## Preface

---

This preface includes the following sections:

- [Audience, page i](#)
- [Organization, page i](#)
- [Related Documentation, page ii](#)
- [Obtaining Documentation and Submitting a Service Request, page ii](#)

## Audience

This troubleshooting guide is designed for users who are responsible for troubleshooting issues that arise with a Cisco UCS instance.

## Organization

This reference guide is organized into the following parts and chapters:

- Cisco UCS Manager Faults
  - [Chapter 1, “Introduction to UCS Faults”](#)
  - [Chapter 2, “Cisco UCS Faults”](#)
  - [Chapter 3, “FSM Faults”](#)
  - [Chapter 4, “Call Home Faults in Cisco UCS Manager”](#)
  - [Chapter 5, “Troubleshooting Transient Faults”](#)
- Cisco UCS Manager SEL Messages
  - [Chapter 6, “Introduction to System Event Log Messages”](#)
  - [Chapter 7, “BIOS Messages”](#)
  - [Chapter 8, “Baseboard Management Controller Messages”](#)
- Cisco UCS Error Messages
  - [Chapter 9, “Cisco UCS Error Messages”](#)

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## Related Documentation

A roadmap that lists all documentation for the Cisco Unified Computing System (Cisco UCS) is available at the following URL:

[http://www.cisco.com/en/US/products/ps10477/products\\_documentation\\_roadmaps\\_list.html](http://www.cisco.com/en/US/products/ps10477/products_documentation_roadmaps_list.html)

## Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as an RSS feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

# CHAPTER 1

## Introduction to UCS Faults

---

This chapter provides an overview of faults in Cisco Unified Computing System (UCS). This chapter contains the following sections:

- [Overview of Faults, page 1-1](#)
- [Overview of the Finite State Machine, page 1-6](#)
- [Cisco Error Message Decoder, page 1-8](#)

**Note**

---

For NX-OS Fault messages, go to the [Cisco NX-OS System Messages Reference](#).

---

## Overview of Faults

This section includes the following topics:

- [About Faults in the Cisco UCS, page 1-1](#)
- [Fault Severities, page 1-2](#)
- [Fault Types, page 1-3](#)
- [Properties of Faults, page 1-3](#)
- [Lifecycle of Faults, page 1-4](#)
- [Fault Collection Policy, page 1-5](#)
- [Faults in Cisco UCS Manager, page 1-5](#)

## About Faults in the Cisco UCS

In the Cisco UCS, a fault is a mutable object that is managed by the Cisco UCS Manager. Each fault represents a failure in the Cisco UCS instance or an alarm threshold that has been raised. During the lifecycle of a fault, it can change from one state or severity to another.

Each fault includes information about the operational state of the affected object at the time the fault was raised. If the fault is transitional and the failure is resolved, then the object transitions to a functional state.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

A fault remains in the Cisco UCS Manager until the fault is cleared and deleted according to the settings in the fault collection policy.

You can view all faults in the Cisco UCS instance from either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI. You can also configure the fault collection policy to determine how a Cisco UCS instance collects and retains faults.

**Note**

All Cisco UCS faults can be trapped by SNMP.

## Fault Severities

A fault raised in a Cisco UCS instance can transition through more than one severity during its lifecycle. [Table 1-1](#) describes the possible fault severities in alphabetical order.

**Table 1-1** *Fault Severities in Cisco UCS*

| Severity  | Description  |
|-----------|--|
| Cleared   | A notification that the condition that caused the fault has been resolved, and the fault has been cleared.   |
| Condition | An informational message about a condition, possibly independently insignificant.  |
| Critical  | A service-affecting condition that requires immediate corrective action. For example, this severity could indicate that the managed object is out of service and its capability must be restored.  |
| Info      | A basic notification or informational message, possibly independently insignificant.   |
| Major     | A service-affecting condition that requires urgent corrective action. For example, this severity could indicate a severe degradation in the capability of the managed object and that its full capability must be restored.  |
| Minor     | A non-service-affecting fault condition that requires corrective action to prevent a more serious fault from occurring. For example, this severity could indicate that the detected alarm condition is not currently degrading the capacity of the managed object. |
| Warning   | A potential or impending service-affecting fault that currently has no significant effects in the system. Action should be taken to further diagnose, if necessary, and correct the problem to prevent it from becoming a more serious service-affecting fault.    |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## Fault Types

A fault raised in a Cisco UCS instance can be one of the types described in [Table 1-2](#).

**Table 1-2** *Types of Faults in Cisco UCS*

| Type          | Description   |
|---------------|---|
| fsm           | An FSM task has failed to complete successfully, or the Cisco UCS Manager is retrying one of the stages of the FSM.   |
| equipment     | The Cisco UCS Manager has detected that a physical component is inoperable or has another functional issue.   |
| server        | The Cisco UCS Manager is unable to complete a server task, such as associating a service profile with a server.   |
| configuration | The Cisco UCS Manager is unable to successfully configure a component.  |
| environment   | The Cisco UCS Manager has detected a power problem, thermal problem, voltage problem, or a loss of CMOS settings.   |
| management    | The Cisco UCS Manager has detected a serious management issue, such as one of the following: <ul style="list-style-type: none"> <li>• Critical services could not be started.</li> <li>• The primary switch could not be identified.</li> <li>• Components in the instance include incompatible firmware versions.</li> </ul> |
| connectivity  | The Cisco UCS Manager has detected a connectivity problem, such as an unreachable adapter.  |
| network       | The Cisco UCS Manager has detected a network issue, such as a link down.  |
| operational   | Cisco UCS Manager has detected an operational problem, such as a log capacity issue or a failed server discovery.   |

## Properties of Faults

The Cisco UCS Manager provides detailed information about each fault raised in a Cisco UCS instance. [Table 1-3](#) describes the fault properties that can be viewed in the Cisco UCS Manager CLI or the Cisco UCS Manager GUI.

**Table 1-3** *Fault Properties*

| Property Name   | Description   |
|-----------------|---|
| Severity        | The current severity level of the fault. This can be any of the severities described in <a href="#">Table 1-1 on page 1-2</a> .   |
| Last Transition | The day and time on which the severity for the fault last changed. If the severity has not changed since the fault was raised, this property displays the original creation date. |
| Affected Object | The component that is affected by the condition that raised the fault.  |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Table 1-3**      **Fault Properties**

| Property Name         | Description  |
|-----------------------|--|
| Description           | The description of the fault.  |
| ID                    | The unique identifier assigned to the fault.   |
| Status                | Additional information about the fault state. This can be any of the states described in <a href="#">Table 1-4 on page 1-5</a> . |
| Type                  | The type of fault that has been raised. This can be any of the types described in <a href="#">Table 1-2 on page 1-3</a> .        |
| Cause                 | The unique identifier associated with the condition that caused the fault.   |
| Created at            | The day and time when the fault occurred.  |
| Code                  | The unique identifier assigned to the fault.   |
| Number of Occurrences | The number of times the event that raised the fault occurred.  |
| Original Severity     | The severity assigned to the fault on the first time that it occurred.   |
| Previous Severity     | If the severity has changed, this is the previous severity.  |
| Highest Severity      | The highest severity encountered for this issue.   |

## Lifecycle of Faults

The faults in Cisco UCS are stateful, and a fault raised in a Cisco UCS instance transitions through more than one state during its lifecycle. In addition, only one instance of a given fault can exist on each object. If the same fault occurs a second time, the Cisco UCS increases the number of occurrences by one.

A fault has the following lifecycle:

1. A condition occurs in the system and the Cisco UCS raises a fault in the active state.
2. If the fault is alleviated within a short period of time known as the flap interval, the fault severity remains at its original active value but the fault enters the soaking state. The soaking state indicates that the condition that raised the fault has cleared, but the system is waiting to see whether the fault condition reoccurs.
3. If the condition reoccurs during the flap interval, the fault enters the flapping state. Flapping occurs when a fault is raised and cleared several times in rapid succession. If the condition does not reoccur during the flap interval, the fault is cleared.
4. Once cleared, the fault enters the retention interval. This interval ensures that the fault reaches the attention of an administrator even if the condition that caused the fault has been alleviated, and that the fault is not deleted prematurely. The retention interval retains the cleared fault for the length of time specified in the fault collection policy.
5. If the condition reoccurs during the retention interval, the fault returns to the active state. If the condition does not reoccur, the fault is deleted.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

When a fault is active, the additional lifecycle state information listed in [Table 1-4](#) may be provided in the Status field of the fault notification.

**Table 1-4** *Fault Lifecycle States*

| State    | Description   |
|----------|---|
| Soaking  | A fault was raised and then cleared within a short time known as the flap interval. Since this may be a flapping condition, the fault severity remains at its original active value, but this state indicates that the condition that raised the fault has cleared.<br><br>If the fault does not reoccur, the fault moves into the cleared state. Otherwise, the fault moves into the flapping state. |
| Flapping | A fault was raised, cleared, and then raised again within a short time known as the flap interval.  |

## Fault Collection Policy

The fault collection policy controls the lifecycle of a fault in the Cisco UCS instance, including the length of time that each fault remains in the flapping and retention intervals.

Tip

For information on how to configure the fault collection policy, see the Cisco UCS configuration guides, accessible through the [Cisco UCS B-Series Servers Documentation Roadmap](#).

## Faults in Cisco UCS Manager

This section includes the following topics:

- [Faults in Cisco UCS Manager GUI, page 1-5](#)
- [Faults in Cisco UCS Manager CLI, page 1-6](#)

### Faults in Cisco UCS Manager GUI

If you want to view the faults for a single object in the system, navigate to that object in the Cisco UCS Manager GUI and then click the Faults tab in the Work pane. If you want to view the faults for all objects in the system, navigate to the Faults node on the Admin tab under the Faults, Events and Audit Log.

In addition, a summary of all faults can be viewed in a Cisco UCS instance. Go to the Fault Summary area in the upper left of the Cisco UCS Manager GUI. This area provides a summary of all faults that have occurred in the Cisco UCS instance.

Each fault severity is represented by a different icon. The number below each icon indicates how many faults of that severity have occurred in the system. When you click an icon, the Cisco UCS Manager GUI opens the Faults tab in the Work pane and displays the details of all faults with that severity.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## Faults in Cisco UCS Manager CLI

If you want to view the faults for all objects in the system, at the top-level scope, enter the **show fault** command. If you want to view faults for a specific object, scope to that object and then enter the **show fault** command.

If you want to view all of the available details about a fault, enter the **show fault detail** command.

# Overview of the Finite State Machine

This section includes the following topics:

- [About the Finite State Machine in Cisco UCS, page 1-6](#)
- [FSM Stage Names, page 1-7](#)
- [FSM in Cisco UCS Manager, page 1-7](#)

## About the Finite State Machine in Cisco UCS

A finite state machine (FSM) is a workflow model, similar to a flow chart, that is composed of the following:

- Finite number of stages (states)
- Transitions between those stages
- Operations

The current stage in the FSM is determined by past stages and the operations performed to transition between the stages. A transition from one stage to another stage is dependent on the success or failure of an operation.

Cisco UCS Manager uses FSM tasks that run in the Data Management Engine (DME) to manage end points in the UCS object model, including the following:

- Physical components (chassis, I/O module, servers)
- Logical components (LAN cloud, policies)
- Workflows (server discovery, service profile management, downloads, upgrades, backups)

The DME manages the FSM stages and transition, and instructs the Application Gateway (AG) to perform operations on the managed end points. Therefore, each stage can be considered to be an interaction between the DME, the AG, and the managed end point. The AGs do the real work of interacting with managed end points, such as the CIMC, the adapter, or the I/O module

When all of the FSM stages have run successfully, the Cisco UCS considers that the FSM operation is successful.

If the FSM encounters an error or a timeout at a stage, the FSM retries that stage at scheduled intervals. When the retry count has been reached for that stage, the FSM stops and the Cisco UCS Manager declares that the change have failed. If an FSM task fails, the Cisco UCS Manager raises the appropriate faults and alarms.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

The mMultiple FSM tasks can be associated to an end point. However, only one FSM task at a time can run. Additional FSM tasks for the same end point are placed in a queue and are scheduled to be run when the previous FSM task is either successfully completed or the task fails.

You can view the FSM details for a particular end point to determine if a task succeeded or failed. You can also use the FSM to troubleshoot any failures.

## **FSM Stage Names**

The FSM stage names are constructed using the following notation

**FsmObjectWorkflowOperationWhere-is-it-executed**

where:

- *Object* is the object that the FSM is running, such as the Blade or Chassis.
- *Workflow* is the overall task being performed by the FSM, such as Discover or Association.
- *Operation* is the task being performed at a particular stage, such as Pnuos-Config.
- *Where-is-it-executed* is generally “”, or “A” or “B” or “Local” or “Peer”. If this is not specified, it is executed on the managingInst node.

