[Informações Relacionadas](#)

[Introdução](#)

Este documento demonstra como aplicar Listas de acesso às interfaces de discagem com um servidor Radius. Há dois métodos possíveis:

- Defina a lista de acessos numerada no roteador, a seguir proveja a lista de acessos numerada no servidor Radius. A maioria de software release de Cisco IOS® apoiam este. Por exemplo, defina a lista de acessos numerada no roteador e proveja-os no server.
- Defina a lista de acessos inteira no server. O Cisco IOS Software Release 11.3 ou Mais Recente é exigido para este método de usuário. Por exemplo, defina a lista de acessos no servidor Radius (um pouco do que no NAS). Quando o atendimento conecta, o NAS autentica o atendimento com o servidor Radius. Junto com toda a informação da autenticação, o server retorna a lista de acessos ao NAS que aplica então à interface de discagem.

Nota: Para o ISDN, você deve usar o **método de usuário** e você deve configurar Perfis virtuais no roteador. Estes são descritos para o Cisco IOS Software Release 11.3 em [configurar Perfis virtuais](#).

[Pré-requisitos](#)

Requisitos

Não existem requisitos específicos para este documento.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware.

- Cisco IOS Software Release 11.1 ou Mais Recente (defina Listas de acesso no roteador)
- Cisco IOS Software Release 11.3 ou Mais Recente (defina Listas de acesso no server)
- Cisco Secure ACS UNIX ou Cisco Secure ACS for Windows 2.x ou radius livingston ou radius da merit

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se você estiver trabalhando em uma rede ativa, certifique-se de que entende o impacto potencial de qualquer comando antes de utilizá-lo.

Convenções

Para obter mais informações sobre convenções de documento, consulte as [Convenções de dicas técnicas Cisco](#).

Diagrama de Rede

Esta rede é usada em ambos os exemplos:

Defina listas de acessos numeradas no roteador

Configuração do roteador

[Comandos para outros Cisco IOS Software Release](#)

Nota: Para usar estes comandos, remova os comandos em corajoso da configuração acima e cole estes comandos dentro, como ditado por seu Cisco IOS Software Release.

[Cisco IOS Software Release 11.3.3.T com 12.0.5.T](#)

```
aaa authentication login default radius local
aaa authentication ppp default if-needed radius local
aaa authorization network default radius
```

[Cisco IOS Software Release 11.1 com 11.3.3.T](#)

```
aaa authentication login default radius
aaa authentication ppp default if-needed radius
aaa authorization network radius
```

[Configurações do servidor - Listas de acesso no roteador](#)

Este procedimento envolve a configuração da lista de acessos própria no roteador. O servidor Radius é configurado com o access list number que é aplicado. Quando o atendimento autentica, o servidor Radius retorna o access list number ao NAS, que aplica então a lista de acessos correspondente.

[Configuração do servidor - Cisco Secure ACS for Windows 2.X - RAI0](#)

Siga as etapas abaixo:

1. Nas configurações de usuário, preencha o nome e as senhas.
2. Nas configurações de grupo, verifique: Atributo 6 - **Framed** Atributo 7 - **PPP** Atributo 11 - **ID de filtro**. Na área abaixo, tipo **101.in** **Nota:** O atributo 11 especifica que a lista de acessos 101 é aplicada. Assegure-se de que o access-list 101 esteja configurado no roteador.

[Configuração do servidor - RADIUS UNIX do Cisco Secure ACS](#)

```

rtp-evergreen# ./ViewProfile -p 9900 -u chaprtr
User Profile Information
user = chaprtr{
profile_id = 51
profile_cycle = 1
radius=Cisco {
check_items= {
2="chaprtr"
}
reply_attributes= {
6=2
7=1
11=101.in } } }

```

Nota: O atributo 11 especifica que o access-list 101 é aplicado. Assegure-se de que o access-list 101 esteja configurado no roteador.

[Configuração do servidor - Radius livingston](#)

```

chaprtr Password = chaprtr
User-Service-Type = Framed-User,
Framed-Protocol = PPP,
Framed-Filter-Id = 101.in

```

Nota: Isto especifica que o access-list 101 é aplicado. Assegure-se de que o access-list 101 esteja configurado no roteador.

