

Introduction

Welcome to the *Cisco Threat Grid Appliance Administration Guide*. This chapter provides a brief description of the appliance, the intended audience and how to access relevant product documentation.

- [Resetting the Administrator Password, on page 7](#)

About the Cisco Threat Grid Appliance

The Cisco Threat Grid appliance provides safe and highly secure on-premises advanced malware analysis, with deep threat analytics and content. A Threat Grid Appliance provides the complete Threat Grid malware analysis platform, installed on a Cisco Threat Grid M5 Appliance server (v2.7.2 and later). It empowers organizations operating under various compliance and policy restrictions, to submit malware samples to the appliance.

Note Cisco UCS C220-M3 (TG5000) and Cisco UCS C220 M4 (TG5400) servers are still supported for Threat Grid Appliance but the servers are end of life.

Many organizations that handle sensitive data, such as banks and health services, must follow various regulatory rules and guidelines that do not allow certain types of files, such as malware artifacts, to be sent outside of the network for malware analysis. By maintaining a Cisco Threat Grid Appliance on-premises, organizations are able to send suspicious documents and files to it to be analyzed without leaving the network.

With a Threat Grid Appliance, security teams can analyze all samples using proprietary and highly secure static and dynamic analysis techniques. The appliance correlates the analysis results with hundreds of millions of previously analyzed malware artifacts, to provide a global view of malware attacks and campaigns, and their distributions. A single sample of observed activity and characteristics can quickly be correlated against millions of other samples to fully understand its behaviors within an historical and global context. This ability helps security teams to effectively defend the organization against threats and attacks from advanced malware.

What's New In This Release

The following changes have been implemented in this guide in Version 2.11:

Table 1: Changes in Version 2.11, 2.11.1, 2.11.2, 2.11.3, 2.11.4

| Feature or Update | Section |
|-------------------------------------------------------------------------------------------|---------|
| Complete update and reorganization of contents in this guide to reflect the new Admin UI. | All |

Audience

This guide is intended to be used by the Threat Grid Appliance administrator after the appliance has been set up and configured, and an initial test malware sample has been successfully submitted and analyzed. It describes how to manage organizations and users for the Threat Grid malware analysis tool, appliance updates, backups, and other server administration tasks.

This guide also provides information for administrators who are integrating the Threat Grid Appliance with other Cisco products and services, such as Cisco Email Security Appliance, Cisco Web Security Appliance, and AMP for Endpoints Private Cloud devices.

Note For information about Threat Grid Appliance setup and configuration, see the [Cisco Threat Grid Appliance Getting Started Guide](#).

About This Guide

This guide provides planning information, configuration tasks, and general administrative tasks, and is organized as follows:

| Chapter | Description |
|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Introduction | Provides brief description of the appliance, the intended audience, how to access relevant product documentation, log in names and passwords, how to reset the administrator password, and contacting Support. |
| Planning | Describes the environmental, hardware, and network requirements that should be reviewed prior to setup and configuration. |
| Network Configuration Using the TGS Dialog | Provides information about using the TGS Dialog to make changes to your initial network configuration, reconnecting to the TGS Dialog, and configuring the network in recovery mode. |
| Configuration Using the Admin UI | Provides information about using the Admin UI to make configuration changes to your appliance. See About the Admin UI for a complete list of tasks that can be performed. |

