# **About the Firepower Management Center REST API**

The Firepower Management Center REST API provides a lightweight API to manage a Firepower Management Center.

- About the Firepower Management Center REST API, on page 1
- Enabling the REST API, on page 1
- Best Practices, on page 2
- Additional Resources, on page 2

# **About the Firepower Management Center REST API**

With the release of Cisco's Firepower Management Center REST API, you now have light-weight, easy-to-use option for managing Firepower Threat Defense and legacy Firepower devices through a Firepower Management Center.

The REST API is an application programming interface (API), based on "RESTful" principles, which you can quickly enable on any Firepower Management Center running version 6.1 or higher, and use with a REST client.

After installing a REST client, you can contact the specific Firepower Management Center's REST agent and use standard HTTP methods to access current configuration information, and issue additional configuration parameters.

# **Enabling the REST API**

In Firepower Management Center, the REST API is enabled by default. However, if you are intending to use the REST API, you should confirm that it is enabled.

Note

If you are using UCAPL mode, check that the REST API is not enabled.

#### **Procedure**

- Step 1 Navigate to System>Configuration>REST API Preferences>Enable REST API
- **Step 2** Check the "Enable REST API" checkbox.
- **Step 3** Click "Save". A "Save Successful" dialog will display when the REST API is enabled.

### **Best Practices**

Cisco recommends the following best practices for optimal results with the REST API:

- Keep UI users and script users separate. Especially do not use the admin account as an API user.
- Do not give script users more privilege than needed.
- Always validate the content coming from the server.
- Validate/sanitize JSON content, as it may include embedded executable code.
- If you are using CC or UCAPL mode you should disable REST API access to the Firepower Management Center and managed devices.

### **Additional Resources**

Additional resources for the Firepower Management Center REST API can be found on Cisco DevNet at https://developer.cisco.com/firepower/.

**About the API Explorer** 

- About the API Explorer, on page 3
- Authentication to the API Explorer, on page 3
- Obtaining Sample Code, on page 4
- Viewing API Parameters, on page 5

# **About the API Explorer**

The API Explorer provides a limited interface for the REST API as well as giving a view of the abilities of the REST API.

The API Explorer resides on the Firepower Management Center, and can be accessed via the Firepower Management Center at:

https://<management center IP or name>:<https port>/api/api-explorer

This explorer provides the list of APIs available on the Firepower Management Center, and their details.

# **Authentication to the API Explorer**

The REST API relies on the same authentication as the Firepower Management Center. Each function in the REST API maps to permissions in the Firepower Management Center.

You can log into the API Explorer using any account on the Firepower Management Center, but you will only be able to perform the functions for which the account has permissions. For more information on setting permissions for user roles, see the *Firepower Management Center Configuration Guide*.

The first time you connect to the API Explorer you may receive an error that the connection is not secure due to an invalid certificate. You will need to add an exception in your browser to use the certificate and accept the connection.

# **Logging into API Explorer**

The REST API uses the same authentication and permission model as the Firepower Management Center. See the *Firepower Management Center Configuration Guide* for more information.

#### Before you begin

Make sure you have an account on your Firepower Management Center with the required permissions to perform the tasks you want to perform using the REST API.

#### **Procedure**

Step 1 Navigate to the following URL: https://<management\_center\_IP\_or\_name>:<https\_port>/api/api-explorer

If you experience an extended load time for the logon screen when using a Firefox browser, enter **about:support** in the search bar and click the **Refresh Firefox** option, then view the Firepower Management Center interface with self-signed certificates in the same Firefox browser. For more information, see <a href="https://support.mozilla.org/en-US/kb/refresh-firefox-reset-add-ons-and-settings">https://support.mozilla.org/en-US/kb/refresh-firefox-reset-add-ons-and-settings</a>.

**Step 2** Log in with your username and password and click "Sign In"

#### What to do next

Locate the desired resource and request.

### **Setting the Domain**

The REST API can perform functions globally, in the default domain, or in specific domains.

#### Before you begin

You must have a configured Firepower Management Center, an account with permissions to access the REST API in one or more domains configured on your FMC.

#### **Procedure**

In the upper right, drop down the Domains menu and select the desired domain.

#### What to do next

Locate the desired resource and request type.

# **Obtaining Sample Code**

You can use the Export Operation button in API Explorer to save the displayed method example as a Python or Perl script file to your local host. This script can be used to make that REST call, and can be integrated into your application. This is meant primarily as an educational and bootstrapping tool.

• Python: The Python scripts require you to install Python, available from https://www.python.org/. Once you've installed Python, you can run your script with python script.py username password.

- Perl: Using the Perl scripts requires some additional set-up—you need five components:
  - Perl package, found at http://www.perl.org/
  - Bundle::CPAN, found at http://search.cpan.org/~andk/Bundle-CPAN-1.861/CPAN.pm
  - REST::Client, found at http://search.cpan.org/~mcrawfor/REST-Client-88/lib/REST/Client.pm
  - MIME::Base64, found at http://perldoc.perl.org/MIME/Base64.html
  - JSON, found at http://search.cpan.org/~makamaka/JSON-2.90/lib/JSON.pm

### **Obtaining Sample Code**

The API Explorer can create sample code in Python and Perl to aid in creating a REST API client.

#### Before you begin

You must have a configured Firepower Management Center and an account on that center with the permissions required to use the desired REST API functions.

#### **Procedure**

- **Step 1** Select the resource where you want to obtain sample code from the API INFO menu.
- Step 2 Locate the desired function and select DELETE, PUT, POST, or GET.
- **Step 3** Select and input all other parameters for the desired function. This will vary depending on the function.
- **Step 4** On the right, drop down the menu for "Export operation in" and select "Python script" or "Perl script".
- **Step 5** The sample code will pop up in a new window. Cut and paste this code to use in your REST API client.

#### What to do next

Use this sample code to implement your own REST API client.

# **Viewing API Parameters**

Each resource has a set of parameters and fields associated with it. You can view the parameters and fields by performing any of the supported operations for that resource within API Explorer.

#### Before you begin

You must have a configured Firepower Management Center and an account on that center with the permissions required to use the desired REST API functions.

#### **Procedure**

- **Step 1** Select the desired resource.
- **Step 2** Select one of the supported operations for that resource.

# **Connecting with a Client**

You can access the REST API using any REST API client. Typically REST API clients are available as browser plugins, but any REST API client is allowed.