Each FSM stage name has a prefix that identifies the FSM and a suffix that identifies a stage within the FSM. The prefix notation is **FsmObjectWorkflow** and the suffix notation is *OperationWhere-is-it-executed*. For example, if the FSM name is

**FsmComputeBladeDiscoverBmcInventory:**

- The prefix is **FsmComputeBladeDiscover**
- The suffix is **BmcInventory**

## **FSM in Cisco UCS Manager**

This section includes the following topics:

- [FSM in the Cisco UCS Manager GUI, page 1-7](#)
- [FSM in the Cisco UCS Manager CLI, page 1-8](#)

### **FSM in the Cisco UCS Manager GUI**

The Cisco UCS Manager GUI displays the FSM information for an end point on the FSM tab for that end point. You can use the FSM tab to monitor the progress and status of the current FSM task and view a list of the pending FSM tasks.

The information about a current FSM task in the Cisco UCS Manager GUI is dynamic and changes as the task progresses. You can view the following information about the current FSM task:

- FSM task being executed
- Current state of that task
- Time and status of the previously completed task
- Any remote invocation error codes returned while processing the task
- Progress of the current task

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

To view the FSM task for an end point that supports FSM, navigate to the end point in the Navigation pane and click on the FSM tab in the Work pane.

## FSM in the Cisco UCS Manager CLI

The Cisco UCS Manager CLI can display the FSM information for an end point when you are in the command mode for that end point.

Enter the **show fsm status** command in the appropriate mode to view the current FSM task for an end point. The information displayed about a current FSM task in the CLI is static. You must re-enter the command to see the progress updates. The following example displays the information about the current FSM task for the server in chassis 1, slot 6:

```
UCS-A# scope server 1/6
UCS-A /chassis/server # show fsm status
Slot: 6
Server: sys/chassis-1/blade-6
  FSM 1:
    Remote Result: Not Applicable
    Remote Error Code: None
    Remote Error Description:
    Status: Discover Blade Boot Wait
    Previous Status: Discover Blade Boot Wait
    Timestamp: 2006-01-26T23:31:36
    Try: 0
    Flags: 0
    Progress (%): 33
    Current Task: Waiting for system reset on server 1/6
(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootWait)
```

Enter the **show fsm task** command in the appropriate mode to view all of the pending tasks in the FSM queue. The following example displays the FSM task queue for the server in chassis 1, slot 6:

```
UCS-A# scope server 1/6
UCS-A /chassis/server # show fsm task

FSM Task:
  Item                ID          Completion  FSM Flags
  -----
  Powercycle          1154858    Scheduled
  BiosRecovery        1154860    Scheduled
```

## Cisco Error Message Decoder

The Error Message Decoder parses published System Message Guides and provides easy error message search capabilities for Cisco customers.

To use the Error Message Decoder:

- 
- Step 1** Click the following link: <http://www.cisco.com/cgi-bin/Support/Errordecoder/index.cgi>
  - Step 2** Log in.
  - Step 3** Paste the error message into the field indicated.
  - Step 4** Click **Submit**.
-

## CHAPTER 2

# Cisco UCS Faults

---

This chapter provides information about the faults that may be raised in a Cisco UCS instance.

This chapter contains the following sections:

- [Adapter-Related Faults, page 2-2](#)
- [Chassis-Related Faults, page 2-9](#)
- [Chassis Slot-Related Faults, page 2-17](#)
- [Cisco UCS Manager-Related Faults, page 2-18](#)
- [Ethernet-Related Faults, page 2-19](#)
- [Fabric Extender \(FEX\)-Related Faults, page 2-21](#)

## Adapter-Related Faults

This section contains faults raised as a result of issues with the adapters in a server.

### fltAdaptorExtEthIfMisConnect

**Fault Code:**F0625

#### Message

Adapter [id] eth interface [id] in server [id] mis-connected

#### Explanation

The link for a network-facing adapter interface is misconnected. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager detects a new connectivity between a previously configured switch port or FEX port and the adapter's external interface.
- Cisco UCS Manager detects a misconnected link between a fabric interconnect or FEX and its non-peer adapter's interface.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check whether the adapter link is connected to a port that belongs to its peer fabric interconnect or FEX.
- Step 2** If that connectivity seems correct, reacknowledge the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** link-misconnected  
**CallHome:** none  
**mibFaultCode:** 625  
**mibFaultName:** fltAdaptorExtEthIfMisConnect  
**moClass:** adaptor:ExtEthIf  
**Type:** network

### fltAdaptorExtEthIfMissing

**Fault Code:**F0775

#### Message

Connection to Adapter [id] eth interface [id] in server [id] missing

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

The link for a network-facing adapter interface is misconnected. Cisco UCS Manager raises this fault when it detects that the connectivity between a previously configured port on a fabric interconnect or FEX and its prior peer network-facing adapter interface is misconnected or missing.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check whether the adapter interface is connected to a port belonging to its peer fabric interconnect or FEX.
  - Step 2** If the connectivity seems correct, reacknowledge the server.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** warning  
**Cause:** link-missing  
**CallHome:** none  
**mibFaultCode:** 775  
**mibFaultName:** fltAdaptorExtEthIfMissing  
**moClass:** adaptor:ExtEthIf  
**Type:** network

## fltAdaptorExtIfLink-down

### Fault Code:F0209

### Message

Adapter uplink interface [id]/[id]/[id] link state: [linkState]Adapter uplink interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]

### Explanation

The link for a network facing adapter interface is down. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager cannot establish and/or validate the adapter's connectivity to any of the fabric interconnects.
- The endpoint reports a link down or vNIC down event on the adapter link.
- The endpoint reports an errored link state or errored vNIC state event on the adapter link.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the adapter is connected, configured properly, and is running the recommended firmware version.
  - Step 2** If the server is stuck at discovery, decommission the server and reacknowledge the server slot.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

**Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

---

### Fault Details

```
Severity: major
Cause: link-down
CallHome: none
mibFaultCode: 209
mibFaultName: fltAdaptorExtIfLinkDown
moClass: adaptor:ExtIf
Type: network
```

## fltAdaptorHostEthIfMisConnect

**Fault Code:**F0626

### Message

Adapter [id] eth interface [id] in server [id] mis-connected

### Explanation

The link for a network-facing host interface is misconnected. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager detects a new connectivity between a previously configured switch port and the host Ethernet interface.
- Cisco UCS Manager detects a misconnected link between the host interface and its non-peer fabric interconnect.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check whether the host Ethernet interface is connected to a port belonging to its peer fabric interconnect.
- Step 2** If connectivity seems correct, reacknowledge the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: warning
Cause: link-misconnected
CallHome: none
mibFaultCode: 626
mibFaultName: fltAdaptorHostEthIfMisConnect
moClass: adaptor:HostEthIf
Type: network
```

## fltAdaptorHostEthIfMissing

**Fault Code:**F0708

### Message

Connection to Adapter [id] eth interface [id] in server [id] missing

### Explanation

The link for a network-facing host interface is missing. Cisco UCS Manager raises this fault when it detects missing connectivity between a previously configured switch port and its previous peer host interface.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check whether the adapter link is connected to a port that belongs to its non-peer fabric interconnect.
- Step 2** If that connectivity seems correct, reacknowledge the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: warning
Cause: link-missing
CallHome: none
mibFaultCode: 708
mibFaultName: fltAdaptorHostEthIfMissing
moClass: adaptor:HostEthIf
Type: network
```

## fltAdaptorHostIfLink-down

**Fault Code:**F0207

### Message

Adapter [transport] host interface [id]/[id]/[id] link state: [linkState]Adapter [transport] host interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]

### Explanation

This fault typically occurs as a result of one of the following issues:

- The fabric interconnect is in End-Host mode, and all uplink ports failed.
- The server port to which the adapter is pinned failed.
- A transient error caused the link to fail.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If an associated port is disabled, enable the port.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- Step 2** Reacknowledge the server with the adapter that has the failed link.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: link-down
CallHome: none
mibFaultCode: 207
mibFaultName: fltAdaptorHostIfLinkDown
moClass: adaptor:HostIf
Type: network
```

## fltAdaptorUnitAdaptorReachability

**Fault Code:**F0206

### Message

Adapter [id]/[id] is unreachableAdapter [chassisId]/[slotId]/[id] is unreachable

### Explanation

Cisco UCS Manager cannot access the adapter. This fault typically occurs as a result of one of the following issues:

- The server does not have sufficient power.
- The I/O module is not functional.
- The adapter firmware has failed.
- The adapter is not functional

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
- Step 2** In Cisco UCS Manager, check the power state of the server.
- Step 3** Verify that the physical server has the same power state.
- Step 4** If the server is off, turn the server on.
- Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: info
Cause: connectivity-problem
CallHome: diagnostic
mibFaultCode: 206
mibFaultName: fltAdaptorUnitAdaptorReachability
moClass: adaptor:Unit
```

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

**Type:** connectivity

### fltAdaptorUnitExtnMissing

**Fault Code:**F0901

#### Message

Adapter extension [id] in server [chassisId]/[slotId] presence: [presence]

#### Explanation

This fault typically occurs when an I/O adapter unit extension, such as a pass-through adapter, is missing. Cisco UCS Manager raises this fault when any of the following scenario occur:

- The endpoint reports there is no adapter unit extension, such as a pass-through adapter, plugged into the adapter slot.
- The endpoint cannot detect or communicate with the adapter unit extension plugged into the adapter slot.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Ensure the adapter unit extension is properly plugged into an adapter slot in the server.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** equipment-missing  
**CallHome:** none  
**mibFaultCode:** 901  
**mibFaultName:** fltAdaptorUnitExtnMissing  
**moClass:** adaptor:UnitExtn  
**Type:** equipment

### fltAdaptorUnitExtnUnidentifiable-fru

**Fault Code:**F0900

#### Message

Adapter extension [id] in server [chassisId]/[slotId] has unidentified FRU

#### Explanation

This fault typically occurs because Cisco UCS Manager has detected an unsupported adapter unit extension, such as a pass-through adaptor. For example, the model, vendor, or revision is not recognized.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that a supported adapter unit extension is installed.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- Step 2** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
- Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: unidentifiable-fru
CallHome: none
mibFaultCode: 900
mibFaultName: fltAdaptorUnitExtnUnidentifiableFru
moClass: adaptor:UnitExtn
Type: server
```

## fltAdaptorUnitMissing

### Fault Code:F0203

### Message

Adapter [id] in server [id] presence: [presence]Adapter [id] in server [chassisId]/[slotId] presence: [presence]

### Explanation

The adaptor is missing. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The endpoint reports there is no adaptor in the adaptor slot.
- The endpoint cannot detect or communicate with the adaptor in the adaptor slot.

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Make sure an adaptor is inserted in the adaptor slot in the server.
- Step 2** Check whether the adaptor is connected and configured properly and is running the recommended firmware version.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: warning
Cause: equipment-missing
CallHome: none
mibFaultCode: 203
mibFaultName: fltAdaptorUnitMissing
moClass: adaptor:Unit
Type: equipment
```

mibFaultCode: 200
mibFaultName: fltAdaptorUnitUnidentifiableFru
moClass: adaptor:Unit
Type: server
```

## Chassis-Related Faults

This section contains faults raised as a result of issues related to a chassis in the Cisco UCS instance.

### fltEquipmentChassisIdentity

**Fault Code:**F0404

### Message

Chassis [id] has a mismatch between FRU identity reported by Fabric/IOM vs. FRU identity reported by CMC

### Explanation

This fault typically occurs when the FRU information for an I/O module is corrupted or malformed.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

```
Severity: critical
Cause: fru-problem
CallHome: diagnostic
mibFaultCode: 404
mibFaultName: fltEquipmentChassisIdentity
moClass: equipment:Chassis
Type: equipment
```

## **fltEquipmentChassisIdentity-unestablishable**

**Fault Code:**F0543

### **Message**

Chassis [id] has an invalid FRU

### **Explanation**

This fault typically occurs because Cisco UCS Manager has detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
- Step 2** If the above action did not resolve the issue, execute the **show tech-support** command and contact Cisco technical support.
- 

### **Fault Details**