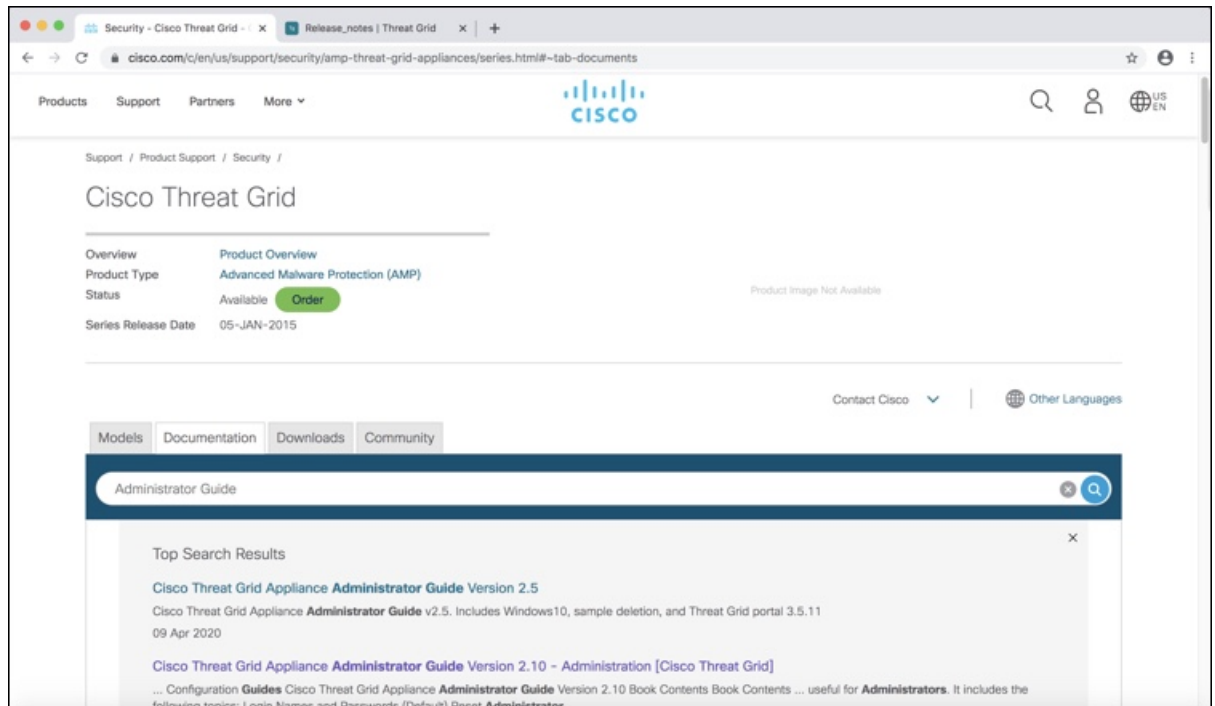

| Chapter | Description |
|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Status | Provides information about viewing system information in the Admin UI, such as installed system packages and their version, detailed logs, and available storage. |
| Operations | Provides information about activating configuration changes, reloading the Admin UI, managing jobs and power settings, and installing updates. |
| Support | Provides instructions for starting a live support session and taking support snapshots to aid in resolving issues with the appliance. |
| Organizations and Users | Provides instructions for creating organizations, managing users, and activating a new device user account. |
| Inbound and Outbound Connections | Provides information about connecting other Cisco appliances (ESA and WSA), and AMP for Endpoints Private Cloud to the Threat Grid Appliance. |
| Removing All Data with the Wipe Appliance Boot Option | Describes how to use the Wipe Appliance boot option to remove all data from the Threat Grid Appliance, including clusters. |
| CIMC Configuration | Provides information about using the CIMC utility to set up remote server management. |

User Documentation

Threat Grid Appliance User Guides

The latest versions of Cisco Threat Grid Appliance product documentation can be found on [Cisco.com](https://www.cisco.com).

Figure 1: User Guides on Cisco.com

- [Cisco Threat Grid Appliance Release Notes](#)
- [Cisco Threat Grid Appliance Getting Started Guide](#)
- [Cisco Threat Grid Version Lookup Table](#)
- [Cisco Threat Grid M5 Hardware Installation Guide](#)

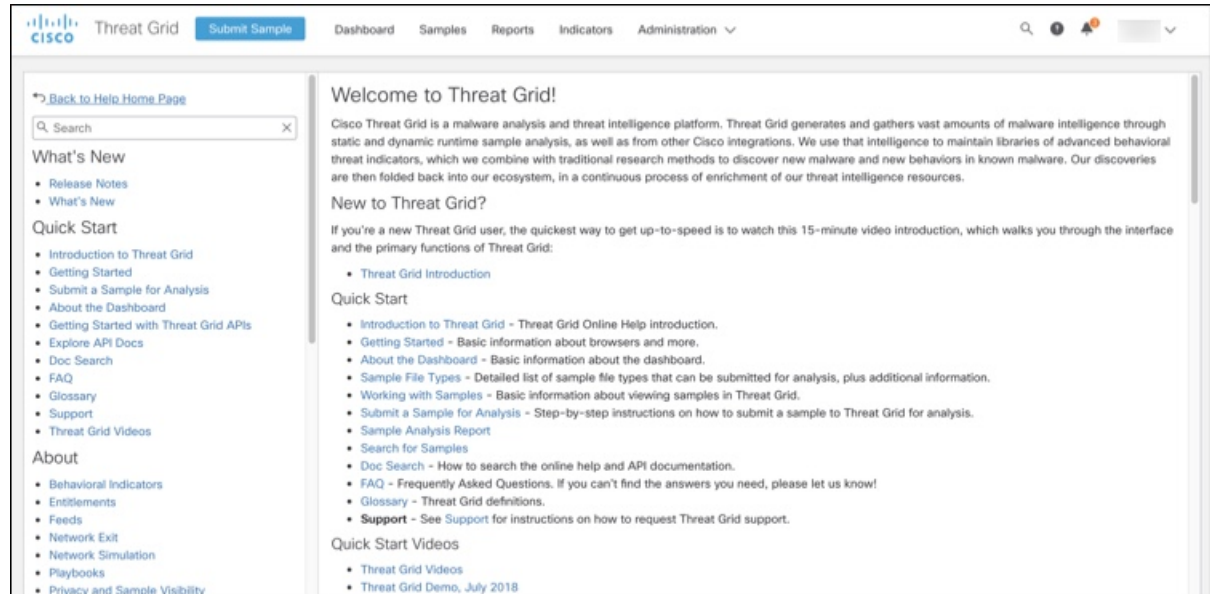

Note The Cisco Threat Grid M5 Appliance is supported in Threat Grid Version 3.5.27 and later, and appliance version 2.7.2 and later.

