[Informações Relacionadas](#)

[Introdução](#)

Na maioria dos casos, um PIX remoto que se conecta a um PIX central não usa a tradução de endereço de rede (NAT). Em vez disso, o PIX remoto usa um endereço IP estático externo. Por exemplo, quando um PIX central que executa a versão 7.x ou posterior se conecta a um PIX remoto que usa NAT, ele se torna igual a um home office pequeno como um PIX 501 ou 506 conectado a um cabo ou modem DSL usando Dynamic Host Control Protocol (DHCP). O PIX 7.x ou posterior e o Cisco Adaptive Security Device Manager (ASDM) não são executados em um PIX 501 ou 506. Consequentemente, para este exemplo, presume-se que o PIX remoto com DHCP e NAT é um PIX 501 ou 506 que executa o código do 6.x. Essa configuração permite que o PIX central aceite conexões IPSec dinâmicas. O PIX remoto usa o NAT para juntar-se aos dispositivos confidencialmente endereçados atrás dele à rede confidencialmente endereçada atrás do PIX central. O PIX remoto pode iniciar conexões ao PIX central (ele conhece o ponto de extremidade), mas o PIX central não pode iniciar conexões ao PIX remoto (ele não conhece o ponto de extremidade).

Nesse exemplo de configuração, Tiger é o PIX remoto, e Lion é o PIX central. Desde que o endereço IP de Um ou Mais Servidores Cisco ICM NT do tigre é desconhecido, você deve configurar o leão para aceitar dinamicamente conexões em qualquer lugar de conhecer o wild-card, pre-shared key. O tigre sabe que tráfego deve ser cifrada (porque é especificado pela lista de acesso) e onde o ponto final de leão é encontrado. O Tiger deve iniciar a conexão. Os ambos os lados executam o NAT e 0 nat a fim contornar o NAT para o tráfego de IPSec.

Além, o usuário remoto nesta configuração conecta ao PIX central (leão) que usa o Cisco VPN Client 4.x. O usuário remoto não pode conectar ao PIX remoto (tigre) desde que os ambos os lados têm dinamicamente endereços IP atribuídos e não sabe onde enviar o pedido.

Refira [configurar o PIX ao IPSec dinâmico para estático PIX com NAT e Cisco VPN Client](#) a fim aprender uma encenação mais mais ou menos idêntica em PIX 6.x com Cisco VPN Client 3.x.

Pré-requisitos

Requisitos

Não existem requisitos específicos para este documento.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

- Liberação de Software do firewall Cisco PIX 7.x e mais tarde (PIX central)
- Liberação de Software do firewall Cisco PIX 6.3.4 (PIX remoto)
- Versão Cliente VPN Cisco 4.x

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto potencial de qualquer comando.

Convenções

Consulte as [Convenções de Dicas Técnicas da Cisco](#) para obter mais informações sobre convenções de documentos.

Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

Nota: Use a [Command Lookup Tool](#) ([somente clientes registrados](#)) para obter mais informações sobre os comandos usados nesta seção.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:

Configurações

Este documento utiliza as seguintes configurações:

Verificar

Use esta seção para confirmar se a sua configuração funciona corretamente.

A [Output Interpreter Tool \(apenas para clientes registrados\)](#) (OIT) suporta determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Nota: Você deve executar os **comandos clear** no modo de configuração.

- **clear crypto ipsec sa** — Restaura as associações IPsec depois que falhas de tentativa negociar um túnel VPN.
- **clear crypto isakmp sa** — Restaura as associações de segurança do Internet Security Association and Key Management Protocol (ISAKMP) depois que falhas de tentativa negociar um túnel VPN.
- **show crypto engine ipsec** — Indica as sessões de criptografia.

Troubleshooting

[Chaves pré-compartilhada idênticas](#)

Se o túnel de IPsec do LAN para LAN (L2L) não é estabelecido, verifique se a chave pré-compartilhada para o DefaultRAGroup e a chave pré-compartilhada para o DefaultL2LGroup sejam a mesma. Se este é o caso, a seguir o PIX/ASA termina o túnel no DefaultRAGroup primeiramente e o túnel L2L é então provável falhar. Esteja certo que as chaves pré-compartilhada para os dois grupos de túneis do padrão são diferentes.

[Comandos para Troubleshooting](#)

A [Output Interpreter Tool \(apenas para clientes registrados\)](#) (OIT) suporta determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Nota: Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar comandos debug.

- **IPsec do debug crypto** — Usado para ver se um cliente negocia a parte IPsec da conexão de VPN.
- **[/level] do isakmp do debug crypto** — Usado para ver se os pares negociam a parcela ISAKMP do VPN.

[Exemplos de emissor do debug correto](#)

Estes são exemplos de algum comando de debug correto output:

- [PIX central \(7.0.0\)](#)
- [PIX remoto NAT dinâmico \(6.3.4\)](#)
- [Cliente VPN 4.0.5 no PIX central 7.0](#)

[PIX central \(7.0.0\)](#)
