Introdução

Este documento descreve como configurar uma conexão SXP (protocolo de intercâmbio do grupo de segurança) entre ISE (Identity Services Engine) e um ASAv (ferramenta de segurança adaptável virtual).

SXP é o protocolo de intercâmbio SGT (etiqueta do grupo de segurança) usado por TrustSec para propagar o IP aos mapeamentos SGT aos dispositivos de TrustSec. SXP foi desenvolvido para permitir as redes que incluem os dispositivos de terceira parte ou os dispositivos Cisco do legado que não apoiam a colocação de etiquetas inline SGT para ter capacidades de TrustSec. SXP é um peering protocol, um dispositivo atuará como um orador e o outro como um ouvinte. O orador SXP é responsável por enviar os emperramentos IP-SGT e o ouvinte é responsável por recolher estes emperramentos. A conexão SXP usa a porta TCP 64999 como o protocolo de transporte subjacente e o MD5 para a integridade de mensagem/autenticidade.

SXP foi publicado como um esboço de IETF no seguinte link:

<https://datatracker.ietf.org/doc/draft-smith-kandula-sxp/>

Pré-requisitos

Requisitos

Matriz de compatibilidade de TrustSec:

<http://www.cisco.com/c/en/us/solutions/enterprise-networks/trustsec/solution-overview-listing.html>

Componentes Utilizados

ISE 2.3

ASAv 9.8.1

ASDM 7.8.1.150

Diagrama de Rede

Endereços IP

ISE: 14.36.143.223

ASAv: 14.36.143.30

Configuração inicial

Dispositivo de rede ISE

Registro ASA como um dispositivo de rede

>Add de WorkCenters > de TrutSec > de componentes > de dispositivos de rede

Server Group Setup

Server Group Name:

>Add dos Grupos de servidores AAA

AAA Server Groups							Add
Server Group	Protocol	Accounting Mode	Reactivation Mode	Dead Time	Max Failed Attempts	Realm Id	
LOCAL	LOCAL						Edit
							Delete

- Grupo de servidores AAA: <Group Name>
- Permita a autorização dinâmica

AAA Server Group:

Protocol: 

Realm-id:

Accounting Mode: Simultaneous Single

Reactivation Mode: Depletion Timed

Dead Time: minutes

Max Failed Attempts:

Enable interim accounting update

Update Interval: Hours

Enable Active Directory Agent mode

ISE Policy Enforcement

Enable dynamic authorization

Dynamic Authorization Port:

Use authorization only mode (no common password configuration required)

VPN3K Compatibility Option 

Specify whether a downloadable ACL received from RADIUS should be merged with a Cisco AV-Pair ACL.

Do not merge

Place the downloadable ACL after Cisco AV-Pair ACL

Place the downloadable ACL before Cisco AV-Pair ACL

Adicionar o server ao grupo de servidor

Server no > Add selecionado do grupo

Importação PAC transferida do ISE

Configuração > Firewall > identidade por TrustSec > por grupo de servidor Setup > importação PAC...

The 'Server Group Setup' dialog box features a title bar with the text 'Server Group Setup'. Below the title bar, there is a label 'Server Group Name:' followed by a text input field containing the IP address '14.36.143.223' and a blue dropdown arrow icon. To the right of the input field is a 'Manage...' button. Below these elements are two buttons: 'Refresh Environment Data' and 'Import PAC...'.

- Senha: Cisc0123

The 'Import PAC' dialog box has a title bar with the text 'Import PAC'. It contains three input fields: 'Filename:' with the path '/Users/depillsb/Downloads/ASAv(1).pac' and a 'Browse...' button; 'Password:' with a masked field of ten dots; and 'Confirm Password:' with a masked field of ten dots. At the bottom, there are three buttons: 'Help', 'Cancel', and 'Import'.