Note

If connecting to the REST API for the first time, you will receive a certificate warning. You need to accept the certificate in order to use the REST API.

• Authentication from a REST API Client, on page 7

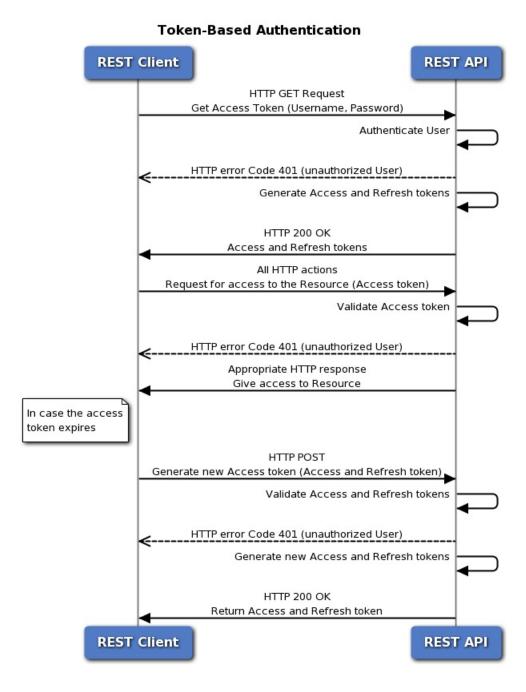

### **Authentication from a REST API Client**

Cisco recommends that you use different accounts for interfacing with the API and the Firepower User Interface. Credentials cannot be used for both interfaces simultaneously, and will be logged out without warning if used for both.

The first time you connect to the REST API you may receive an error that the connection is not secure due to an invalid certificate. Add an exception in your browser to use the certificate and accept the connection.

With Token Based Authentication you obtain a token by providing your username and password. You use this token to access an HTTP service for a limited time period without the need for the username and password with every request. In other words, to eliminate the need for authenticating with your username and password with each request, you replace user credentials with a uniquely generated access token, which you use for accessing resources for up to 30 minutes and can refresh up to three times.

The diagram below illustrates the concept of token-based authentication:

### **Requesting an Authentication Token**

The Token Generation Utility provides an authentication token which can be used in your REST API client.

#### Before you begin

You must have a configured Firepower Management Center and an account on that center with credentials to use the REST API. You must also have a REST API Client which can perform basic authentication.

#### **Procedure**

- Step 1 Open your REST API Client.
- **Step 2** Set the client to make a POST command to the following URL:

https://<management\_center\_IP\_or\_name>/api/fmc\_platform/v1/auth/generatetoken.

**Step 3** Include the username and password as a basic authentication header. The POST body should be blank.

#### What to do next

Add the header x-auth-access-token: <authentication token value> in requests to the API.

Add the headers x-auth-access-token:<authentication token value> and x-auth-refresh-token:<refresh token value> in requests to refresh the token as described in Authentication from a REST API Client, on page 7

Use the Domain UUID from the authentication token in all REST requests to the server.

## **Refreshing an Authentication Token**

Firepower Management Center REST API authentication tokens are valid for 30 minutes, and can be refreshed up to three times.

#### Before you begin

Obtain valid authentication and refresh tokens from the Firepower Management Center REST API. Ensure these tokens have been refreshed less than three times.

#### **Procedure**

- **Step 1** Open your REST API Client.
- Step 2 Set the client to make a POST command to the following URL: https://<management\_center\_IP\_or\_name>/api/fmc\_platform/v1/auth/refreshtoken with the headers X-auth-access-token:<authentication token value> and X-auth-refresh-token:<refresh token value>.

#### What to do next

Add the header X-auth-access-token: <new authentication token value> in requests to the API.

Add the header x-auth-refresh-token: <new refresh token value> in requests to refresh the token.

Refreshing an Authentication Token

# **Objects in the REST API**

- Object Services, on page 34
- Policy Services, on page 51
- Policy Assignment Services, on page 57
- Status Services, on page 57
- System Information, on page 58

# **Request Structure**

#### Request Structure:

Requests are sent to the Firepower Management Center as HTTPS requests with the Uniform Resource Identifier (URI) of the form described below:

https://<management\_center\_IP\_or\_name>:<https\_port>/<object\_URL>/object\_UUIDoptions

#### Where:

- <management\_center\_IP\_or\_name>
   is the IP address or Fully Qualified Domain Name of the Firepower Management Center
- <a href="https\_port">https\_port</a>
   is the port number used by the Firepower Management Center for HTTPS connections. This port is always 443.
- <object URL>

is the specific URL for the desired resource. These URLs are unique for each resource and are given below.

• options

are the options given with the request. Options can be used to modify the output and filter results.

• {UUID}

Many URLs contain one or more UUIDs which must be specified. Most URIs include the domain UUID, which can be found in the Authentication Token. When deleting or modifying an object, or requesting information about a specific object, the URI will end with the object UUID.

Available request methods are:

- GET
- Retrieves data from the specified object. GET is a read-only operation.
- PUT
- Adds the supplied information to the specified object; returns a 404 Resource Not Found error if the object does not exist.

Note

Currently PUT may be used to create a new object, but this ability may be removed in later releases. Use POST to create new objects and PUT to modify existing objects.

- POST
- Creates the object with the supplied information. POST operations should be followed with a payload consisting of the JSON object to be created, enclosed in braces:

{object]

Note

The maximum number of rules you can use depends on memory of the device. There is no set limit, because complex rules use more memory. For rule performance and optimization guidelines, see the Firepower Management Center Configuration Guide.

- DELETE
- Deletes the specified object.
- PATCH
- Not supported.

The API supports query parameters for almost all requests. For GET requests, the following query parameters can be used to control the number of of returned objects and the pagination:

- expanded
- This is a True/False value which indicates whether you get a full listing of an item in a list or only a reference. Some fields will only show if this flag is set to true.

- offset
- Indicates the position in the list where you want to start.
- limit
- Indicates the number of items you want to retrieve in a page.

The API supports filtering on the basis of query parameters passed with a request. Filtering can be done based on specific attributes in a model. The parameters available for filtering vary by object, and are listed with the request below.

# **Bulk Rule Posting**

Multiple access control rules can be added with a POST command using the bulk insert feature. This feature allows as many as 1,000 rules to be added at once.

