

CVR100W VPN路由器上的媒體訪問控制 (MAC)地址克隆

目標

MAC地址克隆用於將一台電腦的MAC地址的準確副本複製到另一台電腦。通常，Internet服務提供商(ISP)需要註冊裝置的MAC地址以唯一標識您的裝置，以便對其進行身份驗證。如果您之前在ISP中註冊了任何其他MAC地址，則可以將該MAC地址克隆到CVR100W VPN路由器。您甚至可以將PC的MAC地址克隆到裝置。本文說明如何在CVR100W VPN路由器上克隆MAC地址。

適用的裝置

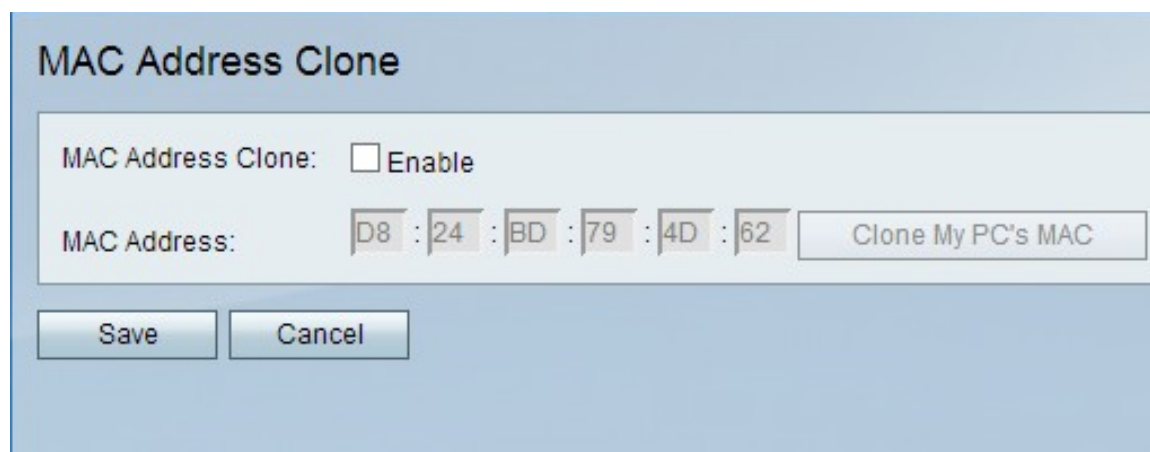

- CVR100W VPN路由器

軟體版本

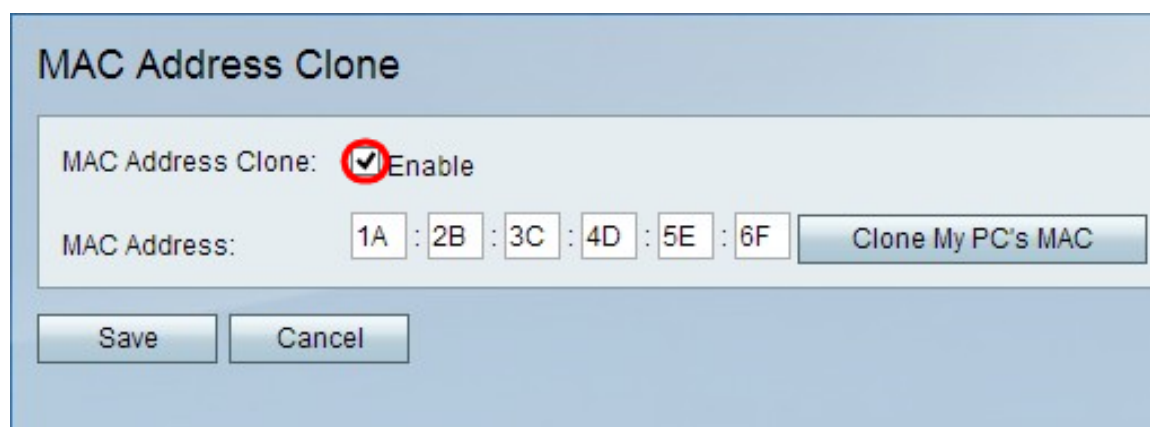

- 1.0.1.19

克隆MAC地址

步驟1.登入到Web配置實用程式並選擇Networking > WAN > MAC Address Clone。此時將開啟「MAC地址克隆」頁：

The screenshot shows the 'MAC Address Clone' configuration page. At the top, the title 'MAC Address Clone' is displayed. Below it, there is a section for 'MAC Address Clone:' with an unchecked checkbox labeled 'Enable'. Underneath, the 'MAC Address:' field contains the hexadecimal value 'D8 : 24 : BD : 79 : 4D : 62'. To the right of this field is a button labeled 'Clone My PC's MAC'. At the bottom of the form, there are two buttons: 'Save' and 'Cancel'.

The screenshot shows the 'MAC Address Clone' configuration page with the 'Enable' checkbox checked. The 'MAC Address:' field now contains the hexadecimal value '1A : 2B : 3C : 4D : 5E : 6F'. The 'Clone My PC's MAC' button is highlighted in blue. The 'Save' and 'Cancel' buttons are still present at the bottom.

步驟2.選中MAC Address Clone欄位中的Enable覈取方塊以啟用Mac地址克隆功能。

步驟3.在「MAC Address」欄位中選擇以下選項之一，以設定CVR100W的WAN埠的MAC地址：

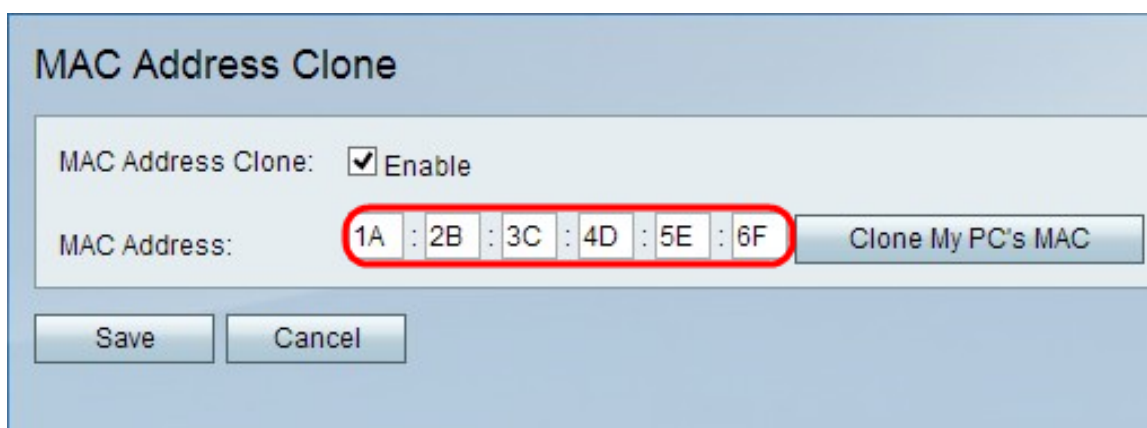

MAC Address Clone

MAC Address Clone: Enable

MAC Address: 1A : 2B : 3C : 4D : 5E : 6F

按一下**Clone My PC's MAC**，將WAN埠的MAC地址設定為與PC的MAC地址相同。

MAC Address Clone

MAC Address Clone: Enable

MAC Address: 1A : 2B : 3C : 4D : 5E : 6F

·在MAC Address欄位中輸入特定地址，以便為WAN埠指定不同的MAC地址。

MAC Address Clone

MAC Address Clone: Enable

MAC Address: 1A : 2B : 3C : 4D : 5E : 6F

步驟4.按一下「**Save**」。
