Question:

Question:

Why do I want to use CIWUC (Cisco Web Usage Controls) submission tool to submit no-cat URL if the data is already shared and phoned-home via WBNP?

Environment: Cisco Web Security appliance (WSA) with AsyncOS version 6.3 or newer

There are different URL processing priorities for "no-cat" URLs (URLs which are not assigned a pre-defined URL category) that are shared via the WBNP (SensorBase network participation).

The URLs or websites submitted via the online CIWUC submission tool are processed with higher priority than the feedback received via WBNP. Hence if you have any specific URL(s) that you would like it to be categorized sooner, then we recommend submitting the URL(s) via the submission tool.

Other advantage of using submission tool for reporting no-category / mis-categorized URL is that it allows you to pick your suggested URL category as well as to track processing status of the submitted URLs.