This feature is only available for access rules.

The URL for this feature is:

 $\verb|https://{firc_IP_or_name}|: \verb|https:port|/api/firc_config/v1/damain_WIID|/policy/accesspolicies/{policy_WIID}/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicies/fipolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|/accesspolicy_WIID|$ 

#### The option:

?bulk=true

indicates that that multiple rules will be used in the payload of this request.

All objects in the payload of the bulk POST request must be of the same type. You cannot mix different objects in the same bulk request.

Unlike a normal POST operation, the bulk POST requires a list of JSON objects. This list may have as many as 1,000 objects or as few as one. The individual JSON objects must be enclosed in braces. Each object must be separated by commas, and the entire list is enclosed in brackets:

```
[{object}]
[{object1}, {object2}, {object3}, {object4}, {object5} ...]
```

The following query parameters are supported in bulk POST requests:

• bulk=true

This parameter specifies that the bulk POST feature is being used in the query. This parameter is **required** for bulk rule posting.

• section=mandatory/default

This parameter specifies the section into which the rules will be added. If this parameter is not used the section will be the default section. Only mandatory and default are allowed values. If a section is specified it must exist or the request will fail. If a section is specified, a category cannot be specified.

• category=<Name of the category>

This parameter specifies the category into which the rules will be added. If a category is specified it must exist or the request will fail. If a category is specified, a section cannot be specified.

• insertAfter=<Index of rule>

This parameter specifies that the rules will be inserted after the specified rule index. If no section or category is specified, the rules will be added to the section or category after the insertion point.

• insertBefore=<Index of rule>

This parameter specifies that the rules will be inserted before the specified rule index. If no section or category is specified, the rules will be added to the section or category before the insertion point. insertBefore takes precedence over insertAfter - if both are specified, the insertBefore parameter will apply.

When a rule or group of rules are inserted at an index which is part of either a section or a category, the category or section parameter can be used along with index to specify the insertion location of the rule(s). If an index is given along with a section or category, but the index is not in that section or category, you will receive an error.

If no index is specified, rules will be inserted after the end of the access policy. If a category or section is specified but no index is specified, rules will be inserted at the end of the category or section.

In any given POST all of the rules will be inserted at a single point. You cannot specify multiple insertion locations in a POST request.

Note

Rule order affects how orders are parsed by the Firepower Management Center.

# **Response Structure**

Note

The REST API will serve only 25 results per page. This can be increased up to 1000 using the limit query parameter.

The response structure can be:

- LOCATION Newly created resource ID; for POST only—holds the new resource ID (as a URI representation).
- CONTENT-TYPE Media type describing the response message body; describes the representation and syntax of the response message body.
- Each response includes an HTTP status or error code. Available codes fall into these categories:
- 20x A two-hundred series code indicates successful operation, including:
- 200 OK
- Standard response for successful requests.
- 201 Created
- Request completed; new resource created.
- 202 Accepted
- Request accepted, but processing not complete.
- 204 No Content
  - Server successfully processed request; no content is being returned.

- 4xx A four-hundred series code indicates a client-side error, including:
- 400 Bad Request
- Invalid query parameters, including unrecognized parameters, missing parameters, or invalid values.

This can indicate that the object was edited or deleted via REST API such that the corresponding policy is invalidated.

- 404 Not Found
- The provided URL does not match an existing resource. For example, an HTTP DELETE may fail because the resource is unavailable.
- 405 Method not Allowed
- An HTTP request was presented that is not allowed on the resource; for example, a POST on a read-only resource.
- 422 Unprocessable Entity
- The payload is too large. This will occur when you send a payload greater than 2048000 bytes.
- The payload contains an unprocessable or unreadable entity such as a invalid attribut name or incorrect JSON syntax.
- 429 Too Many Requests
- Too many requests were sent to the API. This error will occur if you send more than 120 requests per minute.
- Too many concurrent requests. The system cannot accept more than 10 parallel requests from all clients.
- Too many write operations per server. The API will only allow one PUT, POST, or DELETE request per user on a server at a time.
- 5xx A five-hundred series code indicates a server-side error.

In the case of an error, in addition to the error code, the return response may include an error object containing more details about the error. The JSON error/warning response schema is as follows:

```
"error": {
  "category": "FRAMEWORK",
  "messages": [
  {
   "description": "Action is mandatory to be specified."
}
  ],
  "severity": "ERROR"
}
```

where the object properties are:

#### **Table 1: Object Properties**

Property	Туре	Description
messages	List of Dictionaries	List of error or warning messages
code	String	Error/Warning/Info code
details	String	Detailed message corresponding to Error/Warning/Info

# **Rate Limiting**

The Firepower Management Center REST API implements rate limiting to reduce network load.

The API will accept no more than 120 messages per minute from an individual IP address. It will only allow 10 simultaneous connections per IP address. These are not configurable parameters.

If a client exceeds these limits, the API will give an HTTP 429 error.

# **Payload Limiting**

The API cannot accept a message with a payload greater than 2048000 bytes. This applies to both the REST API and to API Explorer. This is not a configurable parameter.

If a message exceeds this limit, the API will give an HTTP 422 error.

### **Audit Services**

#### **GET** auditrecords

Request Type: GET

Description: Retrieves audit records.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/audit/auditrecords| \\$ 

 $URL\ for\ GET\ by\ ID: \ \verb|/api/fmc_config/v1/domain/{domain_UUID}|/audit/auditrecords/{objectID}| \\$ 

Permissions: System > Monitoring > Audit

Parameters available for filtering: username, subsystem, source, starttime, endtime

# **Deployment Services**

### **GET** deployabledevices

Request Type: GET

Description: Retrieves list of all devices with configuration changes, ready to be deployed.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/deployment/deployabledevices| | Config/v1/domain/{domain_UUID}|/deployment/deployabledevices| | Config/v1/domain/{domain_UUID}|/deployabledevices| | Config/v1/domain/{domain_UUID}|/deployabledevices| | Config/v1/domain_UUID|/deployabledevices| | Config/v1/domain_UUID|/deploya$ 

Permissions: Deploy Configuration to Devices

Parameters available for filtering: name

### **POST** deployment requests

Request Type: POST

Description: Creates a request for deploying configuration changes to the specified device.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/deployment/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentrequests/{object_UUID}|/deploymentreq$ 

