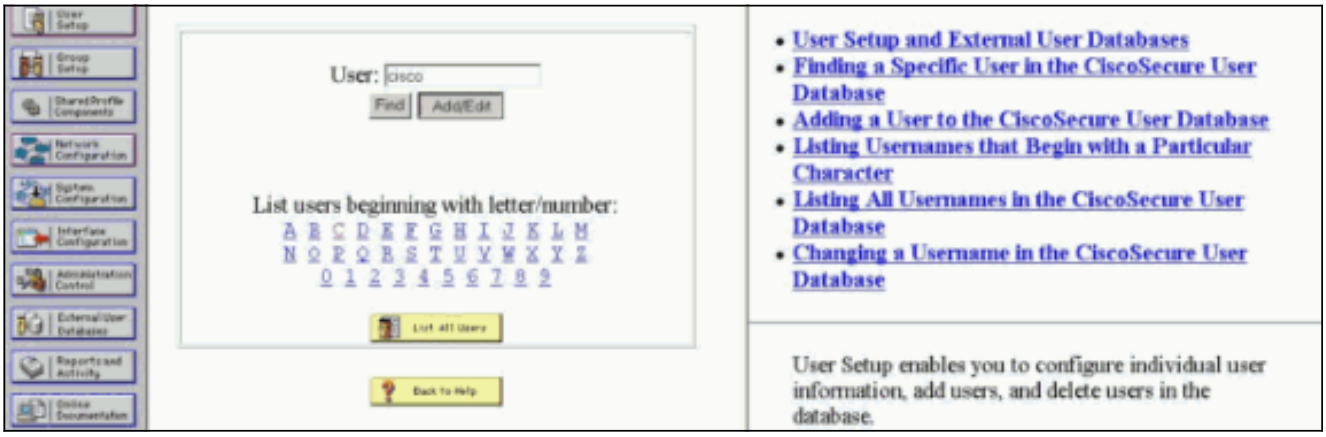


Sob atributos específicos do vendedor, você pode igualmente permitir estes atributos opcionais:IPsec: default-domain=IPsec: timeout=IPsec: idletime=IPsec: dns-servers=IPsec: wins-servers=

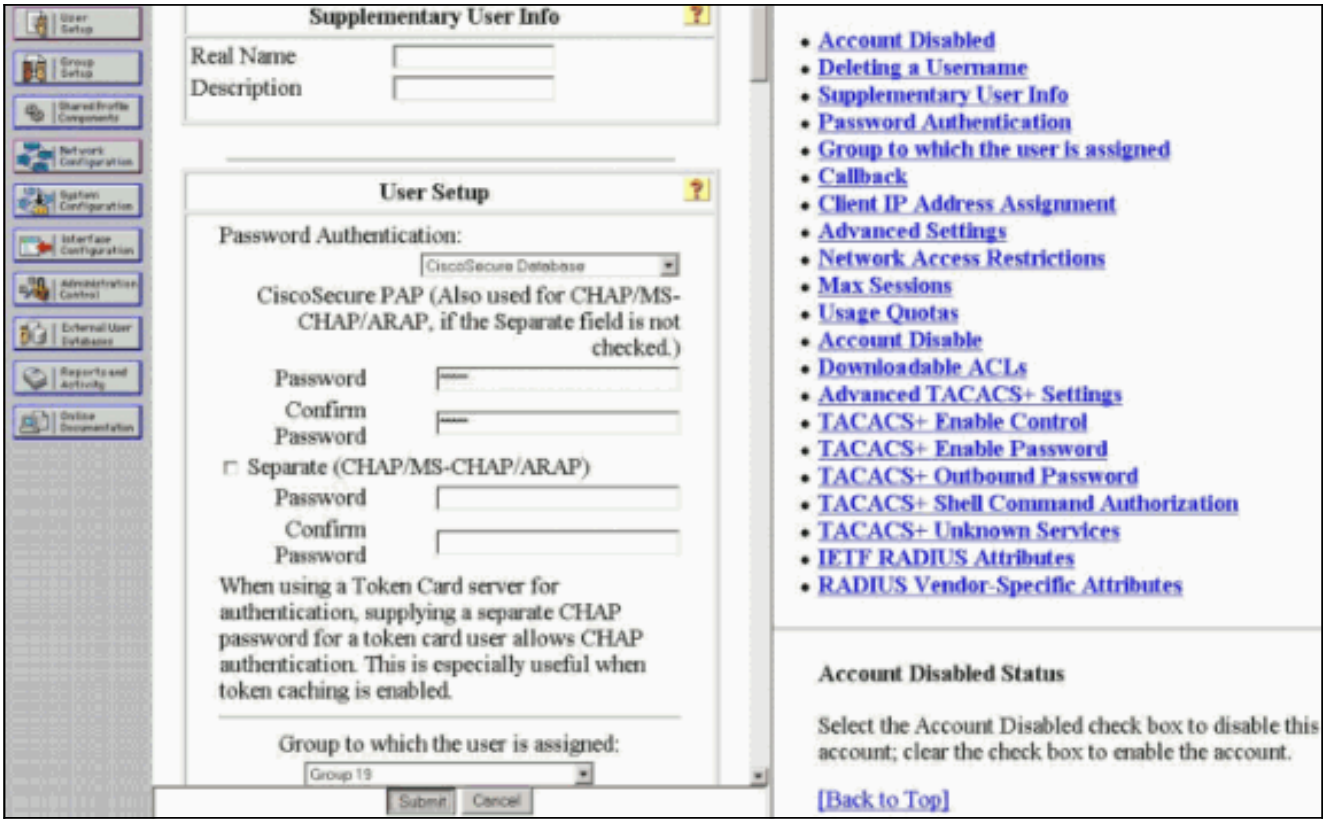
Configurar o servidor Radius para a autenticação de usuário

