[Informações Relacionadas](#)

[Introdução](#)

Esta seção do original principal do [fax de T.37 do FAX over IP store and forward \(guarda e passa adiante\)](#) focaliza no offramp que envia store and forward (guarda e passa adiante). O offramp T.37 é o processo por que um gateway aceita um email, os conversos que enviam por correio eletrônico a um fax, e o envia então para fora através de uma porta de voz.

Este original contém a configuração necessária necessária obter a característica operacional. A seção da [pesquisa de defeitos](#) vai sobre os **comandos debug** úteis e como interpretar seu significado. A topologia usada é mostrada na seção do [diagrama da rede](#).

[Pré-requisitos](#)

[Requisitos](#)

As exigências específicas para este original são especificadas na seção principal, [fax de T.37 do FAX over IP store and forward \(guarda e passa adiante\)](#).

[Componentes Utilizados](#)

Este documento não se restringe a versões de software e hardware específicas.

As informações neste documento foram criadas a partir de dispositivos em um ambiente de laboratório específico. Todos os dispositivos utilizados neste documento foram iniciados com uma configuração (padrão) inicial. Se a sua rede estiver ativa, certifique-se de que entende o impacto

potencial de qualquer comando.

Convenções

For more information on document conventions, refer to the [Cisco Technical Tips Conventions](#).

Configuração

Nas seções abaixo, os parâmetros da configuração de software de Cisco IOS® relevantes à configuração do fax do offramp são explicados primeiramente, e a configuração 5300 é indicada então com as notas mais adicionais que esclarecem as funções de comandos importantes.

Diagrama de Rede

Este documento utiliza a instalação de rede mostrada no diagrama abaixo.

Parâmetros de configuração

Estão abaixo os comandos comuns usados na configuração de OffRamp do gateway:

Parâmetros imperativos:	
fax-correio do tipo de interface do fax	Permite a funcionalidade de T.37 para o gateway. Exige uma repartição nos 5300, mas não os 5350 ou os 5400.
o mta recebe pseudônimos	Define um hostname a ser usado como um pseudônimo para o gateway OffRamp. Até dez podem ser definidos. O gateway aceita o correio recebido se o nome de host de destino do correio de entrada combina um pseudônimo.
o mta recebe máximo-receptores	Define o número máximo de receptores simultâneos do Simple Mail Transfer Protocol (SMTP) tratados por este gateway.
informação-tipo entrante fax do chamar-número do offramp de aplicativo do	O comando application offramp refere o comando call application voice name . O <i>nome</i> combina o offramp. O comando incoming called-number é usado combinar este par do email multimídia sobre IP (MMoIP) de entrada. O comando information-type fax identifica os

número MMoIP da voz do dial peer	atendimentos associados com este par como sendo transmissões de fax.
localização do nome de voz de aplicativo de chamada	Define um nome global para o aplicativo (offramp, neste caso) e seu lugar (em um servidor TFTP externo, neste caso).
Parâmetros opcionais:	
o fax envia o transmitir-subscritor	Define a identificação de assinante de transmissão (TSI).
o fax envia o fax do centro-encabeçame nto envia o fax do esquerdo-encabeçame nto envia o direito-encabeçame nto	As opções são: {\$a\$ \$d\$ \$p\$ \$s\$ \$t\$ corda} <ul style="list-style-type: none"> • \$a\$ — Data • \$d\$ — Endereço de destino • \$s\$ — Endereço do remetente • \$p\$ — Contagem da página • \$t\$ — Tempo de transmissão Use o argumento da <i>corda</i> neste comando introduzir uma sequência de caracteres de texto personalizada.
o fax envia o coverage	As opções são: <ul style="list-style-type: none"> • permita — Permite o gateway OffRamp de enviar uma capa. • comentário — Adds personalizou comentários à capa. • mostra-detalle — Imprime o encabeçamento inteiro do email como parte da capa.
o mta recebe gerencie-mdn	Permite o gateway OffRamp de responder aos pedidos da notificação de disposição de mensagem (MDN).

[Configuração de OffRamp](#)

Os email foram enviados de Outlook Express ao gateway OffRamp (vdtl-5350-8a) e enviados a um número de destinos.

```

[Troubleshooting](#)

Este original é uma continuação do [OnRamp faxing de T.37](#). A maioria das referências de comandos alistadas nesse original são usadas igualmente para o OffRamp faxing. Refira esse original para mais informação.

[Falhado debuga](#)

Estes são os logs do **comando debug de uma** chamada de fax mal sucedida. Este **comando debug** foi emitido em um gateway de Cisco 5350, que atuasse como o gateway de fax do offramp para a rede neste exemplo.