Permissions: Deploy Configuration to Devices

# **Device Group Services**

#### **DELETE** devicegrouprecords

Request Type: **DELETE** 

Description: Deletes a device group with the specified object ID.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}| device groups/device group records/{object| UUID}| device groups/device group records/{object| UUID}| device groups/device groups/de$ 

Permissions: Devices > Device Management > Modify Devices

## **PUT** devicegrouprecords

Request Type: PUT

Description: Modifies a device group with the specified object ID.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegroups/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecords/{object_UUID}|/devicegrouprecord$ 

Permissions: Devices > Device Management > Modify Devices

### **POST** devicegrouprecords

Request Type: POST

Description: Creates a device group with the specified object ID.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}| device groups/device group records| and the config/v1/domain/{domain| UUID}| device groups/device groups$ 

Permissions: Devices > Device Management > Modify Devices

### **GET** devicegrouprecords

Request Type: GET

Description: Retrieves the device group associated with the specified ID. If no ID is specified, retrieves list of all device groups.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/devicegroups/devicegrouprecords| \\$ 

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > View Devices

### **Device HA Pair Services**

### **DELETE ftddevicehapair**

Request Type: **DELETE** 

Description: Deletes a device high availability pair with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

Note

Run the configure high-availability disable command to remove the failover configurations from FTD devices.

### **PUT ftddevicehapair**

Request Type: **PUT** 

Description: Sets any one of the following actions for the Firepower Threat Defense high availability device:

- Sets the failover trigger criteria for the device
- Switches states within the device
- · Breaks or force-breaks the device

#### URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

### **POST ftddevicehapairs**

Request Type: POST

Description: Creates a high availability device pair with the specified primary and secondary object IDs. Do not perform the POST operation for more than one high availability pair at a time. Ensure that the current POST operation is completed successfully before proceeding to the next POST operation.

Note

Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see GET taskstatuses, on page 57.

URL:/api/fmc config/v1/domain/{domain UUID}/devicehapairs/ftddevicehapairs

Permissions: Devices > Device Management > Modify Devices

### **GET ftddevicehapairs**

Request Type: GET

Description: Retrieves the details associated with the specified high availability container ID. If no ID is specified, retrieves a list of all high availability container objects.

URL: /api/fmc config/v1/domain/{domain UUID}/devicehapairs/ftddevicehapairs

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

### **Device Services**

#### **POST** copyconfigrequests

Request Type: POST

Description: Copies device configuration to the specified Firepower Threat Defense device.

 $URL: \ / api/fmc\_config/v1/domain/\{domain\_UUID\}/devices/copyconfigrequests$ 

Permissions: Devices > Device Management > Modify Devices

### **DELETE** devicerecords

Request Type: **DELETE** 

Description: Unregisters the specified device.

URL: /api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{object UUID}

Permissions: Devices > Device Management > Modify Devices

#### **PUT** devicerecords

Request Type: PUT

Description: Modifies the device record associated with the specified ID.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}/devices/devicerecords/{object| UUID}| which is a substitution of the config. The configuration of the con$ 

Permissions: Devices > Device Management > Modify Devices

#### **POST** devicerecords

Request Type: POST

Description: Registers the specified device to the Firepower Managemenr Center.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/devices/devicerecords| \\$ 

Permissions: Devices > Device Management > Modify Devices

#### **GET** devicerecords

Request Type: GET

Description: Retrieves device information. If a device ID is specified, the information for the specificed device is retrieved. If no ID is specified, retrieves information for all devices.

 $URL: \texttt{/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords}$ 

 $URL\ for\ GET\ by\ ID: \ \ /\ api/fmc\_config/v1/domain/\{domain\_UUID\}/devices/devicerecords/\{object\_UUID\}/devices/devicerecords/d$ 

Permissions: Devices > Device Management Parameters available for filtering: hostName

### **PUT fpphysicalinterfaces**

Request Type: PUT

Description: Modifies a physical interface on the specified device.

URL:

/api/fmc config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/fpphysicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

### **GET fpphysicalinterfaces**

Request Type: GET

Description: Retrieves information on the physical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all physical interfaces associated with the specified NGIPS device ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/fpphysicalinterfaces

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/fpphysicalinterfaces/{object UUID}

Permissions: Devices > Device Management

Parameters available for filtering: name

### **DELETE fplogicalinterfaces**

Request Type: **DELETE** 

Description: Deletes logical interfaces on the specified device.

 $URL: \ / api/fmc\_config/v1/domain/\{domain\_UUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/\{containerUUID\}/devices/devicerecords/devicere$ 

fplogicalinterfaces/{object UUID}

Permissions: Devices > Device Management > Modify Device

### **PUT fplogicalinterfaces**

Request Type: PUT

Description: Modifies a logical interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

#### **POST fplogicalinterfaces**

Request Type: POST

Description: Creates logical interfaces on the specified device.

URL:

 $/api/fmc\_config/v1/domain/\{domain\_UUID\}/devices/devicerecords/\{container\_UUID\}/fplogical interfaces/devicerecords/\{container\_UUID\}/fplogical interfaces/devicerecords/\{container\_UUID\}/fplogical interfaces/devicerecords/device$ 

Permissions: Devices > Device Management > Modify Device

### **GET fplogicalinterfaces**

Request Type: GET

Description: Retrieves the logical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all logical interfaces associated with the specified NGIPS device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces

URL for GET by ID:

Permissions: Devices > Device Management

Parameters available for filtering: name

#### **DELETE** inlinesets

Request Type: **DELETE** 

Description: Deletes inline sets on the specified device.

URL:

/api/fmc config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

#### **PUT** inlinesets

Request Type: PUT

Description: Modifies an inline set on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

#### **POST** inlinesets

Request Type: POST

Description: Creates inline sets on the specified device.