```
Severity: major
Cause: identity-unestablishable
CallHome: none
mibFaultCode: 543
mibFaultName: fltEquipmentChassisIdentityUnestablishable
moClass: equipment:Chassis
Type: equipment
```

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fltEquipmentChassisInoperable

**Fault Code:**F0456

### Message

Chassis [id] operability: [operability]

### Explanation

This fault typically occurs for one of the following reasons:

- The fabric interconnect cannot communicate with a chassis. For a cluster configuration, this fault means that neither fabric interconnect can communicate with the chassis.
- The chassis has an invalid FRU.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In Cisco UCS Manager, reacknowledge the chassis that raised the fault.
- Step 2** Physically unplug and replug the power cord into the chassis.
- Step 3** Verify that the I/O modules are functional.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** equipment-inoperable  
**CallHome:** diagnostic  
**mibFaultCode:** 456  
**mibFaultName:** fltEquipmentChassisInoperable  
**moClass:** equipment:Chassis  
**Type:** equipment

## fltEquipmentChassisPowerProblem

**Fault Code:**F0408

### Message

Power state on chassis [id] is [power]

### Explanation

This fault typically occurs when the chassis fails to meet the minimal power requirements defined in the power policy or when one or more power supplies have failed.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In Cisco UCS Manager, verify that all PSUs for the chassis are functional.
- Step 2** Verify that all PSUs are seated properly within the chassis and are powered on.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- Step 3** Physically unplug and replug the power cord into the chassis.
- Step 4** If all PSUs are operating at maximum capacity, either add more PSUs to the chassis or redefine the power policy in Cisco UCS Manager.
- Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** power-problem  
**CallHome:** environmental  
**mibFaultCode:** 408  
**mibFaultName:**fltEquipmentChassisPowerProblem  
**moClass:** equipment:Chassis  
**Type:** environmental

## fltEquipmentChassisSeeprom-inoperable

**Fault Code:**F0733

### Message

Device [id] SEEPROM operability: [seepromOperState]

### Explanation

This fault occurs in the unlikely event that the Chassis shared storage (SEEPROM) is not operational.

### Recommended Action

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

---

### Fault Details

**Severity:** critical  
**Cause:** equipment-inoperable  
**CallHome:** diagnostic  
**mibFaultCode:** 733  
**mibFaultName:**fltEquipmentChassisSeepromInoperable  
**moClass:** equipment:Chassis  
**Type:** equipment

## fltEquipmentChassisThermalThresholdCritical

**Fault Code:**F0409

### Message

Thermal condition on chassis [id] cause: [thermalStateQualifier]

### Explanation

This fault occurs under the following conditions:

- If a component within a chassis is operating outside the safe thermal operating range.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
  - Step 2** If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
  - Step 3** If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
  - Step 4** If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
  - Step 5** If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
  - Step 6** If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco UCS Manager and the chassis and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: thermal-problem
CallHome: environmental
mibFaultCode: 409
mibFaultName: fltEquipmentChassisThermalThresholdCritical
moClass: equipment:Chassis
Type: environmental
```

## fltEquipmentChassisThermalThresholdNonCritical

**Fault Code:**F0410

### Message

Thermal condition on chassis [id] cause: [thermalStateQualifier]

### Explanation

UCSM raises this fault under the following conditions:

- If a component within a chassis is operating outside the safe thermal operating range.
- If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
  - Step 2** If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
  - Step 3** If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
  - Step 4** If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
  - Step 5** If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
  - Step 6** If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco UCS Manager and the chassis and contact Cisco TAC.
-

## fltEquipmentChassisUnacknowledged

**Fault Code:**F0400

### Message

Chassis [id] connectivity configuration: [configState]

### Explanation

This fault typically occurs when or more of the I/O module links from the chassis are unacknowledged.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the state of the I/O module links.
  - Step 2** Reacknowledge the chassis.
  - Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## Chassis Slot-Related Faults

This section contains faults raised as a result of issues with a server slot in a chassis.

### fltFabricComputeSlotEpMisplacedInChassisSlot

**Fault Code:**F0156

#### Message

Server, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId] presence: [presence]

#### Explanation

This fault typically occurs when Cisco UCS Manager detects a server in a chassis slot that does not match what was previously equipped in the slot.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the previous server was intentionally removed and a new one was inserted, reacknowledge the server.
- Step 2** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** server-moved

### fltMgmtPmonEntryUCSM process failure

**Fault Code:**F0867

#### Message

UCSM process [name] failed on FI [switchId]

#### Explanation

This fault occurs in an unlikely event of a Cisco UCS Manager process crash. Typically, the failed process restarts and recovers from the problem. Any pending operations are restarted after the process successfully restarts.

#### Recommended Action

If you see this fault and the process does not restart successfully, create a **show tech-support** file and contact Cisco TAC.

---

#### Fault Details

**Severity:** critical  
**Cause:** ucsm-process-failure  
**CallHome:** none  
**mibFaultCode:** 867  
**mibFaultName:** fltMgmtPmonEntryUCSMProcessFailure

## Ethernet-Related Faults

This section contains faults raised as a result of issues with the Ethernet configuration for a vNIC.

### fltEtherServerIntFioHardware-failure

**Fault Code:**F0458

#### Message

IOM [transport] interface [portId] on chassis [id] oper state: [operState], reason: [stateQual]Fabric Interconnect [transport] interface [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]IOM [transport] interface [portId] on fex [id] oper state: [operState], reason: [stateQual]

#### Explanation

This fault is raised on the IOM/FEX backplane ports when Cisco UCS Manager detects a hardware failure.

#### Recommended Action

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

---

#### Fault Details

**Severity:** major  
**Cause:** interface-failed  
**CallHome:** none  
**mibFaultCode:** 458  
**mibFaultName:** fltEtherServerIntFioHardwareFailure  
**moClass:** ether:ServerIntFio  
**Type:** network

### fltFabricEthEstcPcEpDown

**Fault Code:**F0777

#### Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

#### Explanation

This fault typically occurs when a member port in an Ethernet port channel is down.

#### Recommended Action

If you see this fault, take the following action:

---

- Step 1** Check the link connectivity on the upstream Ethernet switch.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** major  
**Cause:** membership-down  
**CallHome:** none  
**mibFaultCode:** 777  
**mibFaultName:** fltFabricEthEstcPcEpDown  
**moClass:** fabric:EthEstcPcEp  
**Type:** network

## fltFabricEthLanPcEpDown

**Fault Code:**F0727

#### Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

#### Explanation

This fault typically occurs when a member port in an Ethernet port channel is down.

#### Recommended Action

If you see this fault, take the following action:

- 
- Step 1** Check the link connectivity on the upstream Ethernet switch.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major  
**Cause:** membership-down  
**CallHome:** none  
**mibFaultCode:** 727  
**mibFaultName:** fltFabricEthLanPcEpDown  
**moClass:** fabric:EthLanPcEp  
**Type:** network

## fltVnicEtherConfig-failed

**Fault Code:**F0169

#### Message

Eth vNIC [name], service profile [name] failed to apply configuration

#### Explanation

This fault typically occurs when Cisco UCS Manager could not place the vNIC on the vCon.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the server was successfully discovered.
  - Step 2** Verify that the correct type of adapters are installed on the server.
  - Step 3** Confirm that the vCon assignment is correct.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** minor  
**Cause:** configuration-failed  
**CallHome:** none  
**mibFaultCode:** 169  
**mibFaultName:** fltVnicEtherConfigFailed  
**moClass:** vnic:Ether  
**Type:** configuration

## Fabric Extender (FEX)-Related Faults

This section contains faults raised as a result of issues related to a fabric extender module in the Cisco UCS instance.

### fltEquipmentFexFex-unsupported

**Fault Code:**F0905

#### Message

Fex [id] with model [model] is unsupported

#### Explanation

This fault typically occurs because Cisco UCS Manager has detected an unsupported FEX. For example, the model, vendor, or revision is not recognized.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that a supported FEX is installed.
  - Step 2** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
  - Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major  
**Cause:** fex-unsupported  
**CallHome:** none

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

moClass: equipment:Fex
Type: equipment
```

## fltEquipmentFexIdentity

**Fault Code:**F0703

### Message

Fex [id] has a malformed FRU

### Explanation

This fault typically occurs when the FRU information for a FEX is corrupted or malformed.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: critical
Cause: fru-problem
CallHome: diagnostic
mibFaultCode: 703
mibFaultName: fltEquipmentFexIdentity
moClass: equipment:Fex
Type: equipment
```

## fltEquipmentFexIdentity-unestablishable

**Fault Code:**F0778

### Message

Fex [id] has an invalid FRU

### Explanation

This fault typically occurs because Cisco UCS Manager detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** major  
**Cause:** identity-unestablishable  
**CallHome:** none  
**mibFaultCode:** 778  
**mibFaultName:** fltEquipmentFexIdentityUnestablishable  
**moClass:** equipment:Fex  
**Type:** equipment

## fltEquipmentFexPost-failure

**Fault Code:**F0702

#### Message

fex [id] POST failure

#### Explanation

This fault typically occurs when a FEX encounters errors during the Power On Self Test (POST). The impact of this fault varies depending on which errors were encountered during POST.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the POST results for the FEX. In the Cisco UCS Manager GUI, you can access the POST results from the General tab for the FEX. In the Cisco UCS Manager CLI, you can access the POST results by entering the **show post** command under the scope for the FEX.
  - Step 2** Reboot the FEX.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major  
**Cause:** equipment-problem  
**CallHome:** diagnostic  
**mibFaultCode:** 702  
**mibFaultName:** fltEquipmentFexPostFailure

## Fabric Interconnect-Related Faults

This section contains faults raised as a result of issues with a fabric interconnect.

### fltEtherSwitchIntFloSatellite-wiring-problem

**Fault Code:**F0368

#### Message

Invalid connection between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

#### Explanation

This fault typically occurs as a result of a satellite wiring problem on the network-facing interface of an I/O module and Cisco UCS Manager detects that at least one IOM uplink is misconnected to one of the fabric interconnect ports.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
  - Step 2** Ensure that the links are plugged in properly and re-acknowledge the chassis.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

```
Severity: info
Cause: satellite-mis-connected
CallHome: none
mibFaultCode: 368
mibFaultName: fltEtherSwitchIntFioSatelliteWiringProblem
moClass: ether:SwitchIntFio
Type: connectivity
```

### fltEtherSwitchIntFloSatellite-wiring-numbers-unexpected

**Fault Code:**F0440

#### Message

Chassis discovery policy conflict: Link IOM [chassisId]/[slotId]/[portId] to fabric interconnect [switchId]:[peerSlotId]/[peerPortId] not configured

#### Explanation

The configuration of the chassis discovery policy conflicts with the physical IOM uplinks. Cisco UCS Manager raises this fault when the chassis discovery policy is configured for more links than are physically cabled between the IOM uplinks on the chassis and the fabric interconnect.

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Ensure that you cable at least the same number of IOM uplinks as are configured in the chassis discovery policy, and that you configure the corresponding server ports on the fabric interconnect.
  - Step 2** Reacknowledge the chassis.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```

## fltExtmgmtIfMgmtifdown

**Fault Code:**F0736

### Message

Management interface on Fabric Interconnect [id] is [operState]

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault occurs when a fabric interconnect reports that the operational state of an external management interface is down.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the state transitions of the external management interface on the fabric interconnect.
  - Step 2** Check the link connectivity for the external management interface.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltMgmtEntityDegraded

**Fault Code:**F0293

### Message

Fabric Interconnect [id], HA Cluster interconnect link failure

### Explanation

This fault occurs when one of the cluster links (either L1 or L2) of a fabric interconnect is not operationally up. This issue impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that both L1 and L2 links are properly connected between the fabric interconnects.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## fltMgmtEntityDown

**Fault Code:**F0294

### Message

Fabric Interconnect [id], HA Cluster interconnect total link failure

### Explanation

This fault occurs when both cluster links (L1 and L2) of the fabric interconnects are in a link-down state. This issue impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Verify that both L1 and L2 links are properly connected between the fabric interconnects.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** link-down  
**CallHome:** diagnostic

## fltMgmtEntityElection-failure

**Fault Code:**F0428

### Message

Fabric Interconnect [id], election of primary management instance has failed

### Explanation

This fault occurs in an unlikely event that the fabric interconnects in a cluster configuration could not reach an agreement for selecting the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the initial setup configuration is correct on both fabric interconnects.
  - Step 2** Verify that the L1 and L2 links are properly connected between the fabric interconnects.
  - Step 3** In the Cisco UCS Manager CLI, run the **cluster force primary** local-mgmt command on one fabric interconnect.
  - Step 4** Reboot the fabric interconnects.
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** election-failure  
**CallHome:** diagnostic  
**mibFaultCode:** 428  
**mibFaultName:** fltMgmtEntityElectionFailure  
**moClass:** mgmt:Entity  
**Type:** management

## fltMgmtEntityHa-not-ready

**Fault Code:**F0429

### Message

Fabric Interconnect [id], HA functionality not ready

### Explanation

This fault occurs if Cisco UCS Manager cannot discover or communicate with one or more chassis or rack servers to write the HA Cluster state. This impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the initial setup configuration is correct on both fabric interconnects.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- Step 2** Verify that the L1 and L2 links are properly connected between the fabric interconnects.
  - Step 3** Verify that the IOMs and/or FEXes are reachable and the server ports are enabled and operationally up.
  - Step 4** Verify that the chassis and/or rack servers are powered up and reachable
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** ha-not-ready  
**CallHome:** none  
**mibFaultCode:** 429  
**mibFaultName:** fltMgmtEntityHaNotReady  
**moClass:** mgmt:Entity  
**Type:** management

## fltMgmtEntityHa-ssh-keys-mismatched

**Fault Code:**F0866

### Message

Fabric Interconnect [id], management services, mismatched SSH keys

### Explanation

This fault indicates that one of the following scenarios has occurred:

- The internal SSH keys used for HA in the cluster configuration are mismatched. This causes certain operations to fail.
- Another fabric interconnect is connected to the primary fabric interconnect in the cluster without first erasing the existing configuration in the primary.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Log into the Cisco UCS Manager CLI on the subordinate fabric interconnect.
  - Step 2** Enter **connect local-mgmt**
  - Step 3** Enter **erase configuration** to erase the configuration on the subordinate fabric interconnect and reboot it.
  - Step 4** When the secondary fabric interconnect has rebooted, reconfigure it for the cluster.
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** ha-ssh-keys-mismatched  
**CallHome:** none  
**mibFaultCode:** 866  
**mibFaultName:** fltMgmtEntityHaSshKeysMismatched

**Type:** management

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fltMgmtEntityManagement-services-failure

**Fault Code:**F0451

### Message

Fabric Interconnect [id], management services have failed

### Explanation

This fault occurs in an unlikely event that management services fail on a fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the initial setup configuration is correct on both fabric interconnects.
  - Step 2** Verify that the L1 and L2 links are properly connected between the fabric interconnects.
  - Step 3** Reboot the fabric interconnects.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** management-services-failure  
**CallHome:** diagnostic  
**mibFaultCode:** 451  
**mibFaultName:** fltMgmtEntityManagementServicesFailure  
**moClass:** mgmt:Entity  
**Type:** management

## fltMgmtEntityManagement-services-unresponsive

**Fault Code:**F0452

### Message

Fabric Interconnect [id], management services are unresponsive

### Explanation

This fault occurs when management services on a fabric interconnect are unresponsive. This impacts the full HA functionality of the fabric interconnect cluster.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the initial setup configuration is correct on both fabric interconnects.
  - Step 2** Verify that the L1 and L2 links are properly connected between the fabric interconnects.
  - Step 3** Reboot the fabric interconnects.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

---

#### Fault Details

**Severity:** critical  
**Cause:** management-services-unresponsive  
**CallHome:** diagnostic  
**mibFaultCode:** 452  
**mibFaultName:** fltMgmtEntityManagementServicesUnresponsive  
**moClass:** mgmt:Entity  
**Type:** management

## fltMgmtEntityVersion-incompatible

**Fault Code:**F0430

#### Message

Fabric Interconnect [id], management services, incompatible versions

#### Explanation

This fault occurs if the Cisco UCS Manager software on the subordinate fabric interconnect is not the same release as that of the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

#### Recommended Action

If you see this fault, take the following actions:

---

**Step 1** Upgrade the Cisco UCS Manager software on the subordinate fabric interconnect to the same release as the primary fabric interconnect and verify that both fabric interconnects are running the same release of Cisco UCS Manager.

**Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

---

#### Fault Details

**Severity:** critical  
**Cause:** version-incompatible  
**CallHome:** diagnostic  
**mibFaultCode:** 430  
**mibFaultName:** fltMgmtEntityVersionIncompatible  
**moClass:** mgmt:Entity  
**Type:** management

## fltNetworkElementInoperable

**Fault Code:**F0291

#### Message

Fabric Interconnect [id] operability: [operability]

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault typically occurs when the fabric interconnect cluster controller reports that the membership state of the fabric interconnect is down, indicating that the fabric interconnect is inoperable.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that both fabric interconnects in the cluster are running the same Kernel and System software versions.
  - Step 2** Verify that the fabric interconnects software version and the Cisco UCS Manager software versions are the same.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** equipment-inoperable  
**CallHome:** diagnostic  
**mibFaultCode:** 291  
**mibFaultName:** fltNetworkElementInoperable  
**moClass:** network:Element  
**Type:** equipment

## fltNetworkElementInventoryFailed

**Fault Code:**F0885

### Message

Fabric Interconnect [id] inventory is not complete: [inventoryStatus]

### Explanation

Cisco UCS Manager raises this fault when the management subsystem is unable to perform an inventory of the physical components, such as I/O cards or physical ports.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Ensure that both fabric interconnects in an HA cluster are running the same software versions.
  - Step 2** Ensure that the fabric interconnect software is a version that is compatible with the Cisco UCS Manager software.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## Fan-Related Faults

This section contains faults raised as a result of issues related to a fan or fan module in the Cisco UCS instance.

### fltEquipmentFanDegraded

#### Fault Code:F0371

#### Message

Fan [id] in Fan Module [tray]-[id] under chassis [id] operability: [operability]Fan [id] in fabric interconnect [id] operability: [operability]Fan [id] in fex [id] operability: [operability]Fan [id] in Fan Module [tray]-[id] under server [id] operability: [operability]

#### Explanation

This fault occurs when one or more fans in a fan module are not operational, but at least one fan is operational.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the fan module.
  - Step 2** Review the Cisco UCS Site Preparation Guide and ensure the fan module has adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace the faulty fan modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

### Message

Fan [id] in Fan Module [tray]-[id] under chassis [id] operability: [operability]Fan [id] in fabric interconnect [id] operability: [operability]Fan [id] in fex [id] operability: [operability]Fan [id] in Fan Module [tray]-[id] under server [id] operability: [operability]

### Explanation

This fault occurs if a fan is not operational.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Remove fan module and re-install the fan module again. Remove only one fan module at a time.
  - Step 2** Replace fan module with a different fan module
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-inoperable  
**CallHome:** environmental  
**mibFaultCode:** 373

## fltEquipmentFanMissing

**Fault Code:**F0434

### Message

Fan [id] in fabric interconnect [id] presence: [presence]Fan [id] in fex [id] presence: [presence]Fan [id] in Fan Module [tray]-[id] under server [id] presence: [presence]

### Explanation

This fault occurs in the unlikely event that a fan in a fan module cannot be detected.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Insert/reinsert the fan module in the slot that is reporting the issue.
  - Step 2** Replace the fan module with a different fan module, if available.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## fltEquipmentFanModuleDegraded

### Fault Code:F0480

### Message

Fan module [tray]-[id] in chassis [id] operability: [operability]Fan module [tray]-[id] in server [id] operability: [operability]Fan module [tray]-[id] in fabric interconnect [id] operability: [operability]

### Explanation

This fault occurs when a fan module is not operational.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the fan module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the fan module has adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows for the fan module are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 8** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltEquipmentFanModuleThermalThresholdCritical

**Fault Code:**F0382

### Message

Fan module [tray]-[id] in chassis [id] temperature: [thermal]Fan module [tray]-[id] in server [id] temperature: [thermal]Fan module [tray]-[id] in fabric interconnect [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a fan module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the fan module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the fan modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace faulty fan modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltEquipmentFanModuleThermalThresholdNonCritical

**Fault Code:**F0380

### Message

Fan module [tray]-[id] in chassis [id] temperature: [thermal]Fan module [tray]-[id] in server [id] temperature: [thermal]Fan module [tray]-[id] in fabric interconnect [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a fan module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the fan module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the fan modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace faulty fan modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## fltEquipmentFanModuleThermalThresholdNonRecoverable

**Fault Code:**F0384

### Message

Fan module [tray]-[id] in chassis [id] temperature: [thermal]Fan module [tray]-[id] in server [id] temperature: [thermal]Fan module [tray]-[id] in fabric interconnect [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a fan module has been out of operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the fan module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the fan modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace faulty fan modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## fltEquipmentFanPerfThresholdCritical

**Fault Code:**F0396

### Message

Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

### Explanation

This fault occurs when the fan speed read from the fan controller does not match the desired fan speed and has exceeded the critical threshold and is in risk of failure. This can indicate a problem with a fan or with the reading from the fan controller.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Monitor the fan status.
  - Step 2** If the problem persists for a long period of time or if other fans do not show the same problem, reseal the fan.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file for the chassis and contact Cisco TAC.
- 

### Fault Details

## fltEquipmentFanPerfThresholdLowerNonRecoverable

**Fault Code:**F0484

### Message

Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

### Explanation

This fault occurs when the fan speed reading from the fan controller is far below the desired fan speed, and the fan has likely failed.

### Recommended Action

If you see this fault, create a detailed **show tech-support** file for the chassis and replace the fan module. If necessary, contact Cisco TAC.

## fltEquipmentFanPerfThresholdNonCritical

**Fault Code:**F0395

#### Message

Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]

#### Explanation

This fault occurs when the fan speed reading from the fan controller does not match the desired fan speed and is outside of the normal operating range. This can indicate a problem with a fan or with the reading from the fan controller.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Monitor the fan status.
  - Step 2** If the problem persists for a long period of time or if other fans do not show the same problem, reseal the fan.
  - Step 3** Replace the fan module.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## Fibre Channel-Related Faults

This section contains the following faults raised as a result of issues with the Fibre Channel configuration for a vHBA.

### fltVnicFcConfig-failed

**Fault Code:**F0170

### Message

FC vHBA [name], service profile [name] failed to apply configuration

### Explanation

This fault typically occurs when Cisco UCS Manager could not place the vHBA on the vCon.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the server was successfully discovered.
  - Step 2** Verify that the correct type of adapters are installed on the server.
  - Step 3** Confirm that the vCon assignment is correct.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

```

## Firmware-Related Faults

This section contains faults raised as a result of issues related to a firmware upgrade or to running firmware on a component in the Cisco UCS instance.

### fltEquipmentIOCardAutoUpgradingFirmware

**Fault Code:**F0435

#### Message

IOM [chassisId]/[id] ([switchId]) is auto upgrading firmware

#### Explanation

This fault typically occurs when an I/O module is auto upgrading. Auto-upgrade occurs when the firmware version on the IOM is incompatible with the firmware version on the fabric interconnect.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the IOM and fabric interconnects are not running the same firmware version, wait for the auto-upgrade to complete.
  - Step 2** When the IOM upgrade is completed, verify that Cisco UCS Manager has cleared this fault.
  - Step 3** If you see this fault after the IOM overall status changes to operable, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

```

Severity: major
Cause: auto-firmware-upgrade
CallHome: none
mibFaultCode: 435
mibFaultName: fltEquipmentIOCardAutoUpgradingFirmware
moClass: equipment:IOCard
Type: connectivity

```

### fltEquipmentIOCardFirmwareUpgrade

**Fault Code:**F0398

#### Message

Chassis controller in IOM [chassisId]/[id] ([switchId]) firmware upgrade problem: [upgradeStatus]

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault typically occurs when an IOM upgrade fails.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** On the FSM tab for the IOM, verify whether FSM for the upgrade completed successfully or failed.
  - Step 2** If the FSM failed, review the error message in the FSM.
  - Step 3** If the error message is self explanatory, verify the physical connectivity. For example, an error message could be No Connection to Endpoint or Link Down.
  - Step 4** If the above action did not resolve the issue and the fault persists, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```

mibFaultCode: 398
mibFaultName: fltEquipmentIOCardFirmwareUpgrade
moClass: equipment:IOCard
Type: equipment
```

## fltFirmwareBootUnitActivateStatusFailed

**Fault Code:**F0856

### Message

Activation failed and Activate Status set to failed.

### Explanation

This fault typically occurs for the following reasons: when firmware activation fails, or if the after activation running image is not the corresponding startup image.

- Firmware activation failed.
- The version of firmware running on the server after activation is not the version listed in Cisco UCS Manager as the startup image.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Go to FSM tab for the endpoint on which the fault is raised and review the error description for the reason that the activation failed.
  - Step 2** If the FSM failed, review the error message in the FSM.
  - Step 3** If possible, correct the problem described in the error message.
  - Step 4** If the problem persists, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** warning

**moClass:** firmware:BootUnit  
**Type:** management

## fltFirmwareBootUnitCantBoot

**Fault Code:**F0471

#### Message

unable to boot the startup image. End point booted with backup image

#### Explanation

This fault typically occurs when the startup firmware image on an endpoint is corrupted or invalid, and the endpoint cannot boot from that image.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable. The error message usually includes an explanation for why the endpoint could not boot from the startup image, such as Bad-Image or Checksum Failed.
  - Step 2** If the firmware image is bad or corrupted, download another copy from the Cisco website and update the startup version on the endpoint with the new image.
  - Step 3** If the fault persists, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major

## fltFirmwarePackItemImageMissing

**Fault Code:**F0436

#### Message

[type] image with vendor [hwVendor], model [hwModel] and version [version] is deleted

#### Explanation

This fault typically occurs when the image to which a firmware package item refers is missing.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In Cisco UCS Manager GUI, navigate to the Firmware Management Images tab and determine whether the missing image is available or not.
  - Step 2** If the image is present, click on it to verify the model and vendor.
  - Step 3** If the image for the required model and vendor is not present, download that image or bundle from the Cisco.com website.
  - Step 4** If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major

## fltFirmwareUpdatableImageUnusable

### Fault Code:F0470

### Message

backup image is unusable. reason: [operStateQual]

### Explanation

This fault typically occurs when the backup firmware image on an endpoint is unusable.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable.
  - Step 2** If the firmware image is bad or corrupted, download another copy from the Cisco website and update the backup version on the endpoint with the new image.
  - Step 3** If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## I/O Module-Related Faults

This section contains faults raised as a result of issues related to an I/O module in the Cisco UCS instance.

### fltEquipmentIOCardIdentity

**Fault Code:**F0405

**Message**

[side] IOM [chassisId]/[id] ([switchId]) has a malformed FRU

**Explanation**

This fault typically occurs when the FRU information for an I/O module is corrupted or malformed.

**Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

**Fault Details**

```
Severity: critical
Cause: fru-problem
CallHome: diagnostic
mibFaultCode: 405
mibFaultName: fltEquipmentIOCardIdentity
moClass: equipment:IOCard
Type: equipment
```

### fltEquipmentIOCardInaccessible

**Fault Code:**F0478

**Message**

[side] IOM [chassisId]/[id] ([switchId]) is inaccessible

**Explanation**

This fault typically occurs because an I/O module has lost its connection to the fabric interconnects. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

**Recommended Action**

If you see this fault, take the following actions:

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

- 
- Step 1** Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** critical  
**Cause:** equipment-inaccessible  
**CallHome:** diagnostic  
**mibFaultCode:** 478  
**mibFaultName:**fltEquipmentIOCardInaccessible  
**moClass:** equipment:IOCard  
**Type:** equipment

## fltEquipmentIOCardPeerDisconnected

**Fault Code:**F0403

#### Message

IOM [chassisId]/[id] ([switchId]) peer connectivity: [peerCommStatus]

#### Explanation

This fault typically occurs when an I/O module is unable to communicate with its peer I/O module.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
- Step 2** If the fault does not clear after a few minutes, remove and reinsert the I/O module.
- Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** equipment-disconnected  
**CallHome:** none  
**mibFaultCode:** 403  
**mibFaultName:**fltEquipmentIOCardPeerDisconnected  
**moClass:** equipment:IOCard  
**Type:** connectivity

## fltEquipmentIOCardPost-failure

**Fault Code:**F0481

#### Message

[side] IOM [chassisId]/[id] ([switchId]) POST failure

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault typically occurs when an I/O module encounters errors during the Power On Self Test (POST). The impact of this fault varies according to the errors that were encountered during POST.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the POST results for the I/O module. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the I/O module. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the I/O module.
  - Step 2** Reboot the I/O module.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```

## fltEquipmentIOCardRemoved

**Fault Code:**F0376

### Message

[side] IOM [chassisId]/[id] ([switchId]) is removed

### Explanation

This fault typically occurs because an I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Reinsert the I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
  - Step 2** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## fltEquipmentIOCardThermalProblem

**Fault Code:**F0379

### Message

[side] IOM [chassisId]/[id] ([switchId]) operState: [operState]

### Explanation

This fault occurs when there is a thermal problem on an I/O module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the I/O module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the I/O modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace faulty I/O modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## fltEquipmentIOCardThermalThresholdCritical

**Fault Code:**F0730

### Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

### Explanation

This fault occurs when the temperature of an I/O module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the I/O module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis and I/O module are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace the faulty I/O modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.

## fltEquipmentIOCardThermalThresholdNonCritical

**Fault Code:**F0729

### Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

### Explanation

This fault occurs when the temperature of an I/O module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the I/O module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis and I/O module are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.

## fltEquipmentIOCardThermalThresholdNonRecoverable

**Fault Code:**F0731

### Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

### Explanation

This fault occurs when the temperature of an I/O module has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

### Recommended Action

If you see this fault, take the following actions:

## fltEquipmentIOCardUnacknowledged

**Fault Code:**F0402

### Message

IOM [chassisId]/[id] ([switchId]) connectivity configuration: [configState]

### Explanation

This fault typically occurs when an I/O module is unacknowledged.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the state of the I/O module links.
  - Step 2** Reacknowledge the chassis.
  - Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** warning  
**Cause:** equipment-unacknowledged  
**CallHome:** none  
**mibFaultCode:** 402  
**mibFaultName:** fltEquipmentIOCardUnacknowledged

## fltEquipmentIOCardUnsupportedConnectivity

**Fault Code:**F0401

### Message

IOM [chassisId]/[id] ([switchId]) current connectivity does not match discovery policy: [configState]

### Explanation

This fault typically occurs when the current connectivity for an I/O module does not match the configuration in the chassis discovery policy.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the correct number of links are configured in the chassis discovery policy.
  - Step 2** Check the state of the I/O module links.
  - Step 3** Reacknowledge the chassis.
  - Step 4** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## License-Related Faults

This section contains faults raised as a result of issues related to licensing.

### fltLicenseFileBadLicenseFile

**Fault Code:**F0677

#### Message

license file [name] on fabric-interconnect [scope] can not be installed

#### Explanation

The installation of a license file on the fabric interconnect failed. This fault typically occurs if the license file is badly formatted or its host ID does not match that of the fabric interconnect.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In the Cisco UCS Manager CLI, check the host IDs for both fabric interconnects. You can access the host ID information by entering the **show server-host-id detail** command under the license scope.
  - Step 2** Match the host IDs with the contents of the license file. If the host ID matches that of one of the fabric interconnects, create a **show tech-support** file and contact Cisco TAC. If it does not match, contact Cisco TAC to obtain the correct license File.
- 

#### Fault Details

**Severity:** critical  
**Cause:** license-file-uninstallable  
**CallHome:** none  
**mibFaultCode:** 677  
**mibFaultName:** fltLicenseFileBadLicenseFile  
**moClass:** license:File  
**Type:** management

### fltLicenseFileFileNotDeleted

**Fault Code:**F0678

#### Message

license file [name] from fabric-interconnect [scope] could not be deleted

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

The deletion of a license file on the fabric interconnect has failed. This fault typically occurs if license framework is not able to delete a file.

### Recommended Action

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

---

### Fault Details

**Severity:** critical  
**Cause:** license-file-not-deleted  
**CallHome:** none  
**mibFaultCode:** 678  
**mibFaultName:** fltLicenseFileFileNotDeleted

## fltLicenseInstanceGracePeriodWarning1

**Fault Code:**F0670

### Message

license for [feature] on fabric-interconnect [scope] has entered into the grace period.

### Explanation

At least one port on the fabric interconnect is running in the grace period. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to a port.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the number of licenses installed and being used on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** warning  
**Cause:** license-graceperiod-entered  
**CallHome:** none

## fltLicenseInstanceGracePeriodWarning2

**Fault Code:**F0671

### Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 10 days

### Explanation

At least one port on the fabric interconnect has been running in the grace period for more than 10 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 10 days.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

**Type:** management

## fltLicenseInstanceGracePeriodWarning7

**Fault Code:**F0676

### Message

Grace period for [feature] on fabric-interconnect [scope] is expired. Please acquire a license for the same.

### Explanation

At least one port on the fabric interconnect has been running in the grace period for more than 120 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 120 days. At this stage, the system licensing state is set to expired.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
- Step 2** Disable the unlicensed ports to bring the number of enabled ports down to the number of total licenses.
- Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC immediately to procure more licenses.
- 

### Fault Details

## Link-Related Faults

This section contains faults raised as a result of issues related to the links between a chassis or I/O module and a fabric interconnect.

### fltEtherSwitchIntFloSatellite-connection-absent

**Fault Code:**F0367

#### Message

No link between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

#### Explanation

This fault is raised when an I/O module fabric port, which links the I/O module port and the fabric interconnect, is not functional

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
  - Step 2** Ensure that the fabric interconnect server port is configured and enabled.
  - Step 3** Ensure that the links are plugged in properly and reacknowledge the chassis.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

# Memory-Related Faults

This section contains faults raised as issues with memory units or DIMMs in a server.

## fltMemoryArrayVoltageThresholdCritical

**Fault Code:**F0190

### Message

Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id]  
voltage: [voltage]

### Explanation

This fault occurs when the memory array voltage exceeds the specified hardware voltage rating

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.
  - Step 2** Monitor the memory array for further degradation.
  - Step 3** If the fault occurs on a blade server memory array, remove the blade and re-insert into the chassis.
  - Step 4** In Cisco UCS Manager, decommission and recommission the server.
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** voltage-problem  
**CallHome:** environmental  
**mibFaultCode:** 190  
**mibFaultName:** fltMemoryArrayVoltageThresholdCritical  
**moClass:** memory:Array  
**Type:** environmental

## fltMemoryArrayVoltageThresholdNonCritical

**Fault Code:**F0189

### Message

Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id]  
voltage: [voltage]

### Explanation

This fault occurs when the memory array voltage is out of normal operating range, but hasn't yet reached a critical stage. Typically the memory array recovers itself from this situation.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.
  - Step 2** Monitor the memory array for further degradation.
  - Step 3** If the fault occurs on a blade server memory array, remove the blade and re-insert into the chassis.
  - Step 4** In Cisco UCS Manager, decommission and recommission the server.
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

```

## fltMemoryBufferUnitThermalThresholdCritical

**Fault Code:**F0536

### Message

Buffer Unit [id] on server [chassisId]/[slotId] temperature: [thermal]Buffer Unit [id] on server [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a memory buffer unit on a blade or rack server exceeds a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the server.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 8** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltMemoryBufferUnitThermalThresholdNonCritical

**Fault Code:**F0535

### Message

Buffer Unit [id] on server [chassisId]/[slotId] temperature: [thermal]Buffer Unit [id] on server [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a memory buffer unit on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the server.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 8** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## fltMemoryUnitDegraded

**Fault Code:**F0184

### Message

DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]

### Explanation

This fault occurs when a DIMM is in a degraded operability state. This state typically occurs when an excessive number of correctable ECC errors are reported on the DIMM by the server BIOS.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Monitor the error statistics on the degraded DIMM through Cisco UCS Manager. If the high number of errors persists, there is a high possibility of the DIMM becoming inoperable.
  - Step 2** If the DIMM becomes inoperable, replace the DIMM.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```

Cause: equipment-degraded
CallHome: none
mibFaultCode: 184
mibFaultName: fltMemoryUnitDegraded
moClass: memory:Unit
Type: equipment
```

## fltMemoryUnitDisabled

**Fault Code:**F0844

### Message

DIMM [location] on server [chassisId]/[slotId] operState: [operState]DIMM [location] on server [id] operState: [operState]

### Explanation

This fault is raised when the server BIOS disables a DIMM. The BIOS could disable a DIMM for several reasons, including incorrect location of the DIMM or incompatible speed.

### Recommended Action

If you see this fault, refer to the Cisco UCS B-Series Troubleshooting Guide for information on how to resolve the DIMM issues.

**mibFaultName:** fltMemoryUnitDisabled  
**moClass:** memory:Unit  
**Type:** equipment

## fltMemoryUnitIdentity-unestablishable

**Fault Code:**F0502

#### Message

DIMM [location] on server [chassisId]/[slotId] has an invalid FRUDIMM [location] on server [id] has an invalid FRU

#### Explanation

This fault typically occurs because Cisco UCS Manager has detected unsupported DIMM in the server. For example, the model, vendor, or revision is not recognized.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
- Step 2** If the above action did not resolve the issue, you may have unsupported DIMMs or DIMM configuration in the server. Create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** identity-unestablishable

## fltMemoryUnitInoperable

**Fault Code:**F0185

#### Message

DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]

#### Explanation

This fault typically occurs because an above threshold number of correctable or uncorrectable errors has occurred on a DIMM. The DIMM may be inoperable.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the SEL is enabled, review the SEL statistics on the DIMM to determine which threshold was crossed.
- Step 2** If necessary, replace the DIMM.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltVnicEtherPinningMisconfig

**Fault Code:**F0841

### Message

Hard pinning target for eth vNIC [name], service profile [name] is missing or misconfigured

### Explanation

This fault occurs when one or more vNIC target uplink ports or port channels for a hard-pinned LAN pin group are either missing or misconfigured as the wrong port type.

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Review the LAN pin group configuration.
  - Step 2** Correct the configuration of the port and port channels in the pin group.
  - Step 3** Ensure that all required vLANs are allowed on the target ports or port channels.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

Type: configuration
```

## fltVnicEtherPinningMismatch

**Fault Code:**F0840

### Message

Hard pinning target for eth vNIC [name], service profile [name] does not have all the required vlans configured

### Explanation

This fault occurs when one or more VLANs required by vNIC in a service profile are not configured on the target uplink port or port channel for a hard-pinned LAN pin group.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In the LAN Uplinks Manager of the Cisco UCS Manager GUI, configure all of the VLANs in the vNIC in the target uplink port or port channel for the LAN pin group. If you prefer to use the Cisco UCS Manager CLI, navigate to scope **/eth-uplink/vlan** and create the required member ports for the LAN pin group.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```

## Port-Related Faults

This section contains faults raised as a result of issues with one or more ports in a Cisco UCS instance.

### fltFabricEpMgrEpTransModeFail

**Fault Code:**F0832

#### Message

Port constraint violation on switch [id]: [confQual]

#### Explanation

This fault occurs when at least one logical interface is misconfigured. This can happen when upgrading to a different type or series of fabric interconnect or when importing a configuration. The configuration must meet the following constraints:

- The first Fibre Channel port must be an odd port number. This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
- All FC ports must be configured contiguously with intervening unconfigured FC ports. This can happen during an upgrade from a Cisco UCS 6100 series fabric interconnect when you import the configuration from a Cisco UCS 6100 series fabric interconnect configuration into a Cisco UCS 6200 series fabric interconnect. For example, the Cisco UCS 6100 series fabric interconnect has an FC expansion module with ports FC2/1 through FC2/6 configured. When you import that configuration into a Cisco UCS 6200 series fabric interconnect, FC ports 2/7 through 2/16 remain unconfigured. You can correct this problem by configuring the missing FC ports.
- Ethernet and FC port ranges cannot overlap. This can happen when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect. For example, some Cisco UCS 6100 expansion modules have FC and Ethernet ports with the same ID, such as FC port 2/1 and Ethernet port 2/1.
- There must be at most one logical port per fabric interconnect ID/module ID/port ID. For example, a port cannot be configured as both Ethernet and FC. This can happen during an upgrade from a Cisco UCS 6100 series fabric interconnect. For example, some Cisco UCS 6100 expansion modules have FC and Ethernet ports with the same ID, such as FC port 2/1 and Ethernet port 2/1.
- Within a module, the port IDs of Ethernet ports must be lower than the smallest FC port ID. This means that all Ethernet ports must be on the left and all FC ports on the right. This can happen during an upgrade from a Cisco UCS 6140 fabric interconnect with 40 ports on the fixed module to a Cisco UCS 6248 fabric interconnect with 32 ports on the fixed module. For example, if the Cisco UCS 6248 is initially configured with Ethernet ports 1/1 through 1/16 and FC ports 1/17 through 1/32, and you import a configuration from the Cisco UCS 6140 with Ethernet ports 1/1 through 1/32

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

unconfigured and Ethernet ports 1/33 through 1/40, the resulting configuration is Ethernet 1/1 through 1/16, FC 1/17 through 1/32, and Ethernet 1/33 through 1/40. This is not a valid configuration. You must delete ports 1/33 through 1/40 to correct the configuration.

- A non-unified Ethernet port cannot be configured as an FC port. Please note the following:
  - This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
  - This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.
  - This constraint can be violated when pre-provisioning a port on a Cisco UCS 6100 series fabric interconnect and then inserting an expansion module that does not match the requirement.
- A non-unified FC port cannot be configured as an Ethernet port. Please note the following:
  - This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
  - This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.
  - This constraint can be violated when pre-provisioning a port on a Cisco UCS 6100 series fabric interconnect and then inserting an expansion module that does not match the requirement.
- On a Cisco UCS 6100 series fabric interconnect, server ports cannot be configured on expansion modules. This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.

### Recommended Action

If you see this fault, take the following action:

- 
- |               |   |
|---------------|---|
| <b>Step 1</b> | Create a list of all logical interfaces that are misconfigured and have caused an 'error-misconfigured' fault.                          |
| <b>Step 2</b> | For each logical interface, note the reason listed in the fault for the misconfiguration.   |
| <b>Step 3</b> | Log into Cisco UCS Manager and correct each misconfigured logical interface. If you used the Cisco UCS Manager CLI, commit all changes. |
| <b>Step 4</b> | Review any faults or error messages that describe additional misconfigurations and correct those errors.                                |
| <b>Step 5</b> | If the above actions did not resolve the issue, create a <b>show tech-support</b> file and contact Cisco TAC.                           |

## fltFabricPloEpErrorMisconfigured

**Fault Code:**F0834

### Message

Interface [name] is [operState]. Reason: [operStateReason]

### Explanation

This fault occurs when a logical interface is misconfigured. This can happen when upgrading to a different type or series of fabric interconnect or when importing a configuration.

### Recommended Action

If you see this fault, take the following action:

- 
- Step 1** Create a list of all logical interfaces that are misconfigured and have caused an 'error-misconfigured' fault.
  - Step 2** For each logical interface, note the reason listed in the fault for the misconfiguration.
  - Step 3** Log into Cisco UCS Manager and correct each misconfigured logical interface. If you used the Cisco UCS Manager CLI, commit all changes.
  - Step 4** Review any faults or error messages that describe additional misconfigurations and correct those errors.
  - Step 5** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: critical
Cause: interface-misconfigured
CallHome: none
mibFaultCode: 834
mibFaultName: fltFabricPloEpErrorMisconfigured
moClass: fabric:PloEp
Type: network
```

## fltPortPloFailed

**Fault Code:**F0277

### Message

[transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

### Explanation

This fault is raised on fabric interconnect ports and on server-facing ports on an IOM or a FEX module when the system detects an indeterminate fault.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Recommended Action

If you see this fault, create a **show tech-support** file for Cisco UCS Manager and the chassis or FEX module, and then contact Cisco TAC.

---

#### Fault Details

```
Severity: major
Cause: port-failed
CallHome: diagnostic
mibFaultCode: 277
mibFaultName: fltPortPIoFailed
moClass: port:PIo
Type: network
```

### fltPortPIoHardware-failure

**Fault Code:F0278**

#### Message

[transport] port [portId] on chassis [id] oper state: [operState], reason: hardware-failure[transport] port [portId] on fabric interconnect [id] oper state: [operState], reason: hardware-failure

#### Explanation

This fault is raised on fabric interconnect ports and server-facing ports on an IOM or a FEX module when the system detects a hardware failure.

#### Recommended Action

If you see this fault, create a **show tech-support** file for Cisco UCS Manager and the chassis or FEX module, and then contact Cisco TAC.

---

#### Fault Details

```
Severity: major
Cause: port-failed
CallHome: diagnostic
mibFaultCode: 278
mibFaultName: fltPortPIoHardwareFailure
moClass: port:PIo
Type: network
```

### fltPortPIoInvalid-sfp

**Fault Code:F0713**

#### Message

[transport] port [portId] on chassis [id] role : [ifRole] transceiver type:[xcvrType][transport] port [portId] on fabric interconnect [id] role : [ifRole] transceiver type:[xcvrType]

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault is raised against a fabric interconnect port, network-facing IOM port, or FEX module port if an unsupported transceiver type is inserted. The port cannot be used if it has an unsupported transceiver.

### Recommended Action

If you see this fault, replace the transceiver with a supported SFP type. Refer to the documentation on the Cisco website for a list of supported SFPs.

---

### Fault Details

**Severity:** major  
**Cause:** unsupported-transceiver  
**CallHome:** none  
**mibFaultCode:** 713  
**mibFaultName:** fltPortPIoInvalidSfp  
**moClass:** port:PIo  
**Type:** network

## fltPortPIoLink-down

### Fault Code:F0276

### Message

[transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

### Explanation

This fault occurs when a fabric interconnect port is in link-down state. This state impacts the traffic destined for the port.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the physical link is properly connected between the fabric interconnect and the peer component.
  - Step 2** Verify that the configuration on the peer entity is properly configured and matches the fabric interconnect port configuration.
  - Step 3** Unconfigure and re-configure the port.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** link-down  
**CallHome:** diagnostic  
**mibFaultCode:** 276  
**mibFaultName:** fltPortPIoLinkDown  
**moClass:** port:PIo  
**Type:** network

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fltPortPloSfp-not-present

**Fault Code:**F0279

### Message

[transport] port [portId] on chassis [id] oper state: [operState][transport] port [portId] on fabric interconnect [id] oper state: [operState]

### Explanation

When a fabric interconnect port is not in an unconfigured state, an SFP is required for its operation. This fault is raised to indicate that the SFP is missing from a configured port.

### Recommended Action

If you see this fault, insert a supported SFP into the port on the fabric interconnect. A list of supported SFPs can be found on [www.Cisco.com](http://www.Cisco.com).

### Fault Details

**Severity:** info  
**Cause:** port-failed  
**CallHome:** none  
**mibFaultCode:** 279  
**mibFaultName:** fltPortPIoSfpNotPresent  
**moClass:** port:PIo  
**Type:** network

## Port Channel-Related Faults

This section contains faults raised as a result of issues with one or more port channels in a Cisco UCS instance.

## fltFabricDceSwSrvPcEpDown

**Fault Code:**F0831

### Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

### Explanation

This fault typically occurs when a member port in a fabric port channel is down.

### Recommended Action

If you see this fault, take the following action:

- Step 1** Check the link connectivity between the FEX or IOM and the fabric interconnect.

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

**Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

---

### Fault Details

**Severity:** major  
**Cause:** membership-down  
**CallHome:** none  
**mibFaultCode:** 831  
**mibFaultName:** fltFabricDceSwSrvPcEpDown  
**moClass:** fabric:DceSwSrvPcEp  
**Type:** network

## fltFabricFcSanPcEpIncompatibleSpeed

**Fault Code:**F0734

### Message

Member [slotId]/[portId] cannot be added to SAN Port-Channel [portId] on fabric interconnect [id], reason: [membership]

### Explanation

This fault typically occurs when the maximum supported Fibre Channel speed of a port in a Fibre Channel port channel is incompatible with the admin speed configured for the port channel.

### Recommended Action

If you see this fault, take one of the following actions:

- Change the admin speed of the port channel to match the maximum supported speed of the member ports in the port channel.
  - Replace the expansion module in the fabric interconnect with one that matches the admin speed configured for the port channel.
- 

### Fault Details

**Severity:** major  
**Cause:** incompatible-speed  
**CallHome:** none  
**mibFaultCode:** 734  
**mibFaultName:** fltFabricFcSanPcEpIncompatibleSpeed  
**moClass:** fabric:FcSanPcEp  
**Type:** network

## fltFabricFcSanPcIncompatibleSpeed

**Fault Code:**F0735

### Message

Cannot set admin speed to the requested value, Speed incompatible with member ports in the port-channel

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault typically occurs when the maximum supported Fibre Channel speed of a port in a Fibre Channel port channel is incompatible with the admin speed configured for the port channel.

### Recommended Action

If you see this fault, take one of the following actions:

- Change the admin speed of the port channel to match the maximum supported speed of the member ports in the port channel.
- Replace the expansion module in the fabric interconnect with one that matches the admin speed configured for the port channel.

### Fault Details

```
Severity: major
Cause: incompatible-speed
CallHome: none
mibFaultCode: 735
mibFaultName: fltFabricFcSanPcIncompatibleSpeed
moClass: fabric:FcSanPc
Type: network
```

## fltFabricExternalPcDown

### Fault Code:F0282

### Message

[type] port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][type]  
port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

### Explanation

This fault typically occurs when a fabric interconnect reports that a fabric port channel is operationally down.

### Recommended Action

If you see this fault, take the following actions:

- Step 1** Verify that the member ports in the fabric port channel are administratively up and operational. Check the link connectivity for each port.
- Step 2** If connectivity seems correct, check the operational states on the peer switch ports of the port channel members.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

### Fault Details

```
Severity: major
Cause: operational-state-down
CallHome: none
mibFaultCode: 282
mibFaultName: fltFabricExternalPcDown
```

**moClass:** fabric:ExternalPc  
**Type:** network

## fltFabricFcSanPcEpDown

**Fault Code:**F0728

### Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

### Explanation

This fault typically occurs when a member port in a Fibre Channel port channel is down.

### Recommended Action

If you see this fault, take the following action:

- 
- Step 1** Check the link connectivity on the upstream Fibre Channel switch
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** membership-down  
**CallHome:** none  
**mibFaultCode:** 728  
**mibFaultName:** fltFabricFcSanPcEpDown  
**moClass:** fabric:FcSanPcEp  
**Type:** network

## Power-Related Faults

This section contains faults raised as a result of issues related to the power configuration in the Cisco UCS instance.

## fltPowerBudgetChassisPsuInsufficient

**Fault Code:**F0764

### Message

Chassis [id] has had PSU failures. Please correct the problem by checking input power or replace the PSU

### Explanation

This fault typically occurs when at least two PSUs are not powered on.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Recommended Action

If you see this fault, insert at least two PSUs and power them on.

---

#### Fault Details

**Severity:** major  
**Cause:** psu-failure  
**CallHome:** none  
**mibFaultCode:** 764  
**mibFaultName:** fltPowerBudgetChassisPsuInsufficient

**Type:** environmental

## fltPowerBudgetFirmwareMismatch

**Fault Code:**F0798

#### Message

Firmware on blade [chassisId]/[slotId] does not allow chassis level power capping. Please consider upgrading to at least 1.4 version

#### Explanation

This fault typically occurs when the CIMC or BIOS firmware on a server is an earlier release than Cisco UCS, Release 1.4.

#### Recommended Action

If you see this fault, consider upgrading the CIMC firmware, and the entire Cisco UCS instance if necessary, to Cisco UCS, Release 1.4 or later.

---

#### Fault Details

**Severity:** major  
**Cause:** old-firmware  
**CallHome:** none  
**mibFaultCode:** 798  
**mibFaultName:** fltPowerBudgetFirmwareMismatch  
**moClass:** power:Budget  
**Type:** environmental

## fltPowerBudgetPowerBudgetBmcProblem

**Fault Code:**F0637

#### Message

Power cap application failed for server [chassisId]/[slotId]Power cap application failed for server [id]

#### Explanation

This fault typically occurs when the server CIMC or BIOS has failed to enforce the configured power cap.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the power consumption of the blade server. If the server is consuming significantly more power than configured in the power cap, switch to a manual per blade cap configuration. If the power consumption is still too high, consider reducing the group cap so that the power consumption of other chassis consumption can be reduced to make up for the increase.
  - Step 2** If the power consumption is still too high, the CIMC or BIOS software is likely faulty.
  - Step 3** Create a **show tech-support** file for Cisco UCS Manager and the chassis and then contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: power-cap-fail

## fltPowerBudgetPowerBudgetDiscFail

**Fault Code:**F0640

### Message

Insufficient power available to discover server [chassisId]/[slotId]Insufficient power available to discover server [id]

### Explanation

This fault typically occurs when discovery fails due to unavailable power in the group.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Consider increasing the group cap.
  - Step 2** Reduce the number of blade servers or chassis in the Cisco UCS instance.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** power-cap-fail  
**CallHome:** none

## fltPowerBudgetTStateTransition

**Fault Code:**F0765

### Message

Blade [chassisId]/[slotId] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliantRack server [id] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliant

### Explanation

This fault typically occurs when the processor T-state is used to severely throttle the CPU.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Redeploy the power budget for the affected power group, blade server, or chassis.
  - Step 2** If the problem persists, reboot the blade server.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

## fltPowerChassisMemberPowerGroupCapInsufficient

**Fault Code:**F0740

#### Message

Chassis [id] cannot be capped as group cap is low. Please consider raising the cap.

#### Explanation

This fault typically occurs when an updated group cap is insufficient to meet the minimum hardware requirements and a chassis that has just been added to the power group cannot be capped as a result.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Consider increasing the group cap.
- Step 2** Reduce the number of blade servers or chassis in the Cisco UCS instance.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

## **fltPowerPolicyPowerPolicyApplicationFail**

**Fault Code:**F0766

### **Message**

Insufficient budget to apply no-cap priority through policy [name]. Blades will continue to be capped

### **Explanation**

This fault occurs when a power policy cannot be applied to one or more blade servers. The affected blade servers cannot operate normally without power capping due to the limited power budget for those servers.

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Increase the power budget for the blade servers in the power policy.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

**Severity:** minor  
**Cause:** no-cap-fail

## fltEquipmentPsuInoperable

**Fault Code:F0374**

### Message

Power supply [id] in chassis [id] operability: [operability]Power supply [id] in fabric interconnect [id] operability: [operability]Power supply [id] in fex [id] operability: [operability]Power supply [id] in server [id] operability: [operability]

### Explanation

This fault typically occurs when Cisco UCS Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a FEX. For example, the PSU is not functional.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the power cord is properly connected to the PSU and the power source.
  - Step 2** Verify that the power source is 220 volts.
  - Step 3** Verify that the PSU is properly installed in the chassis or fabric interconnect.
  - Step 4** Remove the PSU and reinstall it.
  - Step 5** Replace the PSU.
  - Step 6** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

### Message

Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]

### Explanation

This fault typically occurs when Cisco UCS Manager detects that a power supply unit in a chassis, fabric interconnect, or FEX is offline.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the power cord is properly connected to the PSU and the power source.
  - Step 2** Verify that the power source is 220 volts.
  - Step 3** Verify that the PSU is properly installed in the chassis or fabric interconnect.
  - Step 4** Remove the PSU and reinstall it.
  - Step 5** Replace the PSU.
  - Step 6** If the above actions did not resolve the issue, note down the type of PSU, execute the **show tech-support** command, and contact Cisco Technical Support.
-

**Explanation**

This fault occurs if the current output of the PSU in a chassis, fabric interconnect, or rack server is far below or above the desired output value.

**Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Monitor the PSU status.
  - Step 2** Plan to replace the PSU as soon as possible.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file for the chassis and Cisco UCS Manager, and contact Cisco TAC.

**Message**

Power supply [id] in chassis [id] output power: [perf]Power supply [id] in fabric interconnect [id] output power: [perf]Power supply [id] in server [id] output power: [perf]

**Explanation**

This fault is raised as a warning if the current output of the PSU in a chassis, fabric interconnect, or rack server does not match the desired output value.

**Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Monitor the PSU status.
  - Step 2** If possible, remove and reseat the PSU.
  - Step 3** If the above action did not resolve the issue, create a **show tech-support** file for the chassis and Cisco UCS Manager, and contact Cisco TAC.

## fltEquipmentPsuPowerSupplyShutdown

**Fault Code:**F0881

#### Message

Power supply [id] in chassis [id] shutdown reason:[powerStateQualifier]

#### Explanation

This fault typically occurs when a power supply unit in a chassis, fabric interconnect, or a FEX is shut down, either due to higher than expected power current, higher than expected temperatures, or the failure of a fan.

#### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Review the product specifications to determine the temperature operating range of the server.
- Step 2** Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
- Step 3** Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
- Step 4** Verify that the site cooling system is operating properly.
- Step 5** Power off unused blade servers and rack servers.
- Step 6** Verify that the power cord is properly connected to the PSU and the power source.
- Step 7** Verify that the power source is 220 volts.
- Step 8** Verify that the PSU is properly installed in the chassis or fabric interconnect.
- Step 9** Remove the PSU and reinstall it.
- Step 10** Replace the PSU.
- Step 11** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

## fltEquipmentPsuThermalThresholdCritical

**Fault Code:**F0383

### Message

Power supply [id] in chassis [id] temperature: [thermal]Power supply [id] in fabric interconnect [id] temperature: [thermal]Power supply [id] in server [id] temperature: [thermal]

### Explanation

This fault occurs when the temperature of a PSU module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

### Recommended Action

If you see this fault, take the following actions:

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

- 
- Step 1** Review the product specifications to determine the temperature operating range of the PSU module.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the PSU modules have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Replace faulty PSU modules.
  - Step 8** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 9** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## Processor-Related Faults

This section contains faults raised as a result of issues with a server processor.

### fltProcessorUnitDisabled

**Fault Code:**F0842

#### Message

Processor [id] on server [chassisId]/[slotId] operState: [operState]Processor [id] on server [id]  
operState: [operState]

#### Explanation

This fault occurs in the unlikely event that a processor is disabled.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If this fault occurs on a blade server, remove and reinsert the server into the chassis.
- Step 2** In Cisco UCS Manager, decommission and recommission the blade server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

## fltProcessorUnitIdentity-unestablishable

**Fault Code:**F0801

### Message

Processor [id] on server [chassisId]/[slotId] has an invalid FRUProcessor [id] on server [id] has an invalid FRU

### Explanation

This fault typically occurs because Cisco UCS Manager has detected an unsupported CPU in the server. For example, the model, vendor, or revision is not recognized.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
- Step 2** If the above action did not resolve the issue, you may have an unsupported CPU configuration in the server. Create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## fltProcessorUnitThermalNonCritical

#### Fault Code:F0175

#### Message

Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]

#### Explanation

This fault occurs when the processor temperature on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Review the product specifications to determine the temperature operating range of the server.
  - Step 2** Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
  - Step 3** Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
  - Step 4** Verify that the site cooling system is operating properly.
  - Step 5** Power off unused blade servers and rack servers.
  - Step 6** Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
  - Step 7** Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
  - Step 8** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

If you see this fault, take the following actions:

- Step 1** If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
- Step 2** In Cisco UCS Manager, decommission and then recommission the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** voltage-problem  
**CallHome:** environmental  
**mibFaultCode:** 180  
**mibFaultName:** fltProcessorUnitVoltageThresholdNonRecoverable

## Server-Related Faults

This section contains faults raised as a result of issues related to a server.

### fltComputeBoardCmosVoltageThresholdCritical

**Fault Code:**F0424

#### Message

Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [id] is [cmosVoltage]

#### Explanation

This fault is raised when the CMOS battery voltage has dropped to lower than the normal operating range. This could impact the clock and other CMOS settings.

#### Recommended Action

If you see this fault, replace the battery.

---

#### Fault Details

**Severity:** minor  
**Cause:** voltage-problem  
**CallHome:** none  
**mibFaultCode:** 424  
**mibFaultName:** fltComputeBoardCmosVoltageThresholdCritical  
**moClass:** compute:Board  
**Type:** environmental

### fltComputeBoardCmosVoltageThresholdNonRecoverable

**Fault Code:**F0425

#### Message

Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [id] is [cmosVoltage]

#### Explanation

This fault is raised when the CMOS battery voltage has dropped quite low and is unlikely to recover. This impacts the clock and other CMOS settings.

#### Recommended Action

If you see this fault, replace the battery.