Conclua estes passos:

1. O clique **adiciona/edita** para adicionar o usuário VPN no base de dados seguro de Cisco.Neste exemplo, o username é Cisco.



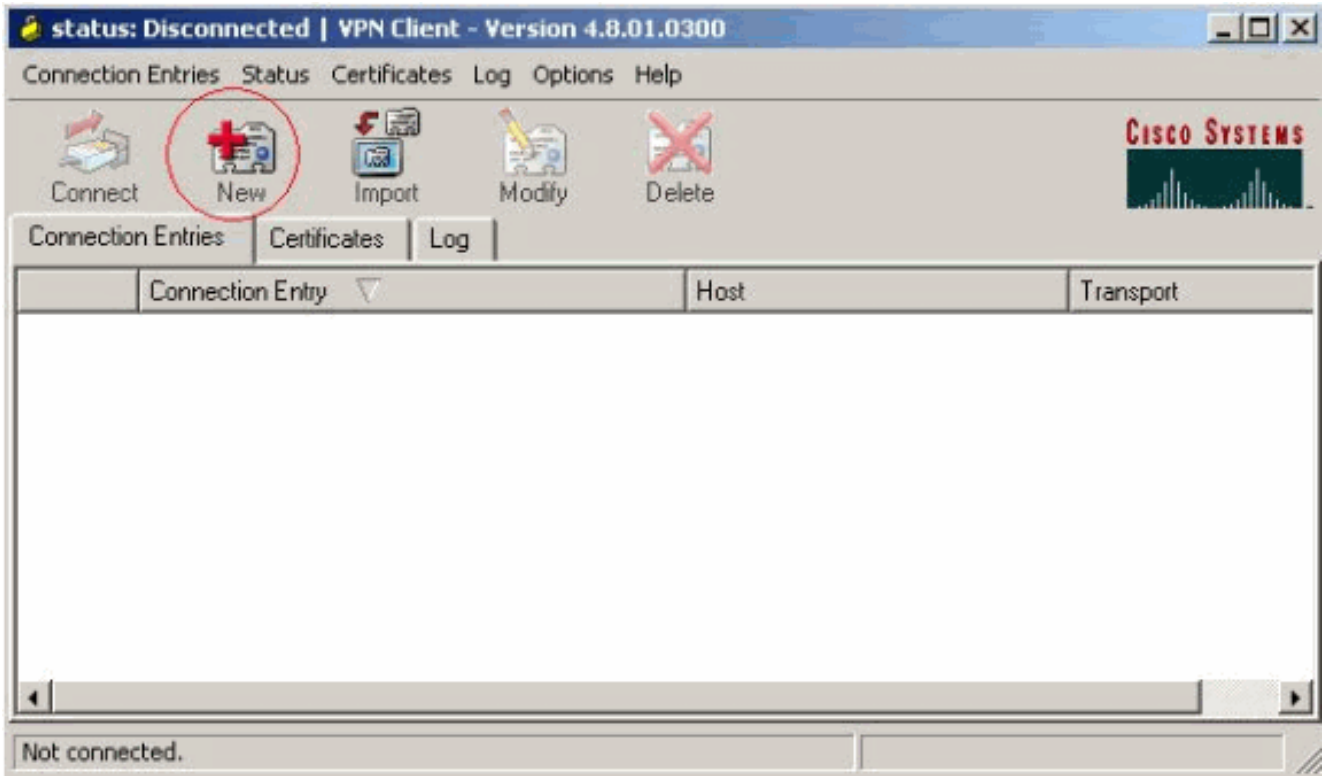
2. Na próxima janela, especifique a senha para o usuário **Cisco**. A senha é igualmente **Cisco**.Você pode traçar a conta de usuário a um grupo. Uma vez que você terminou, o clique **submete-se**.