 $URL: \verb|/api/fmc| config/v1/domain/{domain|UUID}/devices/devicerecords/{container|UUID}/inlinesets| and the config/v1/domain/{domain|UUID}/devices/devicerecords/{container|UUID}/inlinesets| and the config/v1/domain/{domain|UUID}/devices/devicerecords/{container|UUID}/inlinesets| and the config/v1/domain/{domain|UUID}/inlinesets| and the config/v1/domain/{domain}/inlinesets| and the config/v1/domain/{domain}/inlineset| and the config/v1/domain/{domain}/inlineset| and the config/v1/domain/{doma$ 

Permissions: Devices > Device Management > Modify Device

#### **GET** inlinesets

Request Type: **GET** 

Description: Retrieves information on the inline set associated with the specified NGIPS device ID and inline set ID. If no inline set ID is specified, retrieves list of all inline sets associated with the specified NGIPS device ID.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/devices/devicerecords/{container_UUID}|/inlinesets|| api/fmc_config/v1/domain/{domain_UUID}|/inlinesets|| api/fmc_config/v1/domain_UUID|/inlinesets|| api/fmc_config/v1/domain_UUID|/inlineset$ 

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: name

#### **GET** staticroutes

Request Type: GET

Description: Retrieves list of all IPv4 and IPv6 Static Routes associated with the specified device.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/staticroutes

URL for GET ID::

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/staticroutes/{object\_UUID}

Permissions: Devices > Devices Management

### **DELETE ipv4staticroutes**

Request Type: **DELETE** 

Description: Deletes the IPv4 Static Route associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object\_UUID}

Permissions: Devices > Devices Management > Modify Devices

### **PUT ipv4staticroutes**

Request Type: PUT

Description: Modifies the IPv4 Static Route associated with the specified ID.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object UUID}

Permissions: Devices > Devices Management > Modify Devices

### POST ipv4staticroutes

Request Type: **POST** 

Description: Creates an IPv4 Static Route.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes

Permissions: Devices > Device Management > Modify Devices

#### **GET** ipv4staticroutes

Request Type: GET

Description: Retrieves the IPv4 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv4 Static Routes.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes

URL for GET ID::

Permissions: Devices > Devices Management

### **DELETE ipv6staticroutes**

Request Type: **DELETE** 

Description: Deletes the IPv6 Static Route associated with the specified ID.

URL:

Permissions: Devices > Device Management > Modify Devices

### **PUT ipv6staticroutes**

Request Type: PUT

Description: Modifies the IPv6 Static Route associated with the specified ID.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object UUID}

Permissions: Devices > Device Management > Modify Devices

### POST ipv6staticroutes

Request Type: POST

Description: Creates an IPv6 Static Route.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes

Permissions: Devices > Device Management > Modify Devices

### **GET** ipv6staticroutes

Request Type: **GET** 

Description: Retrieves the IPv6 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv6 Static Routes.

URL:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes

URL for GET ID:

/api/fmc config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object UUID}

Permissions: Devices > Device Management

#### **DELETE virtualswitches**

Request Type: **DELETE** 

Description: Deletes a virtual switch on the specified device.

This method is only available on a Firepower 1010 device.

URL:

/api/fmc config/vl/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

#### **PUT virtualswitches**

Request Type: PUT

Description: Modifies a virtual switch on the specified device.

This method is only available on a Firepower 1010 device.

URL:

/api/fmc config/v1/domain/{UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object UUID}

Permissions: Devices > Device Management > Modify Device

#### **POST** virtualswitches

Request Type: POST

Description: Creates a virtual switch on the specified device.

This method is only available on a Firepower 1010 device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/virtualswitches

Permissions: Devices > Device Management > Modify Device

#### **GET** virtualswitches

Request Type: **GET** 

Description: Retrieves virtual switch associated with the specified NGIPS device ID and virtual switch ID. If no virtual switch ID is specified, retrieves list of all virtual switches associated with the specified NGIPS device ID.

This method is only available on a Firepower 1010 device.

 $\label{local_unitary} URL: \mbox{\sc /api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/virtuals witches \mbox{\sc /api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/virtuals \mbox{\sc /api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{containerUUID}/devicerecords/{$ 

URL for GET by ID:

pnybicarinecriaces

Permissions: Devices > Device Management > Modify Device

### **GET** physicalinterfaces

Request Type: **GET** 

Description: Retrieves the physical interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all physical interfaces associated with the specified NGFW device ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/physicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management

### **GET** bridgegroupinterfaces

Request Type: GET

Description: Retrieves the bridge group interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all bridge group interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/bridgegroupinterfaces/{object UUID}

Permissions: Devices > Device Management

## **POST** bridgegroupinterfaces

Request Type: POST

Description: Creates bridge group interfaces associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## **PUT** bridgegroupinterfaces

Request Type: PUT

Description: Modifies a bridge group interface on the specified device.

URL:

 $/api/fmc\_config/v1/domain/\{domain\_UUID\}/devices/devicerecords/\{container\_UUID\}/bridgegroup interfaces$ 

Permissions: Devices > Device Management > Modify Device

## **DELETE** bridgegroupinterfaces

Request Type: **DELETE** 

Description: Deletes a bridge group interface associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## **GET** redundantinterfaces

Request Type: GET

Description: Retrieves the redundant interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all redundant interfaces associated with the specified NGFW device ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/redundantinterfaces

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/redundantinterfaces/{object UUID}

Permissions: Devices > Device Management

### **POST** redundantinterfaces

Request Type: POST

Description: Creates redundant interfaces on a specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/redundantinterfaces

Permissions: Devices > Device Management

#### **PUT redundantinterfaces**

Request Type: PUT

Description: Modifies redundant interfaces on a specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/redundantinterfaces

Permissions: Devices > Device Management > Modify Device

#### **DELETE** redundantinterfaces

Request Type: **DELETE** 

Description: Removes redundant interfaces on a specified device.

URL:

Permissions: Devices > Device Management

### **GET** etherchannelinterfaces

Request Type: GET

Description: Retrieves the ethernet channel interface associated with the specified NGFW device ID and interface ID. If no ID is specified, retrieves list of all ethernet channel interfaces associated with the specified NGFW device ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/etherchannelinterfaces

URL for GET by ID:

Permissions: Devices > Device Management

Parameters available for filtering:

#### POST etherchannelinterfaces

Request Type: POST

Description: Creates ethernet channel interfaces on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/ethernetchannelinterfaces

Permissions: Devices > Device Management > Modify Device

#### **PUT** etherchannelinterfaces

Request Type: PUT

Description: Modifies an ethernet channel interfaces on the specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{containerUUID}/ethernetchannelinterfaces/

Permissions: Devices > Device Management > Modify Device

#### **DELETE** etherchannelinterfaces

Request Type: **DELETE** 

Description: Removes ethernet channel interfaces from a specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/ethernetchannelinterfaces

Permissions: Devices > Device Management

### **GET** subinterfaces

Request Type: **GET** 

Description: Retrieves the sub-interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all sub-interfaces associated with the specified NGFW device ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/subinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## **POST** subinterfaces

Request Type: **POST** 

Description: Creates sub interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces

Permissions: Devices > Device Management

#### **PUT** subinterfaces

Request Type: PUT

Description: Modifies a sub interface on the specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/subinterfaces/

Permissions: Devices > Device Management > Modify Device

### **DELETE** subinterfaces

Request Type: **DELETE** 

Description: Deletes sub interfaces on a specified device.

