Содержание

Введение

Когда основной режим и предварительный общий ключ (PSK) используются, этот документ предоставляет сведения для понимания отладок на программном обеспечении Cisco IOS.

Этот документ также предоставляет сведения о том, как преобразовать определенные линии отладки в конфигурации.

Эти темы не обсуждены:

- Проходящий трафик после туннеля был установлен
- Базовые понятия IPSec или Протокола IKE

Базовая проблема

IKE и отладки IPSec имеют тенденцию становиться загадочными. Центр технической поддержки Cisco (TAC) часто использует эти дефекты для понимания, где расположена проблема с **установлением** VPN-туннеля IPSec.

Сценарий

Когда сертификаты используются для аутентификации, основной режим, как правило, используется между туннелями между локальными сетями (LAN-to-LAN), или в случае удаленного доступа (ezvpn).

Те отладки от устройства Cisco IOS, которое выполняется 15.2 (1) выпуск ПО T.

Два главных сценария описаны в этом документе:

- Сторона инициатора IOS
- Сторона респондента IOS

В этом документе основанный на VTI туннель между двумя узлами установлен, на основе IPv6.

> **Примечания:**
>
> Используйте Средство поиска команд Command Lookup Tool (только зарегистрированные клиенты) для получения дополнительных сведений о командах, используемых в этом документе.
>
> Обратитесь к документу Важная информация о командах отладки, прежде чем использовать команды debug.

Используемые отладки

- **debug crypto isakmp**
- **debug crypto ipsec**
- **debug crypto kmi**

Настройка маршрутизатора IOS

Крипто - настройка

Другая сторона

Отладка

Сторона респондента IOS

Сообщение 1 (MM1) основного режима

Первоначальное предложение по IKE включает:

- Шифрование
- Хеширование
- Группа Diffie-Hellman (DH)
- Срок действия

Связанная конфигурация:

Сообщение 2 (MM2) основного режима - передача нашего ответа

Сообщение 3 (MM3) основного режима

Включает:

- Обнаружение Технологии NAT
- Часть первая обмена DH

Сообщение 4 (MM4) основного режима

Включает:

- Информационное наполнение обнаружения NAT
- Продолжение обмена DH

Сообщение 5 (MM5) основного режима - инициатор передает его идентичность

Включает:

- Локальная идентификационная информация
- Ключ

Сообщение 6 (MM6) основного режима - респондент передает его идентичность. Завершение фазы 1.

Включает:

- Удаленная идентичность передана от узла
- Окончательное решение относительно туннельной группы для выбора

Связанная конфигурация:

Сообщение 1 (QM1) быстрого режима