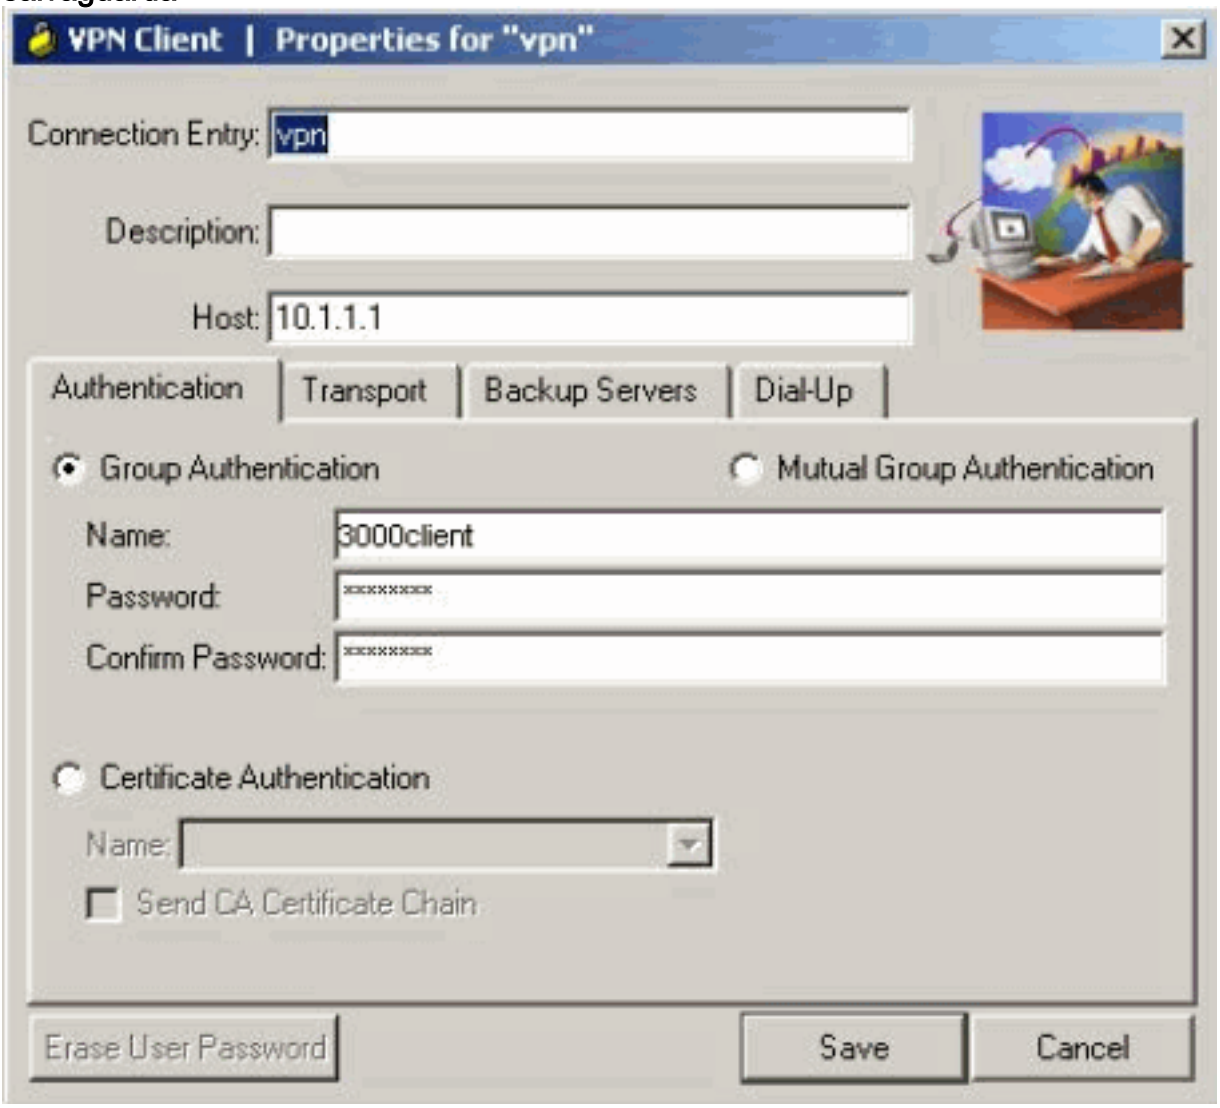
Configuração do cliente VPN 4.8

Termine estas etapas a fim configurar o cliente VPN 4.8:

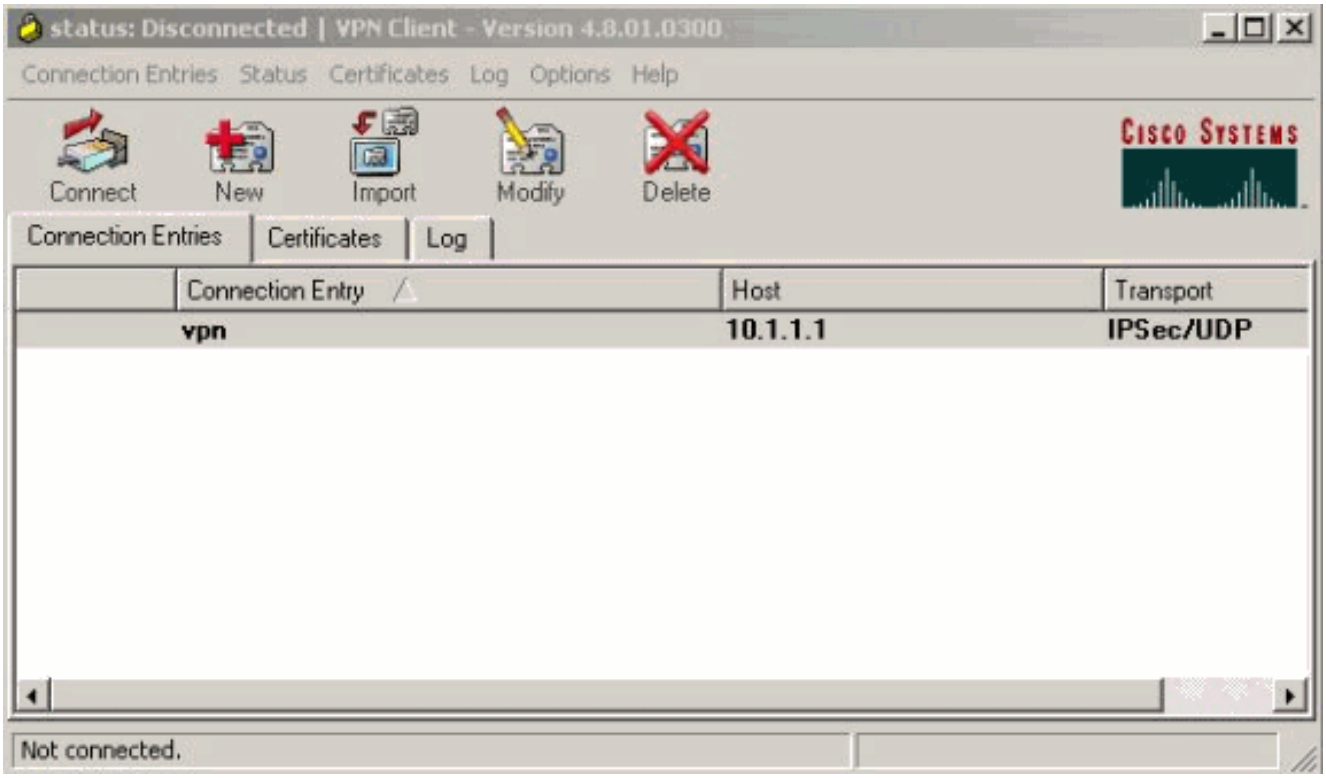
1. Escolha o **Iniciar > Programas > Cliente de VPN de Sistemas Cisco > o cliente VPN**.
2. Clique **novo** para lançar a janela de entrada nova da conexão de VPN da criação.