URL:

/api/fmc config/v1/domain/{domain UUID}/devices/devicerecords/{container UUID}/subinterfaces

Permissions: Devices > Device Management

## **GET** fpinterfacestatistics

Request Type: GET

Description: Retrieves list of statistics for all interfaces associated with the specified NGIPS device ID.

 $\label{eq:url_config} URL: \mbox{\sc domain_uuID}/\mbox{\sc domain_uuID}/\mbox{\sc device} \mbox{\sc devicerecords/\{container\sc uuID\}/fpinterfacestatistics}$

Permissions: Object Manager > Modify Object Manager

## **GET** ranges

Request Type: GET

Description: Retrieves the address range object associated with the specified ID. If no ID is specified, retrieves list of all address range objects.

URL for listing: /api/fmc config/v1/domain/{domain UUID}/object/ranges

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{object\_UUID}

Permissions: Object Manager

#### **GET realms**

Request Type: **GET** 

Description: Retrieves the realm object associated with the specified ID. If no ID is specified, retrieves list of all realm objects.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/realms|$ 

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/object/realms/{object UUID}

Permissions: Object Manager

## **GET** realmusergroups

Request Type: **GET** 

Description: Retrieves the realm user group object associated with the specified ID. If no ID is specified, retrieves list of all realm user group objects.

URL: /api/fmc config/v1/domain/{domain UUID}/object/realmusergroups

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/object/realmusergroups/{object UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

Note

This is a required parameter.

### **GET realmusers**

Request Type: GET

Description: Retrieves the realm user object associated with the specified ID. If no ID is specified, retrieves list of all realm user objects.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/realmusers||$ 

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusers/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

Note

This is a required parameter.

## **GET** securitygrouptags

Request Type: GET

Description: Retrieves the custom security group tag object associated with the specified ID. If no ID is specified, retrieves list of all custom security group tag objects.

 $URL: \verb|/api/fmc| config/v1/domain/{domain_UUID}| object/security group tags$ 

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/object/securitygrouptags/{object UUID}

Permissions: Object Manager

Parameters available for filtering: name

## **DELETE** securityzones

Request Type: **DELETE** 

Description: Deletes the specified securityzone objects.

Permissions: Object Manager>Modify Object Manager

### **PUT** securityzones

Request Type: PUT

Description: Modifies a securityzone object.

Permissions: Object Manager>Modify Object Manager

## **POST** securityzones

Request Type: POST

Description: Creates or overrides the securityzone objects with the specified parameters.

URL: /api/fmc config/v1/domain/{domain UUID}/object/securityzones

Permissions: Object Manager > Modify Object Manager

## **GET** securityzones

Request Type: **GET** 

Description: Retrieves the security zone objects associated with the specified ID. If no ID is specified, retrieves list of all security zone objects.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/securityzones|$ 

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/object/securityzones/{object UUID}

Permissions: Object Manager

Parameters available for filtering: name

#### **GET** siurlfeeds

Request Type: GET

Description: Retrieves the Security Intelligence url feed object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url feed objects.

URL: /api/fmc config/v1/domain/{domain UUID}/object/siurlfeeds

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurlfeeds/{object\_UUID}

Permissions: Object Manager

### **GET** siurllists

Request Type: GET

Description: Retrieves the Security Intelligence url list object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url list objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurllists

URL for GET by ID: /api/fmc config/v1/domain/{domain\_UUID}/object/siurllists/{object\_UUID}

Permissions: Object Manager

### **DELETE slamonitors**

Request Type: **DELETE** 

Description: Deletes the sla monitor object associated with the specified ID.

URL: /api/fmc config/v1/domain/{domain UUID}/object/slamonitors/{object UUID}

Permissions: Object Manager > Modify Object Manager

### **PUT slamonitors**

Request Type: PUT

Description: Modifies the sla monitor object associated with the specified ID.

Permissions: Object Manager > Modify Object Manager

## **POST slamonitors**

Request Type: POST

Description: Creates or overrides a SLA monitor with the specified parameters.

URL: /api/fmc config/v1/domain/{domain UUID}/object/slamonitors

#### **GET** slamonitors

Request Type: GET

Description: Retrieves the SLA Monitors associated with the specified ID. If no ID is specified, retrieves list of all SLA Monitors.

 $URL: \verb|/api/fmc config/v1/domain/{domain_UUID}|/object/slamonitors|$ 

URL by GET by ID: /api/fmc config/v1/domain/{domain UUID}/object/slamonitors/{object UUID}

Permissions: Object Manager

## **GET** tunneltags

Request Type: **GET** 

Description: Retrieves the tunnel tag object associated with the specified ID. If no ID is specified, retrieves list of all tunnel tag objects.

URL: /api/fmc config/v1/domain/{domain UUID}/object/tunneltags

 $URL\ for\ GET\ by\ ID: \ / \texttt{api/fmc\_config/v1/domain/\{domain\_UUID\}/object/tunneltags/\{object\_UUID\}/object/tunneltags/(object\_UUID)/object/tunneltags/(objec$ 

Permissions: Object Manager

## **GET** urlcategories

Request Type: **GET** 

Description: Retrieves the url category object associated with the specified ID. If no ID is specified, retrieves list of all url category objects.

 $URL\ for\ GET\ by\ ID: \ \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/{object_UUID}|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|/object/urlcategories/|$ 

Permissions: Object Manager

## **DELETE urlgroups**

Request Type: **DELETE** 

Description: Deletes the specified urlgroup objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

Permissions: Object Manager > Modify Object Manager

## **PUT urlgroups**

Request Type: **PUT** 

Description: Modifies urlgroup objects.

