## [Introdução](#)

Este documento descreve como configurar o Dynamic Multipoint VPN (DMVPN) e o Easy VPN com Xauth no mesmo roteador. Esta instalação compreende os spokes DMVPN com endereços atribuídos dinamicamente. Os perfis do Internet Security Association and Key Management Protocol (ISAKMP) permitem separar os métodos de autenticação dos spokes DMVPN com endereços atribuídos dinamicamente ou dos Easy VPN Clients.

## [Pré-requisitos](#)

### [Requisitos](#)

Não existem requisitos específicos para este documento.

### [Componentes Utilizados](#)

As informações neste documento são baseadas nestas versões de software e hardware:

- Cisco 2691 e 3725 Router que executam Software Release 12.3(3) e 12.3(3)a de Cisco IOS®

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto potencial de qualquer comando.

### [Convenções](#)

Consulte as [Convenções de Dicas Técnicas da Cisco](#) para obter mais informações sobre convenções de documentos.

## Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

**Note:** Use a ferramenta [Command Lookup Tool](#) ([apenas para clientes registrados](#)) para obter mais informações sobre os comandos usados neste documento.

## Diagrama de Rede

Este documento utiliza a seguinte configuração de rede.

## Configurações

Este documento utiliza estas configurações.

- [Configuração do hub sv9-2](#)
- [Configuração de raio sv9-3](#)
- [Configuração do raio sv9-4](#)

Esta seção fornece informações que você pode usar para confirmar se sua configuração funciona adequadamente.

Os comandos Debug que são executado no roteador de hub confirmam que os parâmetros corretos estão combinados para o spoke e as conexões de cliente de VPN. Execute estes **comandos debug**.

A [Output Interpreter Tool \(apenas para clientes registrados\)](#) (OIT) suporta determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

**Note:** Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar comandos **debug**.

- **debug crypto isakmp** - Exibe mensagens sobre eventos IKE.
- **IPsec do debug crypto** — Indica a informação sobre eventos de IPsec.