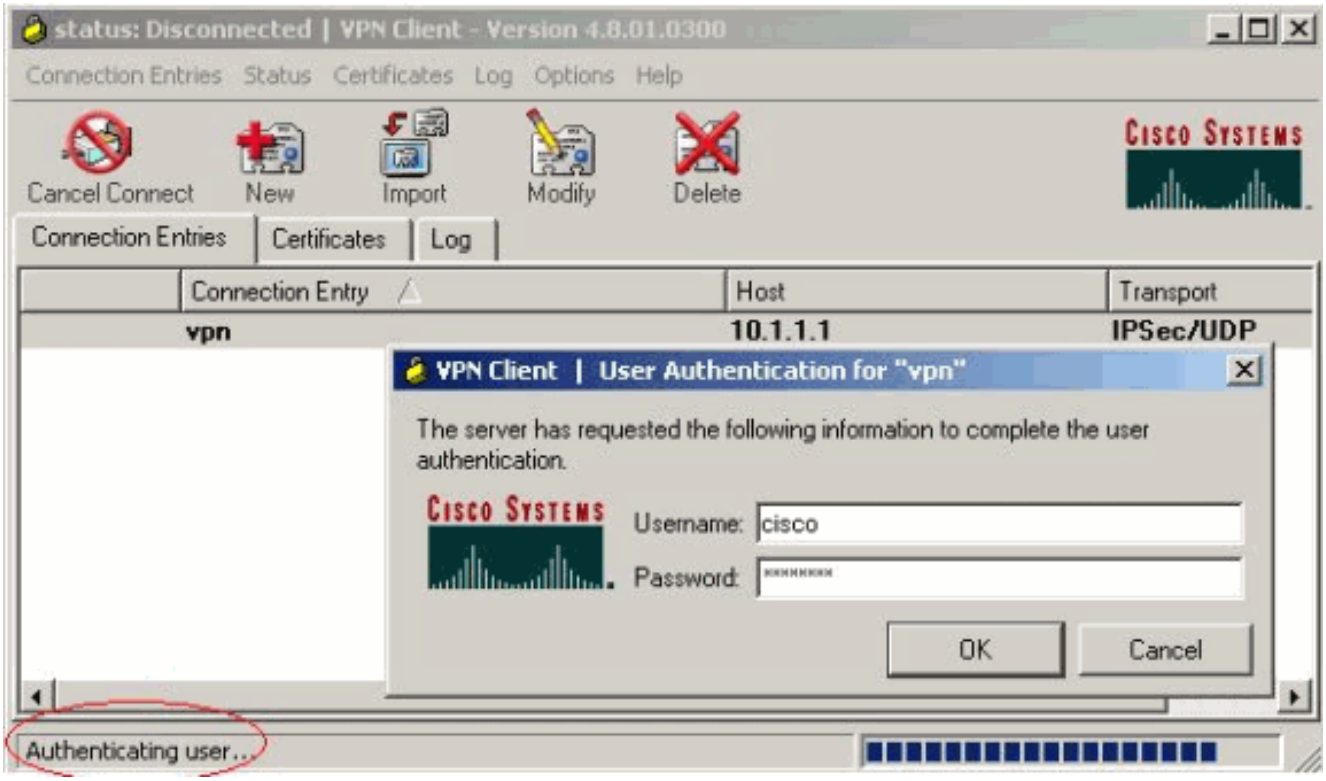
3. Dê entrada com o nome da entrada de conexão junto com uma descrição. Incorpore o endereço IP externo do roteador à caixa do host. Então, incorpore o nome do grupo VPN e a senha e clique a
salvaguarda.