URL: /api/fmc config/v1/domain/{domain UUID}/object/urlgroups/{object UUID}

Permissions: Object Manager > Modify Object Manager

## **POST urlgroups**

Request Type: POST

Description: Creates or overrides the urlgroup objects with the specified parameters.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/urlgroups||$ 

Permissions: Object Manager > Modify Object Manager

## **GET urlgroups**

Request Type: **GET** 

Description: Retrieves the url group objects associated with the specified ID. If no ID is specified, retrieves list of all url group objects.

URL for listing: /api/fmc config/v1/domain/{domain UUID}/object/urlgroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

#### **DELETE urls**

### **PUT urls**

Request Type: PUT

Description: Modifies a URL.

URL: /api/fmc config/v1/domain/{domain UUID}/object/urls/{object UUID}

Permissions: Object Manager

### **POST urls**

Request Type: **POST** 

Description: Creates or overrides the URLs with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

Permissions: Object Manager > Modify Object Manager

### **GET urls**

Request Type: GET

Description: Retrieves the url objects associated with the specified ID. If no ID is specified, retrieves list of all url objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

 $URL\ for\ GET\ by\ ID: \ \verb|/api/fmc| config/v1/domain/{domain_UUID}| \ \verb|/object/urls/{object_UUID}| \ |$ 

Permissions: Object Manager

#### **GET** variablesets

Request Type: GET

Description: Retrieves the variable set object associated with the specified ID. If no ID is specified, retrieves list of all variable set objects.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/object/variable sets| \\$ 

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/object/variablesets/{object UUID}

Permissions: Object Manager

## **DELETE vlangrouptags**

Request Type: **DELETE** 

Description: Deletes the specified vlangrouptag objects.

 $URL: \ /api/fmc\_config/v1/domain/\{domain\_UUID\}/object/vlangrouptags/\{object\_UUID\}/object/vlangrouptags/(object\_UUID)/ob$ 

URL to DELETE overrides on a particular object:

/api/fmc config/v1/domain/{domain\_UUID}/object/vlangrouptags/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## **PUT vlangrouptags**

Request Type: PUT

Description: Modifies vlangrouptag objects.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}| object/vlangrouptags/{object| UUI$ 

Permissions: Object Manager > Modify Object Manager

## **POST vlangrouptags**

Request Type: **POST** 

Description: Creates or overrides the VLAN group tags with the specified parameters.

URL: /api/fmc config/v1/domain/{domain UUID}/object/vlangrouptags

Permissions: Object Manager > Modify Object Managers

## **GET vlangrouptags**

Request Type: GET

Description: Retrieves the vlan group tag objects associated with the specified ID. If no ID is specified, retrieves list of all vlan group tag objects.

URL for listing: /api/fmc config/v1/domain/{domain UUID}/object/vlangrouptags

Permissions: Object Manager > Modify Object Manager

## **DELETE vlantags**

Request Type: **DELETE** 

Description: Deletes the specified VLAN tag objects.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}| object/vlantags/{object| UUID}| object/vla$ 

URL to DELETE overrides on a particular object:

/api/fmc config/v1/domain/{domain UUID}/object/vlantags/{object UUID}?overrideTargetId={target UUID}

Permissions: Object Manager > Modify Object Manager

## **PUT vlantags**

Request Type: PUT

Description: Modifies VLAN tag objects.

 $URL: \verb|/api/fmc| config/v1/domain/{domain| UUID}| object/vlantags/{object| UUID}| object/vla$ 

Permissions: Object Manager > Modify Object Manager

## **POST vlantags**

Request Type: POST

Description: Creates or overrides the VLAN tags with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags

Permissions: Object Manager > Modify Object Manager

### **GET vlantags**

Request Type: GET

Description: Retrieves the vlantag objects associated with the specified ID. If no ID is specified, retrieves list of all vlantag objects.

URL for listing: /api/fmc config/v1/domain/{domain UUID}/object/vlantags

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{object\_UUID}

Permissions: Object Manager

# **Policy Services**

## **DELETE** accesspolicies

Request Type: **DELETE** 

Description: Deletes the access control policy with the specified ID.

URL: /api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{object UUID}

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## **PUT accesspolicies**

Request Type: PUT

Description: Modifies an access control policy.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}|/policy/accesspolicies/{object_UUID}$ 

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## **POST** accesspolicies

Request Type: POST

Description: Creates an access control policy with the specified parameters.

URL: /api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies

Permissions: Policies>Access Control Policy>Modify Access Control Policy

## **GET** accesspolicies

Request Type: GET

Description: Retrieves the access control policy associated with the specified ID. If no ID is specified, retrieves a list of all access control policies.

URL: /api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{object UUID}

Permissions: Policies

### **DELETE** accessrules

Request Type: **DELETE** 

Description: Deletes an access control rule in the specified access control policy.

URL:

 $/api/fmc\_config/v1/domain/\{domain\_UUID\}/policy/accesspolicies/\{container\_UUID\}/accessrules/\{object\_UUID\}/policy/accesspolicies/\{container\_UUID\}/policy/accesspolicies/(container\_UUID)/policy/accesspolicies/(container\_UUID)/policy/accesspolicies/(container\_UUID)/policy/accespolicies/(container\_UUID)/policy/accespolicies/(container\_UUID)/policy/accespolicies/(containe$ 

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

#### **PUT accessrules**

Request Type: PUT

Description: Modifies an access control rule in the specified access control policy.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{container UUID}/accessrules/{object UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

#### POST accessrules

Request Type: POST

Description: Creates an access control rule in the specified access control policy.

URL:

/api/fmc config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

#### **GET** accessrules

Request Type: **GET** 

Description: Retrieves the access control rule associated with the specified policy ID and rule ID. If no rule ID is specified, retrieves list of all access rules associated with the specified policy ID.

URL:

/api/fmc config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{container UUID}/accessrules/{object UUID}

Permissions: Policies>Access Control>Access Control Policy

## **PUT defaultactions**

Request Type: PUT

Description: Modifies the default action associated with the specified access control policy ID and default action ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{container UUID}/defaultactions/{object UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## **GET** defaultactions

Request Type: **GET** 

Description: Retrieves the default action associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/accesspolicies/{container UUID}/defaultactions

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy

## **GET** filepolicies

Request Type: GET

Description: Retrieves the file policy object associated with the specified ID. If no ID is specified, retrieves list of all file policy objects.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/policy/filepolicies||$ 

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/policy/filepolicies/{object UUID}

Permissions: Policies>Access Control>Malware & File Policy

## **DELETE ftdnatpolicies**

Request Type: **DELETE** 

Description: Deletes the Firepower Threat Defense NAT policy with the specified ID.

