O ASA IKEv2 debuga para o VPN de Site-para-Site com PSK

Índice

Introdução

Este documento fornece a informação para compreender que IKEv2 debuga na ferramenta de segurança adaptável (ASA) quando a chave preshared (PSK) é usada.

Pré-requisitos

Requisitos

Não existem requisitos específicos para este documento.

Componentes Utilizados

Este documento não se restringe a versões de software e hardware específicas.

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto potencial de qualquer comando.

Convenções

Consulte as Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos.

Edição de núcleo

O intercâmbio de pacotes em IKEv2 é radicalmente diferente do que estava em IKEv1. Considerando que em IKEv1 havia uma troca phase1 claramente delimitada que consistisse nos pacotes 6 seguidos por uma troca da fase 2 que consistido 3 pacotes, a troca IKEv2 é variável. Para informações mais detalhadas sobre das diferenças e de uma explicação do intercâmbio de pacotes, refira a eliminação de erros do intercâmbio de pacotes IKEv2 e do nível de protocolo.
