Введение

Этот документ иллюстрирует Конфигурацию IPSec со следующими элементами: криптокарты применились к нескольким интерфейсам на PIX; расширенная проверка подлинности (XAUTH) Клиентов VPN; динамическое назначение частного IP-адреса из пула для клиентов VPN; функциональность команды `and nat 0 access-list` позволяет узлам локальной сети использовать приватные IP-адреса для удаленных пользователей и при этом получить NAT-адрес от PIX для доступа к ненадежным сетям.

Данная конфигурация предназначена для решения следующих задач.

- Аутентификация удаленного пользователя по базе данных TACACS+.
- Динамически назначает частный IP-адрес удаленному пользователю.
- Зашифруйте поток данных от удаленного пользователя на концентратор PIX.
- Шифровать трафик от концентратора PIX к LAN.

Примечание: Во время создания этого документа при проверке подлинности вызова `xauth` неверный логин для сервера проверки подлинности, авторизации и учета (AAA) удалит созданные ассоциации безопасности (SAs).

Перед началом работы

Условные обозначения

[Дополнительные сведения об условных обозначениях см. в документе Технические рекомендации Cisco. Условные обозначения.](#)

Предварительные условия

Для данного документа отсутствуют предварительные условия.

Используемые компоненты

При разработке и тестировании этой конфигурации использовались следующие версии программного и аппаратного обеспечения.

- Cisco IOS® Software Version 12.2.8.T или более поздней
- Версия IOS 6.1 (1) PIX Cisco
- Cisco VPN Client 3.5

Сведения, содержащиеся в данном документе, были получены с устройств в специальной лабораторной среде. Все устройства, описанные в данном документе, были запущены с конфигурацией по умолчанию. При работе с реальной сетью необходимо полностью осознавать возможные результаты использования всех команд.

Настройка

В этом разделе содержатся сведения о настройке функций, описанных в этом документе.

Примечание: [Поиск дополнительной информации о командах в данном документе можно выполнить с помощью средства "Command Lookup" \(Поиск команд\) \(только для зарегистрированных клиентов\).](#)

Схема сети

В данном документе используется сетевая установка, показанная на следующей схеме.

Конфигурации

В данном документе используются следующие конфигурации.

- [Конфигурация PIX концентратора](#)

- [Конфигурация внутреннего маршрутизатора](#)
- [Конфигурация клиента VPN](#)

