简介

本文档介绍如何在FDM管理的FTD上配置VRF感知路由的站点到站点VPN。

先决条件

要求

Cisco 建议您了解以下主题：

- 对VPN的基本了解
- 基本了解虚拟路由和转发(VRF)
- 使用FDM的经验

使用的组件

本文档中的信息基于以下软件和硬件版本：

- 思科FTDv版本7.4.2
- 思科FDM版本7.4.2
- 思科ASA v版本9.20.3

本文档中的信息都是基于特定实验室环境中的设备编写的。本文档中使用的所有设备最初均采用原始(默认)配置。如果您的网络处于活动状态,请确保您了解所有命令的潜在影响。

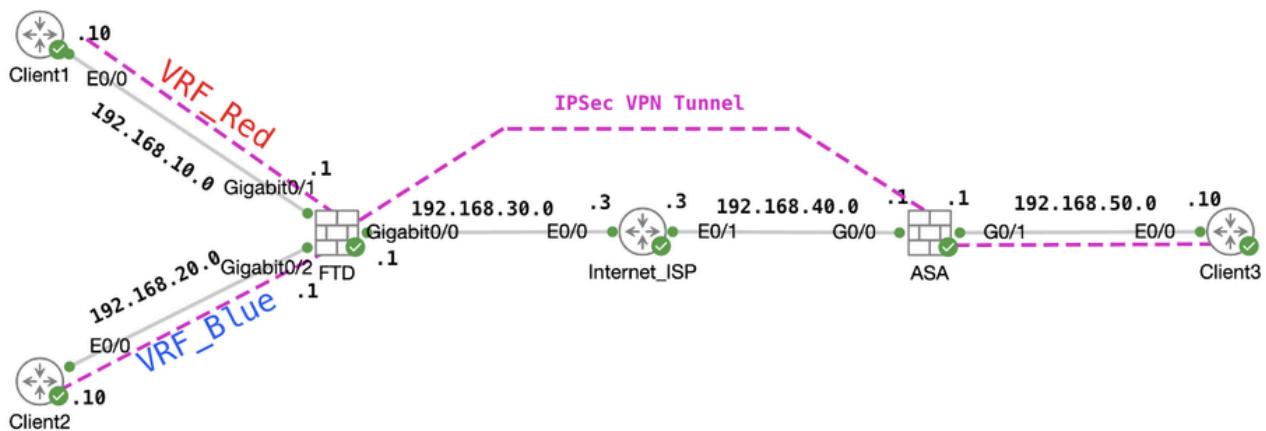

背景信息

通过Firepower设备管理器(FDM)上的虚拟路由和转发(VRF)，您可以在单个Firepower威胁防御(FTD)设备上创建多个隔离路由实例。每个VRF实例都作为单独的虚拟路由器运行，具有自己的路由表，从而实现网络流量的逻辑分离，并提供增强的安全性和流量管理功能。

本文档说明如何使用VTI配置VRF感知IPSec VPN。VRF红色网络和VRF蓝色网络位于FTD之后。VRF红色网络中的Client1和VRF蓝色中的Client2将通过IPSec VPN隧道与ASA后面的客户端3通信。

拓扑

配置FTD

步骤1. 必须确保节点间的IP互联初步配置已经适当完成。Client1和Client2使用FTD内部IP地址作为网关。 Client3使用ASA内部IP地址作为网关。

步骤2. 创建虚拟隧道接口。登录FTD的FDM GUI。导航到设备>接口。单击View All Interfaces。

The screenshot shows the Firewall Device Manager interface for a Cisco Firepower Threat Defense for KVM device (ID: FTDv742). The top navigation bar includes links for Monitoring, Policies, Objects, and Device (highlighted with a red box). The main content area displays the device's status and configuration sections. In the bottom right corner, there is a grid of configuration buttons for various system settings like Interfaces, Routing, Updates, System Settings, Smart License, Backup and Restore, Troubleshoot, Remote Access VPN, Advanced Configuration, and Device Administration. The 'Site-to-Site VPN' button is highlighted with a red box.

- 本地VPN访问接口 : demovti (在第2步中创建)
- 远程 IP 地址:192.168.40.1 (这是外部IP地址的对等ASA)

