[解決方案](#)

## 簡介

本文描述如何在新增Cisco Unified Communications Manager(CUCM)和Prime License Manager(PLM)時修復庫存Prime合作保證(PCA)問題。資產顯示裝置為非思科而它是CUCM應用程式或PLM。

作者：Michal Myszor和Andrea Cingolani，思科TAC工程師。

## 必要條件

### 需求

本文件沒有特定需求。

### 採用元件

本文檔適用於：

- PCA 11.X託管服務提供商模式(MSP)
- 託管合作調解履行(HCM-F)10.6.X
- 思科整合通訊管理員(CUCM)11.5.X
- 獨立PLM 11.5.X

本文中的資訊是根據特定實驗室環境內的裝置所建立。文中使用到的所有裝置皆從已清除（預設）的組態來啟動。如果您的網路正在作用，請確保您已瞭解任何指令可能造成的影響。

## 問題

當PCA無法根據SNMP查詢確定裝置型別時，CUCM裝置在資產頁面或裝置檢視中顯示為非思科。

PCA清單顯示：

裝置360檢視上也顯示相同的內容：

## Device 360° View

CUCM-ALFA

10.48.55.29 / 00:50:56:9e:01:9e

NONCISCO

Not Configured / NAT Disabled

10.48.55.29 with type null NOT matched CmDevice 10.48.55.29 with type NONCISCO

```

## 解決方案

檢查SNMP服務是否在UC應用上運行。

**附註：** Cisco CUCM有兩個SNMP服務。

```
SNMP Master Agent[STARTED]
(...)
Cisco CallManager SNMP Service[STOPPED] Service Not Activated
```

Cisco CallManager SNMP服務負責應答思科特定MIB SNMP查詢

PCA 11.6中已修復SNMP服務關閉，建議關閉SNMP服務：

```
11-Sep-2017|12:56:52.752|DEBUG|AccessLevelDiscovery|pool-6-thread-
10|com.cisco.nm.emms.inv.AbstractDiscoveryStage|updateStatusReason|109| Error Index for device
10.48.50.59 is 1003 New Message SNMP timed out. Probable reasons could be: 1. SNMP service not
enabled in the device. 2. SNMP credentials do not match. 3. Firewall settings blocking the port.
Refer the Install and Upgrade guide for the exact ports to be unblocked.
```

## 問題

PLM裝置在資產頁面上顯示為非思科。

## 解決方案

1. 在Inventory頁面中選擇PLM伺服器並暫停裝置。
2. 從PCA清單中刪除裝置。
3. 通過命令列介面(CLI)刪除PLM中新增的任何社群字串：  
**utils snmp config 1/2c community-string delete**

4. 使用作業系統平台憑據(OS PLM CLI)將裝置重新新增到PCA中，並將其新增到HTTP(s)PCA裝置憑據欄位中，如圖所示。

## Add Device

\*IP Address

Note: For multiple IP Addresses, use a unique delimiter: comma, pipe or blank space.  
Example: 10.39.65.1|10.33.68.99