Threat Grid Portal UI Online Help

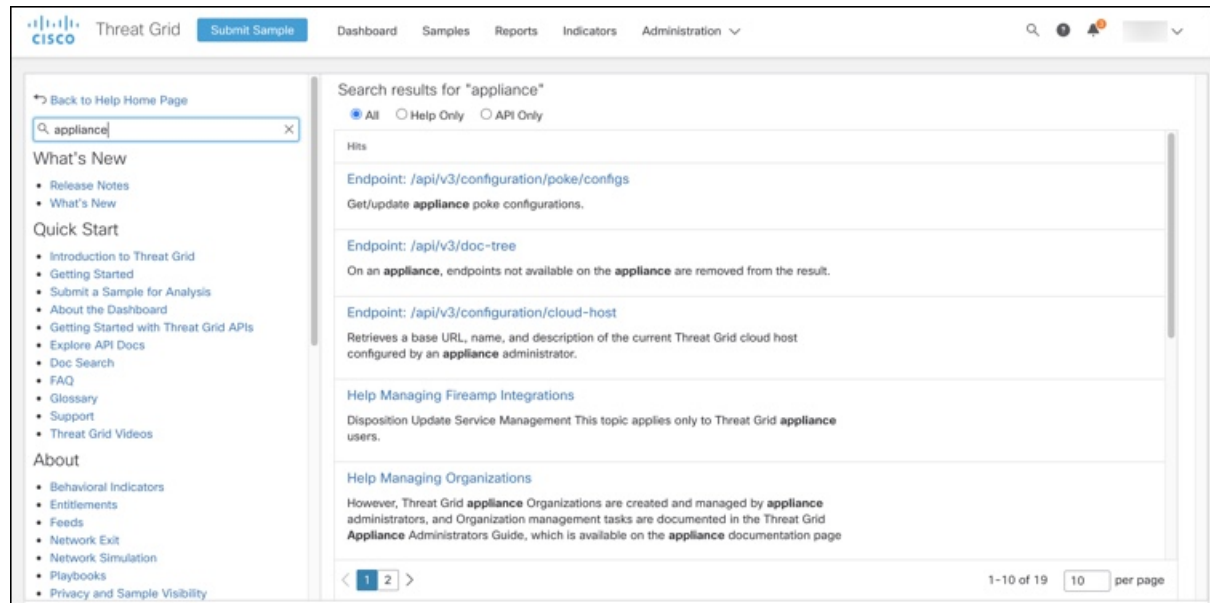

Threat Grid Portal user documentation, including Release Notes, Using Threat Grid Online Help, API documentation, and other information is available from the **?** (**Help**) icon located in the navigation bar in the upper right corner of the Threat Grid user interface.

Figure 2: Threat Grid Portal Online Help

Use the online help Search feature located at the top of the left column to find appliance-specific information.

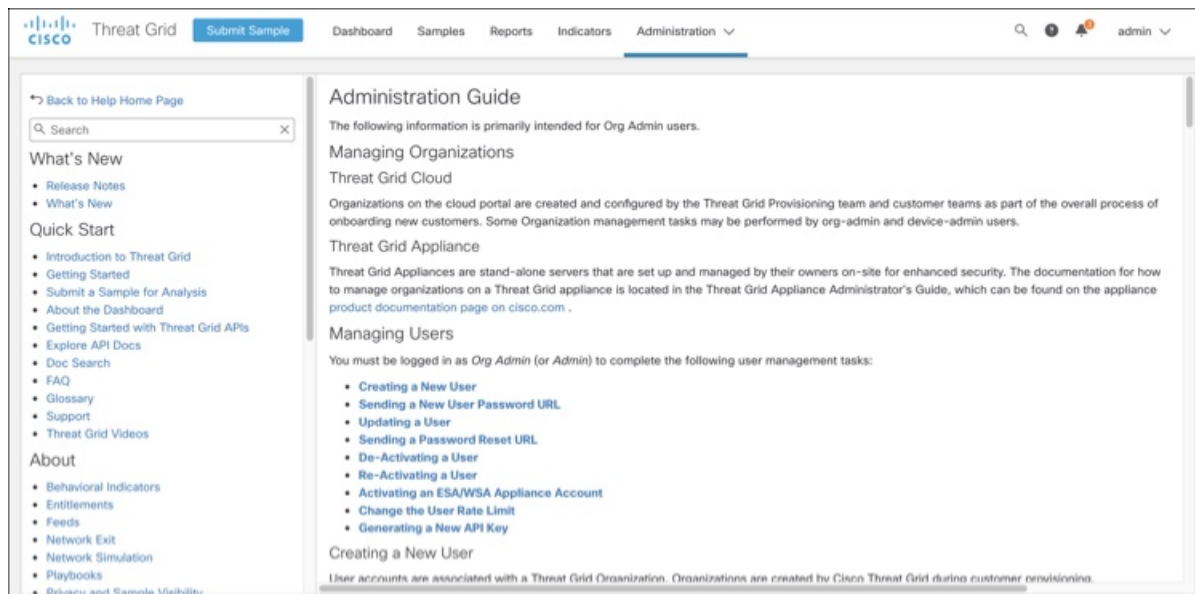

Figure 3: Online Help Search Feature

Threat Grid Portal UI Administration Guide

A portal online help topic is available for administrators, with instructions on how to manage users and other information. Click the **Administration** tab and choose **Administration Guide**.

Figure 4: Administration Guide for the Threat Grid Portal UI

Email Security Appliance and Web Security Appliance Documentation

For information on connecting an Email Security Appliance (ESA) or Web Security Appliance (WSA), see [Integrations](#).

See the instructions for Enabling and Configuring File Reputation and Analysis Services in the online help or user guide for your ESA/WSA:

- [Cisco Email Security Appliance User Guide](#)
- [Cisco Web Security Appliance User Guide](#)

Login Names and Passwords (Default)

The default login names and passwords are listed in the following table:

| User | Login/Password |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Admin UI and Shell User | Use the initial Threat Grid/TGSH Dialog randomly generated password, and then the new password entered during the first step of the Admin UI configuration workflow. If you lose the password, follow the instructions in Resetting the Administrator Password . |
| Threat Grid Web portal UI Administrator | Login: admin Password: Initialize with the first Admin UI password, and then it becomes independent. |

| User | Login/Password |
|------|--------------------------------------------------|
| CIMC | Login: admin Password: password |

Password Criteria

Passwords must include the following:

- Minimum of 8 characters
- At least one number
- At least one special character
- Uppercase and lowercase characters

Resetting the Administrator Password

The default administrator password is only visible in the TGS dialog during the initial appliance setup and configuration. Once the initial configuration is completed, the password is no longer displayed in visible text.

Note LDAP authentication is available for TGS dialog and Admin UI login when you have multiple administrators. If the appliance is configured for LDAP authentication only, resetting the password in recovery mode will reconfigure the authentication mode to allow login with system password as well.

If you lose the administrator password and are unable to log in to the Admin UI, complete the following steps to reset the password.

Step 1 Reboot the Threat Grid Appliance and immediately select **Recovery Mode** from the Recovery Options.

Figure 5: Boot Menu - Recovery Mode

The Threat Grid Shell opens.

Figure 6: Threat Grid Shell (tgsh) in Recovery Mode

```

any network configuration changes will be applied both to the running recovery
instance and to the real (non-recovery) system, and tgsh will be immediately
restarted.
( 29.363065) configure-from-target(1352): net.ipv4.tcp_sack = 1
( OK ) Started OpenSSH Daemon.
YOU MUST EXIT TGSH BEFORE NETWORK CONFIGURATION CHANGES TAKE EFFECT.
FAILING TO DO SO MAY PREVENT SUPPORT STAFF FROM BEING ABLE TO REACH YOUR SYSTEM.
( 29.454665) configure-from-target(1352): net.ipv4.tcp_window_scaling = 1
( OK ) Reached target ThreatGRID Recovery Mode.
Welcome to the ThreatGrid Shell.
For help, type "help" then enter.
( 29.516710) configure-from-target(1352): net.ipv4.tcp_keepalive_intvl = 30
>> ( 29.566235) configure-from-target(1352): net.ipv4.tcp_tw_reuse = 1

( 29.772456) systemd[1]: Starting ThreatGRID Recovery Mode.
( 29.781763) systemd[1]: Reached target ThreatGRID Recovery Mode.
( 29.791010) systemd[1]: Started ThreatGRID Support Mode Worker.
( 29.800165) systemd[1]: Startup finished in 5.581s (kernel) + 23.940s (userspace) = 29.530s.
( 29.809835) configure-from-target(1352): Now with importing configuration from target
( 29.819359) rash-worker(1501): -- rash-worker.go:42: MASH worker "FCH18329319" ready to dial router.
( 30.827516) rash-worker(1501): -- rash-worker.go:55: connected to router "ThreatGRID" at rash.threatgrid.com:19791

```

Step 2 Run `passwd` to change the password.

Figure 7: Enter New Password

```

>> passwd
( 286.653257) sudo(1511): threatgrid : TTY=ttty1 ; PWD=/home/threatgrid ; USER=root ; COMMAND=/usr/bin/passwd threatgrid
Enter new UNIX password: ( 286.663606) sudo(1511): pam_unix(sudo:session): session opened for user root by (uid=0)

```

Note The command prompt is not always visible in this mode and logging output may be displayed at any point on top of your input. This does not affect input; you can keep typing blindly. Ignore the two lines of logging output.

Step 3 Enter (blindly) the password and press **Enter**.

Step 4 Re-type the password and press **Enter**.

Note The password will not be displayed.

Step 5 Type **reboot** and press **Enter** to start the appliance in normal mode.

Note The exit command is no longer required before rebooting for a password reset to take effect (for v2.10 and later).