Конфигурация клиента VPN

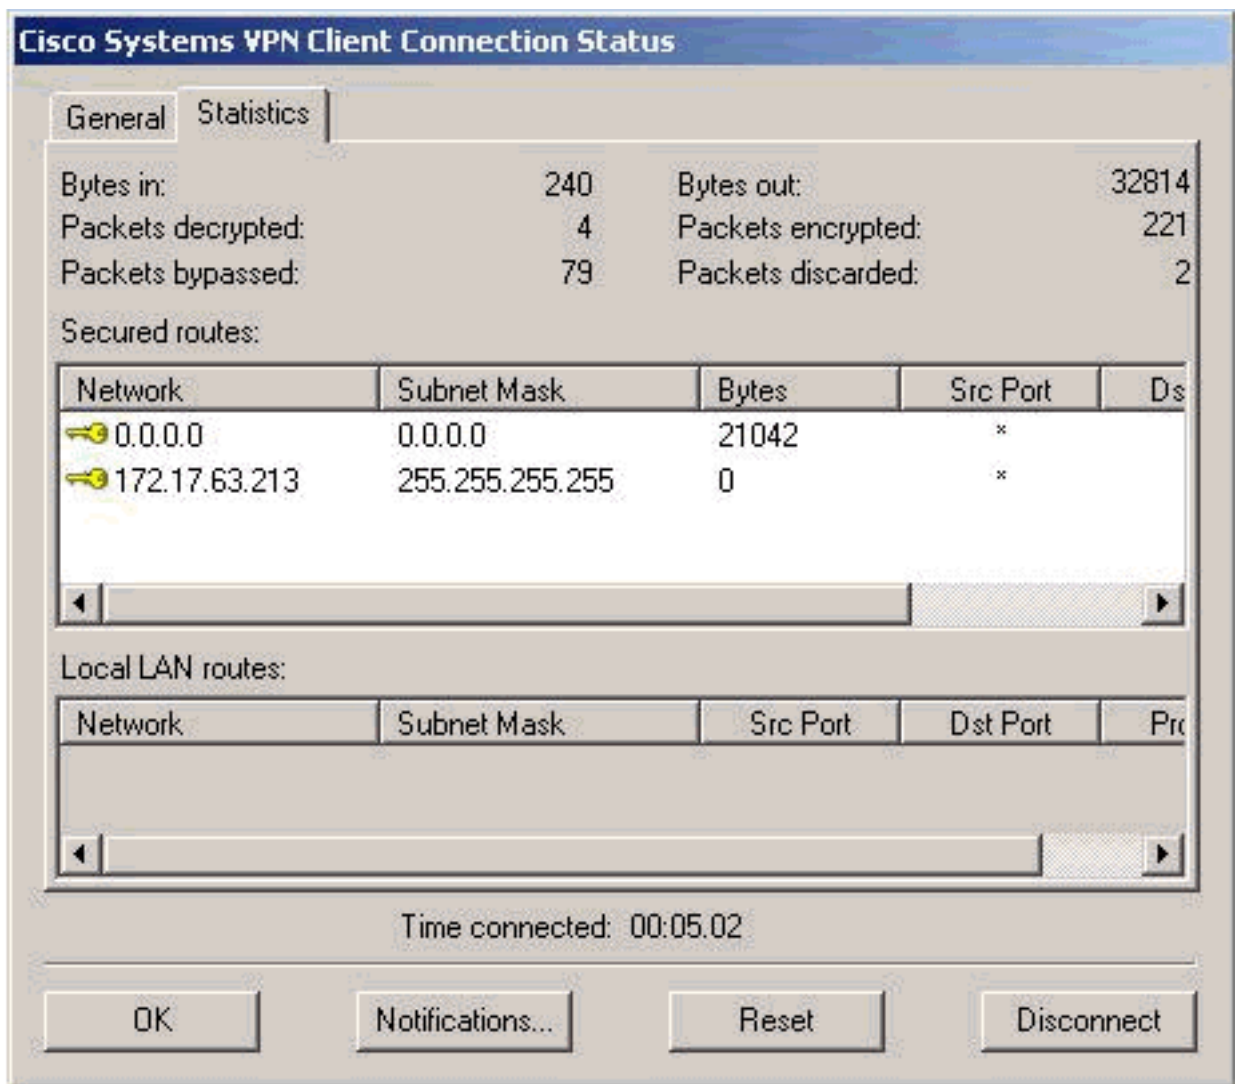

Следующие шаги описывают конфигурацию для Клиента VPN.

1. После начала работы с клиентом VPN дважды щелкните изображение желтого замка, расположенное на панели задач, и войдите в систему, нажав кнопку Connect

