只讀任務組

組態

要在具有只讀訪問許可權的聚合服務路由器9000(ASR9K)上建立使用者，我們需要定義具有只讀許可權的任務組，使用該任務組建立使用者組，然後將新建立的組附加到使用者上。

建立任務組

以下是允許使用者為其運行show命令的任務。

```
RP/0/RSP1/CPU0:ASR9000# show run taskgroup taskgroup_read_only
taskgroup taskgroup_read_only
  task read fr
  task read li
  task read aaa
  task read acl
  task read atm
  task read bfd
  task read bgp
  task read cdp
  task read cef
  task read cgn
  task read eem
  task read nps
  task read pbr
  task read ppp
  task read qos
  task read rib
  task read rip
  task read sbc
  task read ancp
  task read bcdl
```

```
task read boot
task read diag
task read dwdm
task read hdlc
task read hsrp
task read ipv4
task read ipv6
task read isis
task read lisp
task read lpts
task read ospf
task read ouni
task read rcmd
task read snmp
task read vlan
task read vpdn
task read vrrp
task read admin
task read eigrp
task read l2vpn
task read bundle
task read crypto
task read fabric
task read static
task read sysmgr
task read system
task read tunnel
task read drivers
task read logging
task read monitor
task read mpls-te
task read netflow
task read network
task read pos-dpt
task read firewall
task read mpls-ldp
task read pkg-mgmt
task read call-home
task read fault-mgr
task read interface
task read inventory
task read multicast
task read route-map
task read sonet-sdh
task read transport
task read ext-access
task read filesystem
task read tty-access
task read config-mgmt
task read ip-services
task read mpls-static
task read route-policy
task read host-services
task read basic-services
task read config-services
task read ethernet-services
```

!

建立使用者組

任務組應用於使用者組。我建立了一個名為 usergroup_read_only

```
RP/0/RSP1/CPU0:ASR9000# show run usergroup usergroup_read_only
usergroup usergroup_ready_only
taskgroup taskgroup_read_only
!
end-group
```

選項1.建立本地使用者

建立一個本地使用者，然後應用該使用者組。

```
RP/0/RSP1/CPU0:ASR9000# show run username tyler
username tyler
group usergroup_read_only
secret 5 $1$wTwU$CdHKzFRJlJ7kDvJa7NWdi.
!
```

驗證

Show命令有效

```
RP/0/RSP1/CPU0:ASR9000# show clock
13:42:03.811 UTC Thu Jun 30 2016
```

```
RP/0/RSP1/CPU0:ASR9000# show run
Building configuration...
!! IOS XR Configuration 5.1.3
!
hostname ASR9000

[output omitted]
```

配置嘗試失敗

無法阻止對配置的訪問，但任何嘗試的配置都將失敗。

建立環回介面等基本配置失敗。

```
RP/0/RSP1/CPU0:ASR9000# conf t
RP/0/RSP1/CPU0:ASR9000(config)# int loopback 103
% This command is not authorized
```

刪除BGP也失敗。

```
RP/0/RSP1/CPU0:ASR9000# configure
RP/0/RSP1/CPU0:ASR9000(config)# no router bgp 65530
% This command is not authorized
```

檢查組分配

登入的使用者是`usergroup_read_only`的成員

```
RP/0/RSP1/CPU0:ASR9000# show user group  
usergroup_read_only
```

檢查任務分配

對於指定的任務，此使用者只能訪問READ。

```
RP/0/RSP1/CPU0:ASR9000# show user tasks  
Task: aaa : READ Task: acl : READ Task: admin : READ Task: ancp : READ  
Task: atm : READ Task: basic-services : READ Task: bcdl : READ Task: bfd : READ Task: bgp :  
READ Task: boot : READ Task: bundle : READ Task: call-home : READ Task: cdp : READ Task: cef  
: READ Task: cgn : READ Task: config-mgmt : READ Task: config-services : READ Task: crypto  
: READ Task: diag : READ Task: drivers : READ Task: dwdm : READ Task: eem : READ Task:  
eigrp : READ Task: ethernet-services : READ Task: ext-access : READ Task: fabric : READ  
Task: fault-mgr : READ Task: filesystem : READ Task: firewall : READ Task: fr : READ Task:  
hdlc : READ Task: host-services : READ Task: hsrp : READ Task: interface : READ Task:  
inventory : READ Task: ip-services : READ Task: ipv4 : READ Task: ipv6 : READ Task: isis :  
READ Task: l2vpn : READ Task: li : READ Task: lisp : READ Task: logging : READ Task: lpts :  
READ Task: monitor : READ Task: mpls-ldp : READ Task: mpls-static : READ Task: mpls-te :  
READ Task: multicast : READ Task: netflow : READ Task: network : READ Task: nps : READ Task:  
ospf : READ Task: ouni : READ Task: pbr : READ Task: pkg-mgmt : READ Task: pos-dpt : READ  
Task: ppp : READ Task: qos : READ Task: rcmd : READ Task: rib : READ Task: rip : READ Task:  
route-map : READ Task: route-policy : READ Task: sbc : READ Task: snmp : READ Task: sonet-  
sdh : READ Task: static : READ Task: sysmgr : READ Task: system : READ Task: transport :  
READ Task: tty-access : READ Task: tunnel : READ Task: vlan : READ Task: vpdn : READ Task:  
vrrp : READ
```