[Debug de Exemplo de Roteador](#)

Defina Listas de acesso no server

Nota: As declarações de rota não têm que ser passadas para baixo do server ao roteador; o usuário do seletor pegara normalmente as rotas do roteador. A presença das declarações de rota no roteador depende sobre se as rotas devem ser passada para baixo do server ou ser pegadas do roteador. Contudo, neste exemplo, a lista de acessos e as declarações de rota são passadas para baixo.

```
ip route 9.9.9.0 255.255.255.0 11.11.11.12
ip route 15.15.15.0 255.255.255.0 12.12.12.13
```

Nesta configuração de exemplo, passar as rotas para baixo do server é somente para fins da ilustração.

Configuração do roteador

```

```

Configuração do servidor - Cisco Secure ACS for Windows 2.x - RAI0

Conclua estes passos:

1. Nas configurações de usuário, preencha o nome e as senhas.
2. Nas configurações de grupo, verifique: Atributo 6 - Framed Atributo 7 - PPP
3. Sob atributos de raio Cisco, verifique o par AV [009\001] e datilografe o seguinte texto na

caixa embaixo:
ip:route#1=9.9.9.9 255.255.255.255 11.11.11.12
ip:route#2=15.15.15.15 255.255.255.255 12.12.12.13
ip:route#3=15.15.15.16 255.255.255.255 12.12.12.13
ip:inacl#1=permit icmp 1.1.1.0 0.0.0.255 9.9.9.0 0.0.0.255 ip:inacl#2=permit tcp 1.1.1.0
0.0.0.255 15.15.15.0 0.0.0.255 *!--- The access-list to be applied is specified. !--- Note
that the number after inacl# increments for !--- each line of the access-list.*

Configuração do servidor - Radius da merit

Nota: Este as configurações são válidas para as versões da versão 3.6b ou mais recente dos radius da merit que apoiam pares Cisco AV.

```
chaprtr Password = "chaprtr",  
Service-Type = Framed,  
Framed-Protocol = PPP,  
Framed-IP-Address = 255.255.255.254  
Cisco:Avpair="ip:route#1=9.9.9.9 255.255.255.255 11.11.11.12"  
Cisco:Avpair="ip:route#2=15.15.15.15 255.255.255.255 12.12.12.13"  
Cisco:Avpair="ip:route#3=15.15.15.16 255.255.255.255 12.12.12.13"  
Cisco:Avpair="ip:inacl#1=permit icmp 1.1.1.0 0.0.0.255 9.9.9.0 0.0.0.255"  
Cisco:Avpair="ip:inacl#2=permit tcp 1.1.1.0 0.0.0.255 15.15.15.0 0.0.0.255" !--- The access-list  
to be applied is specified. ! --- Note that the number after inacl# increments for each line of  
the access-list.
```

[Debug de Exemplo de Roteador](#)

A configuração do usuário RADIUS para debugar abaixo era:

```
RADIUS user password = "radiususer",  
Service-Type = Framed,  
Framed-Protocol = PPP,  
Framed-IP-Address = 255.255.255.254  
cisco-avpair = "ip:route#1=9.9.9.0 255.255.255.0 11.11.11.12"  
cisco-avpair = "ip:route#2=15.15.15.0 255.255.255.0 12.12.12.13"  
cisco-avpair = "ip:inacl#1=permit icmp 1.1.1.0 0.0.0.255 9.9.9.0 0.0.0.255 log"  
cisco-avpair = "ip:inacl#2=permit tcp 1.1.1.0 0.0.0.255 15.15.15 .0 0.0.0.255 log"
```

```

Comandos debug

- **debugar a autenticação aaa** - Indica a informação sobre a autenticação de AAA.
- **debug aaa authorization** - Indica a informação sobre a autorização de AAA.
- **debugar o aaa por usuário** - Informação dos indicadores sobre os ajustes de configuração por usuário no roteador ou servidor de acesso que são enviados de um servidor AAA.
- **debugar o raio** - Indica a informação detalhada sobre debug associado com o RAI0.
- **debug ppp negotiation** - Exibe pacotes PPP transmitidos durante a inicialização de PPP, em que as opções de PPP são negociadas.

Para a informação de Troubleshooting, veja [Listas de acesso do Troubleshooting em interfaces de discagem](#).