 $URL: \ /api/fmc\_config/v1/domain/\{domain\_UUID\}/policy/ftdnatpolicies/\{object\_UUID\}/policy/ftdnatpolicies/ftdnatp$ 

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **PUT ftdnatpolicies**

Request Type: PUT

Description: Modifies an Firepower Threat Defense NAT policy with the specified ID.

URL:/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{object UUID}

Permissions: Devices>NAT>NAT List>Modify NAT policy

## **POST ftdnatpolicies**

Request Type: **POST** 

Description: Creates a Firepower Threat Defense device NAT policy with the specified parameters.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/policy/ftdnatpolicies||$ 

Permissions: Devices>NAT>NAT List > Modify NAT policy

## **GET ftdnatpolicies**

Request Type: GET

Description: Retrieves the Firepower Threat Defense NAT policy associated with the specified ID. If no ID is specified, retrieves a list of all Firepower Threat Defense NAT policies.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}|/policy/ftdnatpolicies||$ 

URL for GET by ID: /api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{object UUID}

Permissions: Devices>NAT>NAT List

#### **DELETE** autonatrules

Request Type: **DELETE** 

Description: Deletes a NAT rule with the specified parameters.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{container UUID}/autonatrules/{object UUID}

Permissions: Devices>NAT>NAT List>Modify NAT policy

#### **PUT** autonatrules

Request Type: PUT

Description: Modifies a NAT rule with the specified parameters.

HRI:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{container UUID}/autonatrules/{autonatrule UUID}

Permissions: Devices>NAT>NAT List>Modify NAT policy

## **POST** autonatrules

Request Type: POST

Description: Creates a NAT policy with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

Permissions: Devices>NAT>NAT List>Modify NAT policy

### **GET** autonatrules

Request Type: GET

Description: Retrieves the NAT rule associated with the specific ID. If no ID is specified, retrieves a list of all NAT rules.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

URL for GET by ID:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies{container UUID}/autonatrules/{object UUID}

Permissions: Devices>NAT>NAT List

#### **DELETE** manualnatrules

Request Type: POST

Description: Deletes a manual NAT rule in the specified NAT policy.

URL:

/api/fmc config/v1/domain/{domain/UUID}/policy/ftdnatpolicies/{container UUID}/manualnatrules/{object UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

### **PUT** manualnatrules

Request Type: PUT

Description: Modify a manual NAT rule in the specified NAT policy.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{container UUID}/manualnatrules/{object UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

#### **POST** manualnatrules

Request Type: **POST** 

Description: Creates manual NAT rules with the specified parameters.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{container UUID}/manualnatrules

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **GET** manualnatrules

Request Type: GET

Description: Retrieves the manual NAT rule associated with the specified ID. If no ID is specified, retrieves a list of all manual NAT rules.

URL:

/api/fmc config/v1/domain/{domain UUID}/policy/ftdnatpolicies/{container UUID}/manualnatrules

URL for GET by ID:

/api/fmc config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/manualnatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List

#### **GET** natrules

Request Type: **GET** 

Description: Retrieves the list of all NAT rules (manual and auto) associated with the specified NAT policy.

 $URL: \ / api/fmc\_config/v1/domain/\{domain\_UUID\}/policy/ftdnatpolicies/\{container\_UUID\}/natrules$ 

Permissions: Devices>NAT>NAT List

## **GET** intrusionpolicies

Request Type: **GET** 

Description: Retrieves the intrusion policy associated with the specified ID. If no ID is specified, retrieves list of all intrusion policies.

 $URL: \ /api/fmc\_config/v1/domain/\{domain\_UUID\}/policy/intrusion policies$ 

URL for GET by ID

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies/{object\_UUID}

Permissions: Policies>Access Control>Intrusion Policy

## **GET** snmpalerts

Request Type: **GET** 

Description: Retrieves the SNMP alert object associated with the specified ID. If no ID is specified, retrieves a list of all SNMP alert objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/snmpalerts

 $URL\ for\ GET\ by\ ID: \ / \texttt{api/fmc\_config/v1/domain/\{domain\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/\{object\_UUID\}/policy/snmpalerts/(object\_UUID)/snmpalerts/(object\_UUID)/snmpalerts/(object\_UUID)/snmpal$ 

Permissions: Policies > Actions > Alerts > View Alerts

### **GET** syslogalerts

Request Type: **GET** 

Description: Retrieves the syslog alert object associated with the specified ID. If no ID is specified, retrieves a list of all syslog alert objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/syslogalerts

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/syslogalerts/{object\_UUID}

Permissions: Policies > Actions > Alerts

# **Policy Assignment Services**

## **PUT policyassignments**

Request Type: PUT

Description: Modifies an assigned access policy to add a new device or a new device group.

 $URL: \verb|/api/fmc_config/v1/domain/{domain_UUID}| assignment/policyassignments/{object_UUID}| assignment/policyassignments/{object_UUID}| assignment/policyassignments/{object_UUID}| assignment/policyassignments/{object_UUID}| assignment/policyassignments/{object_UUID}| assignment/policyassignme$ 

Permissions:

## **POST policyassignments**

Request Type: POST

Description: Assigns an unassigned access policy to devices or device groups.

Permissions:

## **GET policyassignments**

Request Type: GET

Description: Retrieves the policy assignment associated with the specified ID. If no ID is specified, retrieves a list of all policy assignments to target devices.

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments/{object\_UUID}

Permissions:

Parameters available for filtering: name

## **Status Services**

### **GET** taskstatuses

Description: Retrieves information about a previously submitted pending job/task with the specified ID. This is currently supported for device registration and deployment jobs.

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/job/taskstatuses/{object\_UUID}

Permissions: Modify Devices/Deployment

# **System Information**

### **GET** serverversion

Request Type: GET

Description: Requests version information for the server. If no ID is specified, retrieves a list of all servers.

 $URL: \verb|/api/fmc_platform/v1/info/serverversion| \\$ 

 $URL\ for\ GET\ by\ ID: \ \verb|/api/fmc_platform/v1/info/serverversion/{objectID}|$ 

Permissions:
