Configuring the Cisco uBR904 Cable Modem

This chapter describes how to configure your Cisco uBR904 cable modem and includes the following sections:

• Configuration Overview
• Configuration Scenarios
• Configuring the Cisco uBR904 Using Cisco Fast Step
• Configuring Plug-and-Play Bridging
• Configuring Advanced Routing or Bridging Using Setup
• Configuring the Cisco uBR904 Cable Modem Manually
• Verifying the Installation
• If You Need More Information

Note You need to acquire the correct network addresses from your system administrator or consult your network plan to determine correct addresses before you can complete the cable modem configuration.
The Cisco uBR904 cable modem is configured automatically using a configuration file generated by the cable modem operator and delivered via the Cisco uBR7246 universal broadband router installed at the cable headend. The Cisco uBR7246 universal broadband router provides a path to the Cisco uBR904 cable modem for both the DHCP server and PC address assignment.

The personal computer(s) connected to the cable modem must be configured for Internet Protocol (IP). In addition, your cable service provider must have a correctly configured network Dynamic Hierarchical Control Protocol (DHCP) server and EIA downstream channel. Using DHCP, the universal broadband router assigns an IP address to your cable modem each time you connect to the network. The IP address identifies the computer on the network and enables the universal broadband router to route data to and from your computer.

When the cable modem is installed, the connected computer is configured for IP and has DHCP services enabled, and communication to the headend is established, the Cisco uBR7246 universal broadband router downloads configuration information to the cable modem. The initial configuration connection to the headend can take several minutes.

If the connection to the cable headend cannot be established, follow the troubleshooting guidelines in the chapter “Troubleshooting the Installation.”

**Note** For an explanation of error messages that appear on the uBR904, please see the book, Cisco Cable CPE Error Messages, viewable online at www.cisco.com/univercd/cc/td/doc/product/cable/cab_modm/ubcmerrs.pdf.

**Configuration Scenarios**

You can configure your cable modem to act as a bridge or router. See the following sections for a brief description of both scenarios.
In this scenario, the cable modem acts as a bridge for up to three PCs plugged directly into three of the four Ethernet ports on the cable modem and the Internet connected via the coaxial cable. All three Ethernet ports are treated as one Ethernet interface by the Cisco IOS software. The IP address for the PC and the coaxial cable interface are in the same subnet.

Figure 4-1  Cisco uBR904 in a Bridging Configuration

You can configure your bridging using one of these methods:

- Configure automatically using Cisco Fast Step software. For details, see the Cisco uBR904 Cable Modem Cabling and Setup Quick Start Guide that shipped with your cable modem.

- Set up the basic configuration with minimum user input using Plug and Play. We recommend this method if you want DOCSIS-compliant bridging. If your cable service provider is using DHCP, you do not need IP addresses for the PCs. You need to simply plug in the cables and run without using Cisco Fast Step software or doing any configuration. See “Configuring Plug-and-Play Bridging” for details.

- Set up advanced bridging using the System Configuration dialog box in the setup facility. See “Configuring Advanced Routing or Bridging Using Setup” for details.

- Configure manually using the Command Line Interface (CLI). See “Configuring the Cisco uBR904 Cable Modem Manually” for details.

The bridging configuration is the default configuration for the Cisco uBR904 cable modem.
Sample Configuration

This is a typical bridging configuration for a single PC connected to the cable modem. Note that the configuration for multiple PCs (maximum three) is the same.

```
version 11.3
no service pad
no service password-encryption
!
hostname Router
!
!
no ip routing
!
!
interface Ethernet0
  no ip route-cache
  bridge-group 59
  bridge-group 59 spanning-disabled
!
interface cable-modem0
  no ip address
  no ip route-cache
  no keepalive
  bridge-group 59
  bridge-group 59 spanning-disabled
!
ip classless
!
line con 0
line vty 0 4
  login
!
end
```

When the cable interface is up, the following lines are included in cable interface configuration.

```
ip address 188.188.1.40 255.255.0.0
cable-modem downstream saved channel 699000000 34
```
Routing

In this scenario, the cable modem acts as a router to connect to existing networks. A typical use would be if you are connecting the Cisco uBR904 cable modem directly to four PCs via the Ethernet ports or to an internal Ethernet hub, which is connected to an existing PC network.

Figure 4-2 Cisco uBR904 in a Routing Configuration with a Hub

The cable modem is automatically configured to use the IP address of the headend cable router as the cable modem’s default IP gateway.

You can configure your router using one of these methods:

- Configure automatically using Cisco Fast Step software. For details, see the Cisco uBR904 Cable Modem Cabling and Setup Quick Start Guide that shipped with your cable modem.

- Set up advanced routing using the System Configuration dialog box in the setup facility. See “Configuring Advanced Routing or Bridging Using Setup” for details.

- Configure manually using the Command Line Interface (CLI). See “Configuring the Cisco uBR904 Cable Modem Manually” for details.
Sample Configuration

**Note**  The cable IP address and downstream channel are auto-configured.

```plaintext
!
version 11.3
no service pad
no service password-encryption
!
hostname Router
!
!
!
!
!
interface Ethernet0
ip address 4.0.0.33 255.0.0.0
ip rip send version 2
ip rip receive version 2
!
interface cable-modem0
ip address 188.188.1.40 255.255.0.0
ip rip send version 2
ip rip receive version 2
no keepalive
cable-modem downstream saved channel 699000000 34
no cable-modem compliant bridge
!
router rip
network 4.0.0.0
network 188.188.0.0
!
ip classless
ip route 0.0.0.0 0.0.0.0 188.188.1.1
!
line con 0
line vty 0 4
login
!
end
```

The cable IP address and downstream channel are configured automatically.
Configuring the Cisco uBR904 Using Cisco Fast Step

If you are using a PC with Microsoft Windows 95 or Windows NT, you can use the quick and easy Cisco Fast Step software to configure your Cisco uBR904 cable modem for operation. For details on using this program, see the Cisco uBR904 Cable Modem Cabling and Setup Quick Start Guide that shipped with your cable modem.

Configuring Plug-and-Play Bridging

Plug-and-Play bridging sets up the basic configuration with minimal user input. We recommend this method if you want DOCSIS-compliant bridging. If your cable service provider is using a DHCP server, you do not need IP addresses for the PCs. You need to simply plug in the cables and turn on the cable modem. The modem will configure both the cable interface and bridging automatically. You can also convert your cable modem to Plug-and-Play bridging. See Table 4-1 and Table 4-2 for details.

Configure

Use Table 4-1 if you are configuring Plug-and-Play for the first time.

Table 4-1 Configuring Plug-and-Play for the First Time

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>uBR904 enable</td>
<td>Enter enable mode.</td>
</tr>
<tr>
<td></td>
<td>Password: &lt;password&gt;</td>
<td>Enter the enable password.</td>
</tr>
<tr>
<td></td>
<td>uBR904#</td>
<td>You have entered enable mode when the prompt changes to uBR904#.</td>
</tr>
<tr>
<td>2</td>
<td>uBR904# configure terminal</td>
<td>Enter global configuration mode. You have entered the global configuration mode when the prompt changes to uBR904(config)#.</td>
</tr>
<tr>
<td></td>
<td>Enter configuration commands, one per line.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>End with CNTL/Z.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>uBR904(config)#</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>uBR904(config)# interface cable-modem0</td>
<td>Configure the routing protocol on the cable modem interface.</td>
</tr>
</tbody>
</table>
Configuring Plug-and-Play Bridging

Table 4-1  Configuring Plug-and-Play for the First Time (Continued)

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>uBR904(config-if)# Ctrl-Z</td>
<td>Return to enable mode.</td>
</tr>
<tr>
<td></td>
<td>uBR904#</td>
<td></td>
</tr>
<tr>
<td></td>
<td>%SYS-5-CONFIG_I: Configured from console by console</td>
<td>This message is normal and does not indicate an error.</td>
</tr>
</tbody>
</table>

Use Table 4-2 if you are converting to Plug-and-Play bridging mode.

Table 4-2  Converting to Plug-and-Play Bridging

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>uBR904 enable</td>
<td>Enter enable mode.</td>

<td>uBR904(config)#</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>uBR904(config)# interface cable-modem0</td>
<td>Configure the routing protocol on the cable modem interface.</td>
</tr>
</tbody>
</table>
Verify

To verify that you configured Plug-and-Play bridging, enter the `show running-config` command:

```text
uBR904(config)# show running-config
Router# show run
Building configuration...
Current configuration:
!
version 11.3
no service pad
no service password-encryption
!
hostname Router
!
!
no ip routing
!
!
!
interface Ethernet0
no ip address
no ip route-cache
bridge-group 59
bridge-group 59 spanning-disabled
!
```

end

Tips

If you are having trouble, see the chapter, “Troubleshooting the Installation,” for troubleshooting guidelines.

Configuring Advanced Routing or Bridging Using Setup

Use the Setup facility to configure global parameters and advanced routing or bridging options.

Note If you make a mistake, you can exit and run the System Configuration dialog again. Press Ctrl-c, and type setup at the enable mode prompt (uBR904#).

Step 1 Connect a console terminal to the console port on the I/O controller. For details, see the section, “Connecting Console Cables” in the chapter “Installing the Cisco uBR904 Cable Modem.”

Step 2 If you are using a PC terminal emulation program, configure it for these settings:
  • 9600 baud
  • 8 data bits
Configuring Advanced Routing or Bridging Using Setup

- No parity
- 2 stop bits

**Step 3** Boot the Cisco uBR904 cable modem.

After booting from Flash memory, the following information appears after about 30 seconds. When you see this information, you have successfully booted your Cisco uBR904 cable modem:

**Caution**  *Do not press any keys on the keyboard until the messages stop and the prompt appears.* Any keys pressed during this time will be interpreted as the first command typed when the messages stop, which might cause you to power cycle the Cisco uBR904 cable modem and start over. It will take a few minutes for the messages to stop and the prompt to appear.

---

--- System Configuration Dialog ---

At any point you may enter a question mark '?' for help. Use ctrl-c to abort configuration dialog at any prompt. Default settings are in square brackets '[]'.

--- Note ---
The first two sections of the configuration script (the banner and the installed hardware) appear only at initial system startup. On subsequent uses of the setup command facility, the script begins with the prompt in Step 4.

--- Note ---
Information that you enter is in this **boldface** font. Also note that if you make a mistake during the configuration, you can exit and run the System Configuration dialog again. Press **Ctrl-c**, and then type **setup** at the enable prompt (**uBR904#**).

--- Step 4 ---
Enter **yes** when asked if you want to enter the System Configuration dialog:

Continue with configuration dialog? [yes/no]:

At any point you may enter a question mark '?' for help. Use ctrl-c to abort configuration dialog at any prompt. Default settings are in square brackets '[]'.

--- Step 5 ---
Enter **yes** or press **Enter** to see the current interface summary:

First, would you like to see the current interface summary? [yes]:

Need new example:

<table>
<thead>
<tr>
<th>Interface</th>
<th>IP-Address</th>
<th>OK? Method</th>
<th>Status</th>
<th>Protocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet0</td>
<td>4.0.0.28</td>
<td>YES NVRAM</td>
<td>up</td>
<td>up</td>
</tr>
<tr>
<td>cable-modem0</td>
<td>88.188.1.12</td>
<td>YES unset</td>
<td>up</td>
<td>up</td>
</tr>
</tbody>
</table>

--- Step 6 ---
Enter a host name for the cable modem:

Configuring global parameters:

Enter host name (**uBR904**): **cable-modem**
Step 7  Enter an enable secret password, enable password, and virtual terminal password. The enable secret password is encrypted (more secure) and cannot be seen when viewing the configuration. The enable password is not encrypted (less secure) and can be seen when viewing the configuration. Enter the virtual terminal password, which is used for remote console access. Note that you must enter a password.

The enable secret is a password used to protect access to privileged EXEC and configuration modes. This password, after entered, becomes encrypted in the configuration.
Enter enable secret: **barney**
The enable password is used when you do not specify an enable secret password, with some older software versions, and some boot images.
Enter enable password: **betty**

The virtual terminal password is used to protect access to the cable modem over a network interface.
Enter virtual terminal password: **wilma**

Step 8  The Simple Network Management Protocol (SNMP) is the most widely supported open standard for networking management. It provides a means to access and set configuration and runtime parameters of cable modems and communication servers. SNMP defines a set of functions that can be used to monitor and control network elements.

Enter **yes** to accept SNMP management or **no** to refuse it:

```
Configure SNMP Network Management? [yes]:
Community string [public]:
```

Step 9  When using IP routing, you must also select an interior routing protocol. You can specify only one of the two supported interior routing protocols to operate on your system using setup: Interior Gateway Routing Protocol (IGRP) or Routing Information Protocol (RIP).

Enter **yes** or press **Enter** to configure IP routing and choose an interior routing protocol:

```
Configure IP? [no]: **yes**
Configure IGRP routing? [yes]:
Your IGRP autonomous system number [1]:
```
Step 10 Configure your Ethernet interface parameters by entering yes, pressing Enter, or entering the requested information:

Configuring interface parameters:

Do you want to configure Ethernet0 interface? [yes]:
Configure IP on this interface? [yes]:
   IP address for this interface [4.0.0.28]:
   Subnet mask for this interface [255.0.0.0]:
   Class A network is 4.0.0.0, 8 subnet bits; mask is /8

Step 11 Configure your cable modem interface parameters by entering yes, pressing Enter, or entering the requested information:

Do you want to configure cable-modem0 interface? [yes]:
Configure IP on this interface? [yes]:
   IP address for this interface [188.188.1.12]:
   Subnet mask for this interface [255.255.0.0]:
   Class B network is 188.188.0.0, 16 subnet bits; mask is /16

The configuration program displays the command line interface script just created:

The following configuration command script was created:

hostname uBR904
enable secret 5 $1$5UFA$dQguizIbnvp1N$Ej4jqI40
enable password betty
line vty 0 4
password wilma
snmp-server community public
!
ip routing
!
interface Ethernet0
ip address 4.0.0.28 255.0.0.0
!
interface cable-modem0
ip address 188.188.1.12 255.255.0.0
dialer-list 1 protocol ip permit
dialer-list 1 protocol ipx permit
!
router igrp 1
redistribute connected
Verifying the Installation

Use this procedure to verify the connection to the network is complete after the cable LED goes on.

**Step 1** Turn ON the power switches on the computers connected to the cable modem (if the computers are not already turned on). Remember to turn ON the power switch to the monitors and any peripheral accessories as needed (such as printers and external drives). Wait for the computers to complete the startup process; the Ethernet LEDs (labeled 1, 2, 3, and 4) should go on.

**Step 2** Locate the Internet browser program installed on the computers. Common browser programs are Netscape Navigator and Microsoft Internet Explorer. Use the Start button on the Windows 95 window to locate the browser program.

**Step 3** Start the Internet browser program that you selected in Step 2.

```plaintext
network 4.0.0.0  
network 188.188.0.0  
!  
end
```

**Step 12** After the script is complete, you are prompted to choose one of the following options:

- **[0]** Go to the IOS command prompt without saving this config.
- **[1]** Return back to the setup without saving this config.
- **[2]** Save this configuration to nvram and exit.

Enter your selection [2]:

Choose [0] to return to the **uBR904** prompt without saving the configuration. Choose [1] to rerun the setup script in the System Configuration dialog again and create another configuration. Choose [2] to save the configuration and return to the **uBR904** prompt.

**Step 13** You can now modify the existing configuration or configure additional features with the CLI as described in the Cisco IOS software configuration guide and command reference publications. For details on configuring the Cisco uBR904 cable modem manually, see the section “Configuring the Cisco uBR904 Cable Modem Manually” for details.

**Verifying the Installation**

Use this procedure to verify the connection to the network is complete after the cable LED goes on.
Verifying the Installation

Step 4  Select an Internet web site, such as your company’s web site, and enter the URL in the appropriate area on your web browser screen.

Note A URL, or Universal Resource Locator, is an address or pointer to a web site on the Internet. The URL always starts with http://. These letters tell the Internet browser that the text that follows is a URL. The remainder of the URL points to a computer server on the Internet, a disk location on that server, and a particular file on that disk. If you find a web site that you might want to access again, save the URL in the browser program as a bookmark.

If a web site URL is not known or is not available to you, try using http://www.cisco.com to connect to Cisco Systems’ Cisco Connection Online (CCO) web site.

Note If you cannot verify that the network connection is successful, proceed to the chapter “Troubleshooting the Installation,” for troubleshooting recommendations and procedures.

If you can verify that the network connection is successful and you are an experienced cable installation technician, proceed to Step 5. Follow the instructions in this step to confirm that the cable modem will continue to operate properly in the event of network fluctuations.

Note If the web page that you selected comes up in the Internet browser screen, the network connection using the cable modem is successfully established. The Ethernet LEDs will blink when there is activity over the Ethernet cables between the computers and the cable modem.

Step 5  Disconnect the CATV cable input by unscrewing the cable connector at the back of the cable modem.

Step 6  Using an in-line attenuator, add 3 to 6 dB of attenuation between the Cisco uBR904 cable modem and the CATV cable input.
Note The addition of 3 to 6 dB of attenuation simulates the variation found in a cable network over time and in relation to temperature. If you install a cable modem at a time of year when the temperature is cooler, this step might not be necessary.

If you install a cable modem at a time of year when the temperature is warmer, this step might assist you in determining how the cable modem will function over time. If the cable modem does not function properly with the addition of attenuation, you should replace and reconfigure the coaxial cables at the installation site.

Step 7 Reconnect the CATV cable to the cable modem and check the network connection at the computer. Reload the previous web page, or try to access another URL. Verify that you can still successfully access the Internet.

Step 8 Disconnect the CATV cable input again by unscrewing the cable connector at the back of the cable modem.

Step 9 Remove the in-line attenuator from the back of the cable modem.

Step 10 Reconnect the CATV cable to the cable modem and recheck the network connection at the computer.

Configuring the Cisco uBR904 Cable Modem Manually

Using the Command Line Interface

This section describes what you need to know about the Cisco IOS software (the software that runs the cable modem) before you configure the cable modem using the Command Line Interface (CLI).

Understanding these concepts will make your configuration process faster and easier. If you have never used the Cisco IOS software or need a refresher, take a few minutes to read this section before you proceed to the next section.
If you are already familiar with the Cisco IOS software, proceed to the next section, “Configuring the Host Name and Password.”

Getting Help

Use the question mark (?) and arrow keys to help you enter commands:

- For a list of available commands, enter a question mark:
  
uBR904 ?

- To complete a command, enter known characters followed by a question mark (with no space):
  
uBR904 sho?

- For a list of command variables, enter the command followed by a space and a question mark:
  
uBR904 show ?

- To redisplay a command you previously entered, press the up arrow key. You can continue to press the up arrow key for more commands.

Understanding Command Modes

There are many different command modes that you will need to use to configure the cable modem. Each command mode restricts you to a subset of commands. If you are having trouble entering a command, check the prompt, and then enter the question mark (?) for a list of available commands. You might be in the wrong command mode or using the wrong syntax.

In the following example, notice how the prompt changes after each mode changing command:

  
uBR904 enable
  uBR904 password
  uBR904# configure terminal
  uBR904(config)# interface ethernet 0
  uBR904(config)# exit
  uBR904#
  %SYS-5-CONFIG_I: Configured from console by console
The last message is normal and does not indicate an error. Press Return to get the uBR904# prompt.

**Note** You can press Ctrl-z at any time to immediately return to enable mode (uBR904#), instead of entering exit, which returns you to the previous mode.

Finding Command Options

This section explains how to display options for a command. To display options for a command, enter a ? at the configuration prompt, or after entering part of a command followed by a space. The configuration parser displays options available with the command. For example, if you were in global configuration mode, entered the command arap, and wanted to see all the keywords and arguments for that command, you would type arap ?.

Table 4-3 shows examples of this function.

### Table 4-3 Finding Command Options

Configuring the Cisco uBR904 Cable Modem Manually

Configuring the Host Name and Password

One of the first configuration tasks you might want to do is configure the host name and set an encrypted password. Configuring a host name allows you to distinguish multiple Cisco uBR904 cable modems from each other. Setting an encrypted password allows you to prevent unauthorized configuration changes.

Note  Passwords are case sensitive.

Configure

Table 4-4  Configuring the Host Name and Password

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| 1    | uBR904> `enable`  
Password: `<password>`  
uBR904# | Enter enable mode. |
|      | uBR904# `configure terminal`  
Enter configuration commands, one per line. End with CNTL/Z.  
uBR904(config)# | Enter global configuration mode. You have entered global configuration mode when the prompt changes to uBR904(config)#. |
| 3    | uBR904(config)# `hostname 5300`  
uBR904(config)# | Change the name of the access server to a meaningful name. Substitute your host name for uBR904. |
| 4    | uBR904(config)# `enable secret guessme` | Enter an enable secret password. This password provides access to enable (privileged EXEC) mode. When a user types `enable` at the EXEC prompt (uBR904>), they must enter the enable secret password to gain access to configuration mode. Substitute your enable secret password for `guessme`. |
Configuring the Host Name and Password

Table 4-4 Configuring the Host Name and Password (Continued)

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>uBR904(config)# line con 0</td>
<td>Enter line configuration mode to configure the console port. When you enter line configuration mode, the prompt changes to uBR904(config-line)#.</td>
</tr>
<tr>
<td></td>
<td>uBR904(config-line)# exec-timeout 0 0</td>
<td>Prevent the access server’s EXEC facility from timing out if you do not type any information on the console screen for an extended period.</td>
</tr>
<tr>
<td></td>
<td>uBR904(config-line)# exit</td>
<td>Exit back to global configuration mode.</td>
</tr>
</tbody>
</table>

Verify

To verify that you configured the correct host name and passwords, enter the **show running-config** command:

```
uBR904(config)# show running-config
Using 1888 out of 126968 bytes

version XX.X

hostname uBR904

enable secret 5 $1$60L4$X2JY0woDc0.kqalloO/w8/
```

Check the host name and encrypted password displayed near the top of the command output.
Configuring the Cisco uBR904 Cable Modem Manually

- Exit global configuration mode and attempt to reenter it using the new enable password:

  uBR904# exit

  uBR904 con0 is now available
  Press RETURN to get started.
  uBR904 enable
  Password: guessme
  uBR904#

Tips

If you are having trouble:
- Make sure Caps Lock is off.
- Make sure you entered the correct passwords. Passwords are case sensitive.

Configuring Ethernet and Cable Modem Interfaces

Assign an IP address to either the Ethernet or cable modem interface so that it can be recognized as a device on the Ethernet LAN.

Configure

Table 4-5 Configuring Ethernet and Cable Modem Interfaces

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| 1    | uBR904 enable
  Password: <password>
  uBR904# | Enter enable mode.
  Enter the enable password.
  You have entered enable mode when the prompt changes to uBR904#.

| 2    | uBR904# configure terminal
  Enter configuration commands, one per line. End with CNTL/Z.
  uBR904(config)# | Enter global configuration mode. You have entered global configuration mode when the prompt changes to uBR904(config)#.
### Verify

To verify you have assigned the correct IP address, enter the `show arp` command:

```
�示命黑# show arp
Protocol Address Age (min) Hardware Addr Type Interface
Internet 188.188.1.1 157 0009.0613.6030 ARPA cable-modem0
Internet 188.188.1.12 - 00e0.1ed7.524e ARPA cable-modem0
Internet 4.0.0.28 - 00e0.1ed7.524d ARPA Ethernet0
```

### Tips

If you are having trouble:

- Make sure you are using the correct IP address.
- Make sure the cable interface is not shut down. Use the `show running-config` command (see the “Verify” section in “Switching from Bridging to Routing” for a sample output) to check the cable interface status.
Switching from Bridging to Routing

If you are using one or more PCs directly connected to your cable modem, you can switch your cable modem from acting as a bridge to acting as a router. Note that you can use a maximum of three PCs directly connected to your cable modem in a bridging scenario but you can use four PCs directly connected to your cable modem in a routing scenario. See the section “Configuration Scenarios” for details on both these configurations.

Configure

Use the steps in Table 4-6 to switch your cable modem from a bridging to a routing setup.

Table 4-6  Switching from Bridging to Routing

<table>
<thead>
<tr>
<th>Step</th>
<th>Command</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>uBR904 enable&lt;br&gt; Password: &lt;password&gt;&lt;br&gt; uBR904#</td>
<td>Enter enable mode. Enter the password. You have entered enable mode when the prompt changes to uBR904#.</td>
</tr>
<tr>
<td>2</td>
<td>uBR904# configure terminal&lt;br&gt; Enter configuration commands, one per line. End with CNTL/Z.&lt;br&gt; uBR904(config)#</td>
<td>Enter global configuration mode. You have entered the global configuration mode when the prompt changes to uBR904(config)#.</td>
</tr>
<tr>
<td>3</td>
<td>uBR904(config)# interface cable-modem0</td>
<td>Configure the cable modem interface.</td>
</tr>
<tr>
<td>4</td>
<td>uBR904(config)# no cable compliant bridge&lt;br&gt; uBR904(config)# end</td>
<td>Turn off MCNS auto-configured bridging for all interfaces.</td>
</tr>
<tr>
<td>5</td>
<td>uBR904(config)# ip routing&lt;br&gt; uBR904(config)# router rip&lt;br&gt; uBR904(config-router)#&lt;br&gt; uBR904(config-router)# network 188.188.0.0&lt;br&gt; uBR904(config-router)# network 4.0.0.0</td>
<td>Configure IP routing on the router.</td>
</tr>
<tr>
<td>6</td>
<td>uBR904(config)# interface cable-modem0&lt;br&gt; uBR904(config-if)# ip rip receive v 2&lt;br&gt; uBR904(config-if)# ip rip send version 2</td>
<td>Configure the routing protocol on the cable modem interface.</td>
</tr>
</tbody>
</table>
Verify

To verify that no bridging is configured, routing is enabled, and the routing protocol on the interfaces is configured, enter the `show running-config` command:

```
ubR904# show running-config
Building configuration...

Current configuration:
!
version 11.3
no service pad
no service password-encryption
service udp-small-servers
service tcp-small-servers
!
hostname ubR904
!
!

  cable-modem downstream search-band 99 187000000 203000000 6000000
  cable-modem downstream search-band 100 209000000 211000000 6000000

router rip
  network 4.0.0.0
  network 188.188.0.0

ip default-gateway 188.188.1.1
ip classless

line con 0
line vty 0 4
  login
  !
end

Tips

If you are having trouble, see the chapter, “Troubleshooting the Installation,” for troubleshooting guidelines.
Saving Configuration Changes

Enter the **copy running-config startup-config** command to save your configuration changes to nonvolatile random-access memory (NVRAM). This ensures that your configuration will not be lost if there is a system reload or power outage. For example:

```
uBR904# copy running-config startup-config
Building configuration...
```

It might take a few seconds to save the configuration to NVRAM. After the configuration has been saved, the following appears:

```
[OK]
uBR904#
```

Checking Settings and Reviewing Configuration Changes

You can check your settings and review any changes to your configuration using various software commands.

To check the value of the settings you have entered, enter the **show running-config** command at the **uBR904#** prompt:

```
uBR904# show running-config
Building configuration...

Current configuration:
!
version 11.3
no service pad
no service password-encryption
service udp-small-servers
service tcp-small-servers

To review changes you make to the configuration, use the EXEC `show startup-config` command to display the information stored in NVRAM.

**If You Need More Information**

The Cisco IOS software running the Cisco uBR904 cable modem contains extensive features and functionality. The effective use of these features is easier if you have more information at hand. For additional information on configuring the Cisco uBR904 cable modem, the following documentation resources are available:

- **Cisco Documentation CD-ROM**

  Cisco documentation and additional literature are available on a CD-ROM, which ships with your product. The Documentation CD-ROM, a member of the Cisco Connection Family, is updated monthly; therefore, it might be more up to date than printed documentation. To order additional copies of the Documentation CD-ROM, contact your local sales representative or call customer service. The CD-ROM is available as a single item or as an annual subscription. You can also access Cisco documentation on the World Wide Web at http://www.cisco.com, http://www-china.cisco.com, or http://www-europe.cisco.com.

  If you are reading Cisco product documentation on the World Wide Web, you can submit comments electronically. Click **Feedback** on the toolbar, and then select **Documentation**. After you complete the form, click **Submit** to send it to Cisco. We appreciate your comments.

- **For Cisco IOS software configuration information, refer to the modular configuration and modular command reference publications in the Cisco IOS software configuration documentation set that corresponds to the software release installed on your Cisco hardware. You can access Cisco IOS software configuration documentation on the World Wide Web at http://www.cisco.com, http://www-china.cisco.com, or http://www-europe.cisco.com.**

- **To obtain general information about documentation, refer to the Documentation CD-ROM or to Cisco Connection Online (CCO)—at the URL http://www.cisco.com. You can also call Customer Service at 800 553-6387 or 408 526-7208. Customer Service hours are 5:00 a.m. to 6:00 p.m. Pacific time, Monday through Friday (excluding company holidays). You can also send e-mail to cs-rep@cisco.com. You can also refer to the *Cisco Information Packet* that shipped with your cable modem.**