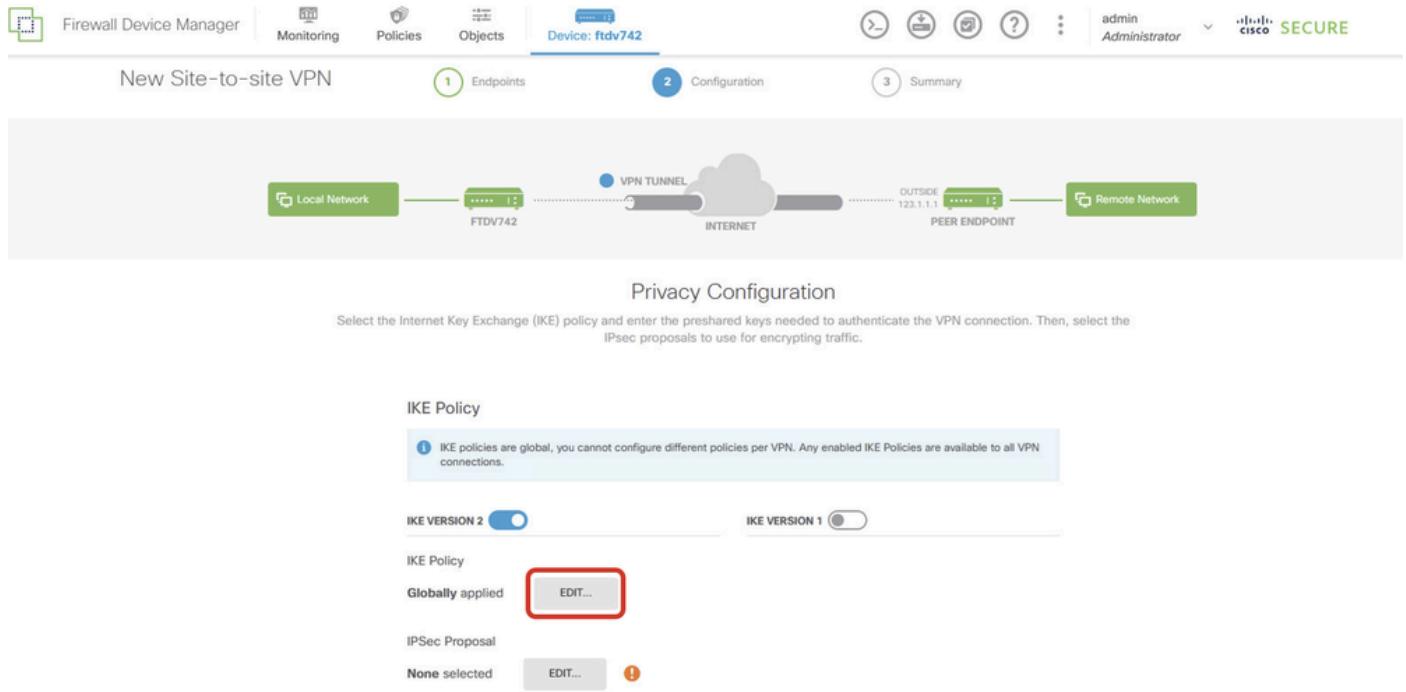

The screenshot shows the 'New Site-to-site VPN' configuration wizard, Step 1: Endpoints. It includes a diagram of the VPN connection between a local network, FTDV742, the Internet, and a remote network. Below the diagram, the 'Define Endpoints' section contains the following fields:

- Connection Profile Name: Demo_S2S
- Type: Route Based (VTI)
- LOCAL SITE: Local VPN Access Interface: demovti (Tunnel1)
- REMOTE SITE: Remote IP Address: 192.168.40.1

Device Summary | Routing

Virtual Route Forwarding (Virtual Routing) Description

You can create multiple virtual routing and forwarding instances, called virtual routers, to maintain separate routing tables for groups of interfaces. Because each virtual router has its own routing table, you can provide clean separation in the traffic flowing through the device. Thus, you can provide support to two or more distinct customers over a common set of networking equipment. You can also use virtual routers to provide more separation for elements of your own network, for example, by isolating a development network from your general-purpose corporate network.

How Multiple Virtual Routers Work

Multiple Virtual Router mode is enabled automatically if there is at least one custom Virtual Router.

SI      192.168.50.0 255.255.255.0 [1/0] is directly connected, demovti
```

步骤3.检验ping测试。

在ping之前，请检查show crypto ipsec sa的计数器 | inc接口 :|encap|decap on FTD。

在本示例中，Tunnel1显示封装和解封的30个数据包。

```
ftdv742# show crypto ipsec sa | inc interface:|encap|decap  
interface: demovti  
    #pkts encaps: 30, #pkts encrypt: 30, #pkts digest: 30  
    #pkts decaps: 30, #pkts decrypt: 30, #pkts verify: 30  
    #PMTUs sent: 0, #PMTUs rcvd: 0, #decapsulated frgs needing reassembly: 0  
ftdv742#
```

Client1成功ping Client3。

```
Client1#ping 192.168.50.10  
Type escape sequence to abort.  
Sending 5, 100-byte ICMP Echos to 192.168.50.10, timeout is 2 seconds:  
!!!!!  
Success rate is 100 percent (5/5), round-trip min/avg/max = 5/299/620 ms
```

Client2成功ping Client3。

```
Client2#ping 192.168.50.10  
Type escape sequence to abort.  
Sending 5, 100-byte ICMP Echos to 192.168.50.10, timeout is 2 seconds:
```

```
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 11/297/576 ms
```

检查的计数器 show crypto ipsec sa | inc interface:|encap|decap 在FTD上，ping成功。

在本例中，Tunnel1在成功ping后显示封装和解封的40个数据包。此外，两个计数器增加10个数据包，匹配10个ping回应请求，表示ping流量成功通过IPSec隧道。

```
ftdv742# show crypto ipsec sa | inc interface:|encap|decap
interface: demovti
#pkts encaps: 40, #pkts encrypt: 40, #pkts digest: 40
#pkts decaps: 40, #pkts decrypt: 40, #pkts verify: 40
#PMTUs sent: 0, #PMTUs rcvd: 0, #decapsulated frgs needing reassembly: 0
```

故障排除

本部分提供了可用于对配置进行故障排除的信息。

可以使用这些debug命令对VPN部分进行故障排除。

```
debug crypto ikev2 platform 255
debug crypto ikev2 protocol 255
debug crypto ipsec 255
debug vti 255
```

您可以使用这些debug命令对路由部分进行故障排除。

```
debug ip routing
```