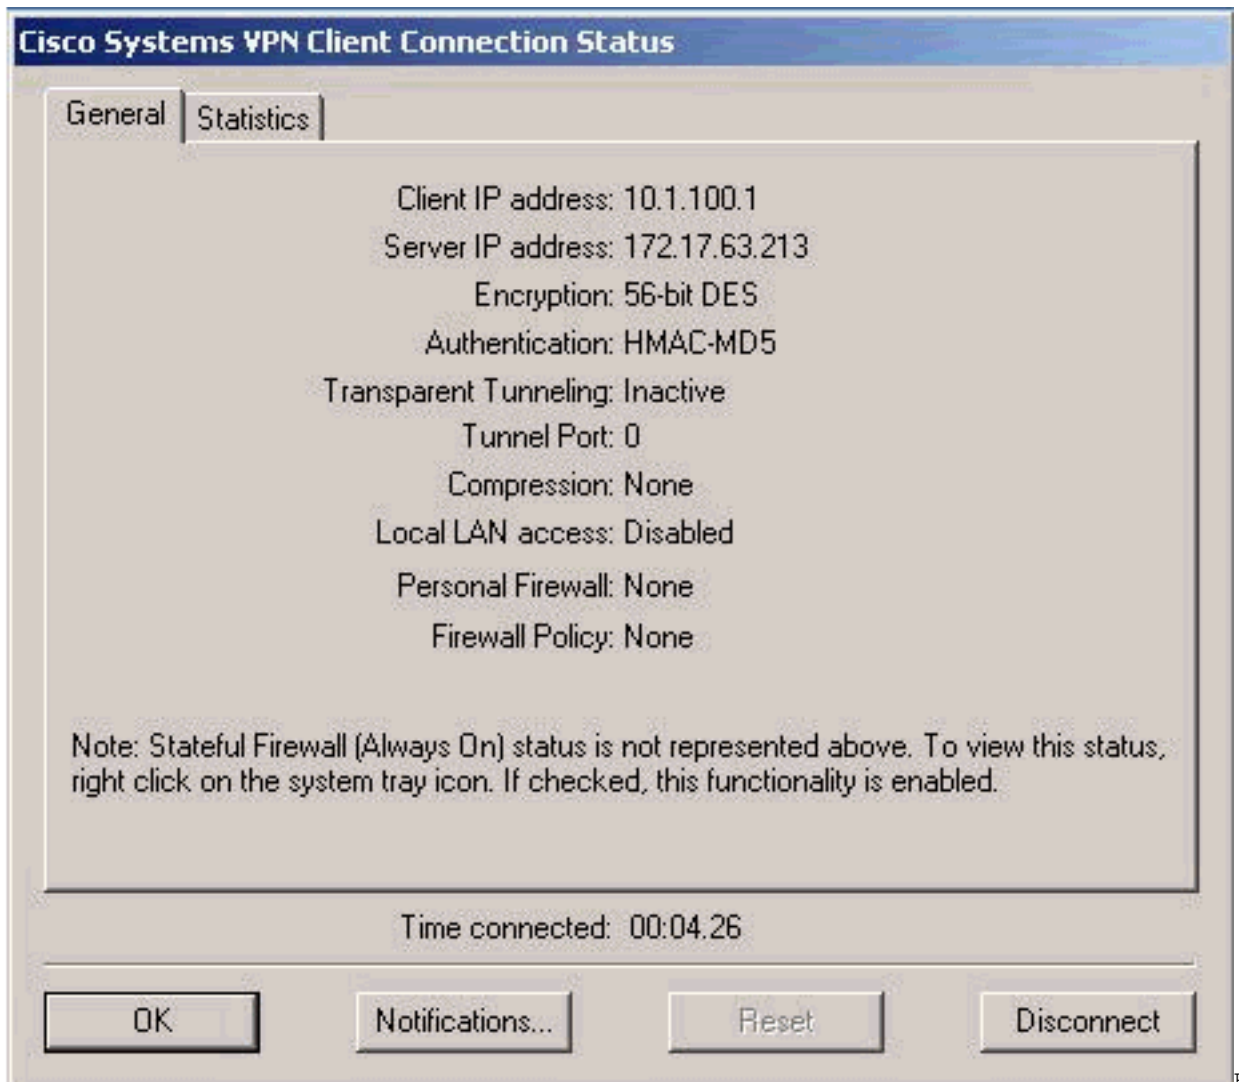

(Установить связь).

2. Чтобы просмотреть статистику подключения, щелкните желтый значок замка, когда туннель будет установлен, и появится следующее

окно.

3. Выберите Вкладку Общие для получения информации о настройке клиента

VPN.

Проверка

В этом разделе содержатся сведения, которые помогают убедиться в надлежащей работе конфигурации.

Некоторые команды `show` поддерживаются Средством интерпретации выходных данных (только зарегистрированные клиенты), которое позволяет просматривать аналитику выходных данных команды `show`.

Команды показа могут быть выполнены на PIX и маршрутизаторе.

- команда `show crypto isakmp sa` отображает сопоставления безопасности (SA), соответствующие первому этапу.
- `show crypto ipsec sa` - Показывает, что сопоставления безопасности Фазы 1 и прокси, encaps, шифруют, decap, и дешифруют информацию.
- `show crypto engine connections active` (только для маршрутизаторов) – Показывает текущие соединения и информацию относительно зашифрованных и расшифрованных пакетов

Устранение неполадок

В этом разделе описывается процесс устранения неполадок конфигурации.

Прежде, чем делать попытку любой из следующих команд отладки, посмотрите [раздел Важные сведения о командах отладки](#). Также посмотрите следующие выходные данные отладки для получения дополнительной информации.

- [Отладочные данные для PIX концентратора](#)
- [Отладка внутреннего маршрутизатора](#)
- [Журнал клиента VPN](#)

Удаление ассоциаций безопасности должно быть выполнено на обоих соединениях. Команды PIX выполняются в режиме настройки конфигурации.

- команда `"clear crypto isakmp sa"` - (PIX) стирает сопоставления безопасности (SA), соответствующие первому этапу.
- `clear crypto ipsec sa` - (PIX) удаление связей безопасности фазы 2.
- `clear crypto isakmp` - (маршрутизатор) удаление связей безопасности фазы 1.
- `clear crypto sa` - (маршрутизатор) удаление связей безопасности фазы 2.

Следующие отладки должны выполняться на обоих узлах IPSec.

- команда `debug crypto isakmp` (маршрутизатор и PIX) отображает ошибки на первом этапе.
- `debug crypto ipsec` - (Маршрутизатор и PIX) ошибки Показов во время Фазы 2.
- `debug crypto engine` - (только маршрутизатор) вывод данных модуля криптографии.

Отладочные данные для PIX концентратора