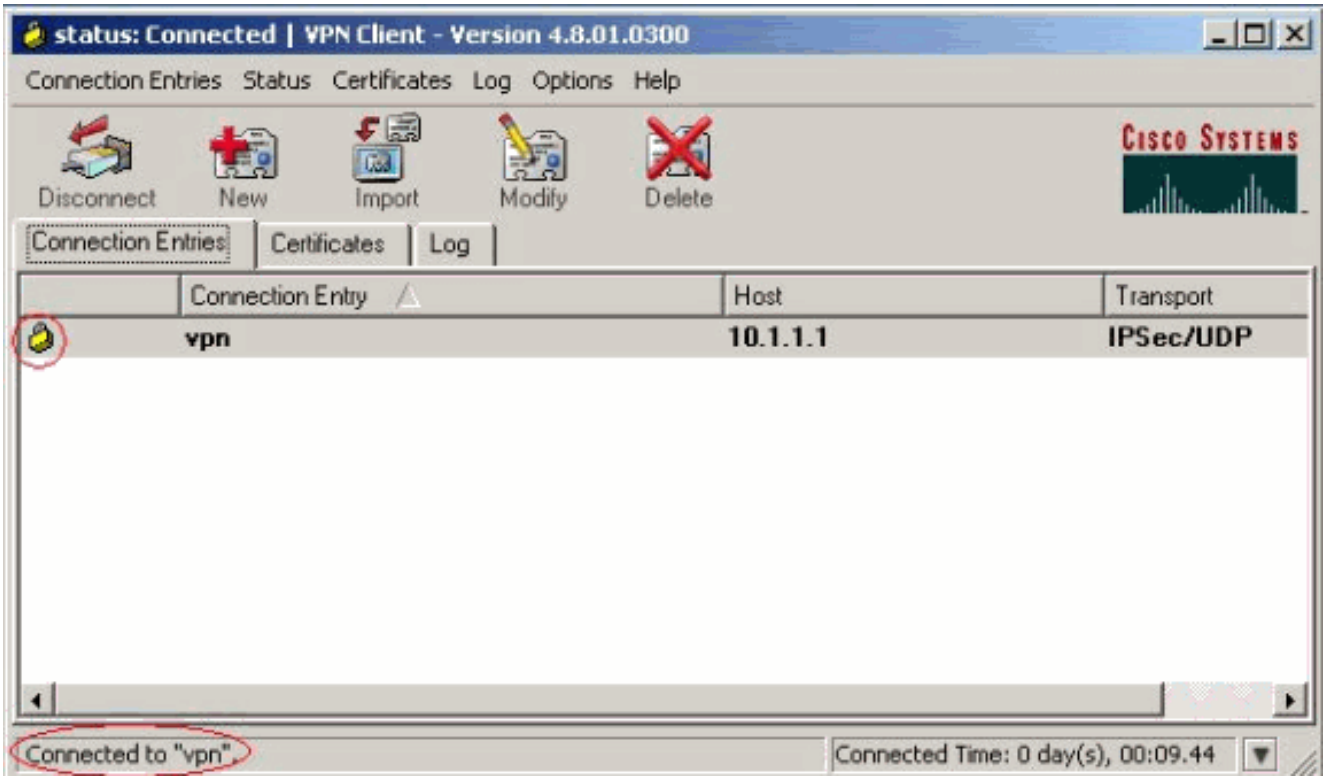
4. Clique sobre a conexão que você quer se usar e o clique **conecta da** janela principal do cliente
VPN.



5. Quando alertado, incorpore a informação do nome de usuário e senha para o Xauth e clique a **APROVAÇÃO** para conectar à rede
remota.



O cliente VPN obtém conectado com o roteador na instalação central.



Verificar

Use esta seção para confirmar se a sua configuração funciona corretamente.

A Output Interpreter Tool (apenas para clientes registrados) (OIT) suporta determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Troubleshooting

Use esta seção para resolver problemas de configuração.

Comandos para Troubleshooting

A Output Interpreter Tool (apenas para clientes registrados) (OIT) suporta determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Note: Consulte Informações Importantes sobre Comandos de Depuração antes de usar comandos **debug**.

- **debug crypto ipsec** — Exibe informações de depuração sobre conexões de IPSec.
- **debug crypto isakmp** — Exibe informações de depuração sobre conexões de IPSec e mostra o primeiro conjunto de atributos negados devido a incompatibilidades em ambas as extremidades.
- debug crypto engine — Exibe informações a partir do cripto mecanismo.
- debug aaa authentication — Exibe informações sobre autenticação AAA/TACACS+.
- **debug aaa authorization raduis** — Indica a informação na autorização AAA/TACACS+.
- **debugar o raio** — Informação dos indicadores em uma comunicação do Troubleshooting entre o servidor Radius e o roteador.

Saída de depurações

Esta seção fornece informações de depuração do roteador, que podem ser usadas para resolver problemas na configuração.