---

#### Fault Details

**Severity:** major  
**Cause:** voltage-problem  
**CallHome:** none

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

```
mibFaultCode: 425
mibFaultName: fltComputeBoardCmosVoltageThresholdNonRecoverable
moClass: compute:Board
Type: environmental
```

## fltComputeBoardPowerError

**Fault Code:**F0310

### Message

Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [operPower]Motherboard of server [id] (service profile: [assignedToDn]) power: [operPower]

### Explanation

This fault typically occurs when the server power sensors have detected a problem.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Make sure that the server is correctly installed in the chassis and that all cables are secure.
  - Step 2** If you reinstalled the server, reacknowledge it.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: power-problem
CallHome: none
mibFaultCode: 310
mibFaultName: fltComputeBoardPowerError
moClass: compute:Board
Type: environmental
```

## fltComputeBoardPowerFail

**Fault Code:**F0868

### Message

Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [power]Motherboard of server [id] (service profile: [assignedToDn]) power: [power]

### Explanation

This fault typically occurs when the power sensors on a blade server detect a problem.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Remove the blade server from the chassis.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

---

### **Fault Details**

**Severity:** critical  
**Cause:** power-problem  
**CallHome:** diagnostic  
**mibFaultCode:** 868  
**mibFaultName:** fltComputeBoardPowerFail  
**moClass:** compute:Board  
**Type:** environmental

## **fltComputeBoardThermalProblem**

**Fault Code:**F0869

### **Message**

Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) thermal: [thermal]Motherboard of server [id] (service profile: [assignedToDn]) thermal: [thermal]

### **Explanation**

This fault typically occurs when the motherboard thermal sensors on a server detect a problem.

### **Recommended Action**

If you see this fault, take the following actions:

---

- Step 1** Verify that the server fans are working properly.
  - Step 2** Wait for 24 hours to see if the problem resolves itself.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

**Severity:** minor  
**Cause:** thermal-problem  
**CallHome:** environmental  
**mibFaultCode:** 869  
**mibFaultName:** fltComputeBoardThermalProblem  
**moClass:** compute:Board  
**Type:** environmental

## **fltComputeIOHubThermalNonCritical**

**Fault Code:**F0538

### **Message**

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault is raised when the IO controller temperature is outside the upper or lower non-critical threshold.

### Recommended Action

If you see this fault, monitor other environmental events related to this server and ensure the temperature ranges are within recommended ranges.

---

### Fault Details

**Severity:** minor  
**Cause:** thermal-problem  
**CallHome:** environmental  
**mibFaultCode:** 538  
**mibFaultName:** fltComputeIOHubThermalNonCritical  
**moClass:** compute:IOHub  
**Type:** environmental

## **fltComputeIOHubThermalThresholdCritical**

**Fault Code:**F0539

### Message

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

### Explanation

This fault is raised when the IO controller temperature is outside the upper or lower critical threshold.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Monitor other environmental events related to the server and ensure the temperature ranges are within recommended ranges.
  - Step 2** Consider turning off the server for a while if possible.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** thermal-problem  
**CallHome:** environmental  
**mibFaultCode:** 539  
**mibFaultName:** fltComputeIOHubThermalThresholdCritical  
**moClass:** compute:IOHub  
**Type:** environmental

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fltComputeIOHubThermalThresholdNonRecoverable

**Fault Code:**F0540

### Message

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

### Explanation

This fault is raised when the IO controller temperature is outside the recoverable range of operation.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Shut down the server immediately.
  - Step 2** Create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: critical
Cause: thermal-problem
CallHome: environmental
mibFaultCode: 540
mibFaultName: fltComputeIOHubThermalThresholdNonRecoverable
moClass: compute:IOHub
Type: environmental
```

## fltComputePhysicalAssignedInaccessible

**Fault Code:**F0322

### Message

Server [id] (service profile: [assignedToDn]) inaccessibleServer [chassisId]/[slotId] (service profile: [assignedToDn]) inaccessible

### Explanation

This fault typically occurs when the server, which is associated with a service profile, has lost connection to the fabric interconnects. This fault occurs if there are communication issues between the server CIMC and the fabric interconnects.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
  - Step 2** If the fault does not clear after a brief time, remove the server and then reinsert it.
  - Step 3** Reacknowledge the server.

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** minor  
**Cause:** equipment-inaccessible  
**CallHome:** diagnostic  
**mibFaultCode:** 322  
**mibFaultName:** fltComputePhysicalAssignedInaccessible  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalAssignedMissing

**Fault Code:**F0319

### Message

Server [id] (service profile: [assignedToDn]) missingServer [chassisId]/[slotId] (service profile: [assignedToDn]) missing

### Explanation

This fault typically occurs when the server, which is associated with a service profile, was previously physically inserted in the slot, but cannot be detected by Cisco UCS Manager.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the server is physically present in the slot, remove and then reinsert it.
- Step 2** If the server is not physically present in the slot, reinsert it.
- Step 3** Reacknowledge the server.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-missing  
**CallHome:** none  
**mibFaultCode:** 319  
**mibFaultName:** fltComputePhysicalAssignedMissing  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalAssociationFailed

**Fault Code:**F0315

### Message

Service profile [assignedToDn] failed to associate with server [id]Service profile [assignedToDn] failed to associate with server [chassisId]/[slotId]

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault typically occurs for one of the following reasons:

- The service profile could not be associated with the server.
- The server is down.
- The data path is not working.
- Cisco UCS Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the FSM tab and the current state of the server and any FSM operations.
- Step 2** If the server is stuck in an inappropriate state, such as booting, power cycle the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: critical
Cause: association-failed
CallHome: none
mibFaultCode: 315
mibFaultName: fltComputePhysicalAssociationFailed
moClass: compute:Physical
Type: configuration
```

## fltComputePhysicalBiosPostTimeout

**Fault Code:**F0313

### Message

Server [id] (service profile: [assignedToDn]) BIOS failed power-on self testServer [chassisId]/[slotId] (service profile: [assignedToDn]) BIOS failed power-on self test

### Explanation

This fault typically occurs when the server has encountered a diagnostic failure.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the server.
- Step 2** Reacknowledge the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** critical  
**Cause:** equipment-inoperable  
**CallHome:** diagnostic  
**mibFaultCode:** 313  
**mibFaultName:** fltComputePhysicalBiosPostTimeout  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalDiscoveryFailed

#### Fault Code:F0314

#### Message

Server [id] (service profile: [assignedToDn]) discovery: [discovery]Server [chassisId]/[slotId] (service profile: [assignedToDn]) discovery: [discovery]

#### Explanation

This fault typically occurs for one of the following reasons:

- The shallow discovery that occurs when the server associated with service profile failed.
- The server is down.
- The data path is not working.
- Cisco UCS Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the FSM tab and the current state of the server and any FSM operations.
- Step 2** Check the error descriptions and see if any server components indicate a failure.
- Step 3** If the server or a server component has failed, do the following:
- a. Check the operational state of the server.
  - b. If the server is not operable, re-acknowledge the server.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major  
**Cause:** discovery-failed  
**CallHome:** diagnostic  
**mibFaultCode:** 314  
**mibFaultName:** fltComputePhysicalDiscoveryFailed  
**moClass:** compute:Physical  
**Type:** operational

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fltComputePhysicalIdentityUnestablishable

**Fault Code:**F0306

### Message

Server [id] (service profile: [assignedToDn]) has an invalid FRUServer [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU

### Explanation

This fault typically occurs because Cisco UCS Manager has detected an unsupported server or CPU.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that a supported server and/or CPU is installed.
  - Step 2** Verify that the Cisco UCS Manager capability catalog is up to date.
  - Step 3** Reacknowledge the server.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** minor  
**Cause:** identity-unestablishable  
**CallHome:** diagnostic  
**mibFaultCode:** 306  
**mibFaultName:** fltComputePhysicalIdentityUnestablishable  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalInoperable

**Fault Code:**F0317

### Message

Server [id] (service profile: [assignedToDn]) health: [operability]Server [chassisId]/[slotId] (service profile: [assignedToDn]) health: [operability]

### Explanation

This fault typically occurs when the server has encountered a diagnostic failure.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the server.
  - Step 2** Reacknowledge the server.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-inoperable  
**CallHome:** diagnostic  
**mibFaultCode:** 317  
**mibFaultName:** fltComputePhysicalInoperable  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalInsufficientlyEquipped

**Fault Code:**F0305

### Message

Server [id] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adaptersServer [chassisId]/[slotId] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adapters

### Explanation

This fault typically occurs because Cisco UCS Manager has detected that the server has an insufficient number of DIMMs, CPUs, and/or adapters.

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** Verify that the DIMMs are installed in a supported configuration.
- Step 2** Verify that an adapter and CPU are installed.
- Step 3** Reacknowledge the server.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** minor  
**Cause:** insufficiently-equipped  
**CallHome:** none  
**mibFaultCode:** 305  
**mibFaultName:** fltComputePhysicalInsufficientlyEquipped  
**moClass:** compute:Physical  
**Type:** equipment

## fltComputePhysicalPost-failure

**Fault Code:**F0517

### Message

Server [id] POST or diagnostic failureServer [chassisId]/[slotId] POST or diagnostic failure

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### **Explanation**

This fault typically occurs when the server has encountered a diagnostic failure or an error during POST.

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the `show post` command under the scope for the server.
  - Step 2** Reboot the server.
  - Step 3** If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.
-

## fltMgmtIfMisConnect

**Fault Code:**F0688

### Message

Management Port [id] in server [id] is mis connected

### Explanation

This fault occurs when the server and FEX connectivity changes.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the connectivity between the server and FEX.
  - Step 2** If the connectivity was changed by mistake, restore it to its previous configuration.
  - Step 3** If the connectivity change was intentional, reacknowledge the server.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: warning
Cause: link-misconnected
CallHome: none
mibFaultCode: 688
mibFaultName: fltMgmtIfMisConnect
moClass: mgmt:If

## fltStorageLocalDiskInoperable

**Fault Code:**F0181

### Message

Local disk [id] on server [chassisId]/[slotId] operability: [operability]Local disk [id] on server [id] operability: [operability]

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault occurs when the local disk has become inoperable.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Insert the disk in a supported slot.
  - Step 2** Remove and reinsert the local disk.
  - Step 3** Replace the disk, if an additional disk is available.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

### Message

Local LUN [id] on server [chassisId]/[slotId] operability: [operability]Local LUN [id] on server [id] operability: [operability]

### Explanation

This fault occurs when a LUN has become inoperable

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Make sure the remote storage LUN is accessible to the server.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-inoperable  
**CallHome:** none  
**mibFaultCode:** 843  
**mibFaultName:** fltStorageLocalLunInoperable  
**moClass:** storage:LocalLun  
**Type:** equipment

## fltStorageRaidBatteryInoperable

**Fault Code:**F0531

### Message

RAID Battery on server [chassisId]/[slotId] operability: [operability]RAID Battery on server [id] operability: [operability]

### Explanation

This fault occurs when the RAID battery voltage is below the normal operating range.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Replace the RAID battery.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-inoperable

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

mibFaultCode: 531
mibFaultName: fltStorageRaidBatteryInoperable
moClass: storage:RaidBattery
Type: equipment

```

## Service Profile-Related Faults

This section contains faults raised as a result of issues related to the service profile associated with a server.

### fltLsComputeBindingAssignmentRequirementsNotMet

**Fault Code:**F0689

#### Message

Assignment of service profile [name] to server [pnDn] failed

#### Explanation

The server could not be assigned to the selected service profile. This fault typically occurs as a result of one of the following issues:

- The selected server does not meet the requirements of the service profile.
- If the service profile was configured for restricted migration, the selected server does not match the currently or previously assigned server.

#### Recommended Action

If you see this fault, select a different server that meets the requirements of the service profile or matches the currently or previously assigned server.

---

#### Fault Details

```

Severity: minor
Cause: assignment-failed
CallHome: none
mibFaultCode: 689
mibFaultName: fltLsComputeBindingAssignmentRequirementsNotMet
moClass: ls:ComputeBinding
Type: server

```

### fltLsServerAssociationFailed

**Fault Code:**F0332

#### Message

Service profile [name] association failed for [pnDn]

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

The service profile could not be associated with the server. This fault typically occurs because Cisco UCS Manager cannot communicate with one or more of the following:

- Fabric interconnect
- CIMC on the server
- SAS controller driver
- Server

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the FSM tab for the server and service profile to determine why the association failed.
- Step 2** If the server is stuck in an inappropriate state, such as booting, power cycle the server.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: association-failed
CallHome: diagnostic
mibFaultCode: 332
mibFaultName: fltLsServerAssociationFailed
moClass: ls:Server
Type: server
```

## fltLsServerConfigFailure

### Fault Code:F0327

### Message

Service profile [name] configuration failed due to [configQualifier]

### Explanation

The named configuration qualifier is not available. This fault typically occurs because Cisco UCS Manager cannot successfully deploy the service profile due to a lack of resources that meet the named qualifier. For example, this fault can occur if the following occurs:

- The service profile is configured for a server adapter with vHBAs, and the adapter on the server does not support vHBAs.
- The service profile is created from a template which includes a server pool, and the server pool is empty.
- The local disk configuration policy in the service profile specifies the No Local Storage mode, but the server contains local disks.

### Recommended Action

If you see this fault, take the following actions:

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- 
- Step 1** Check the status of the server pool associated with the service profile. If the pool is empty, add more blade servers to it.
- Step 2** Check the state of the server and ensure that it is in either the discovered or unassociated state.
- Step 3** If the server is associated or undiscovered, do one of the following:
- Discover the server.
  - Disassociate the server from the current service profile.
  - Select another server to associate with the service profile.
- Step 4** Review each policy in the service profile and verify that the selected server meets the requirements in the policy.
- Step 5** If the server does not meet the requirements of the service profile, do one of the following:
- Modify the service profile to match the server.
  - Select another server that does meet the requirements to associate with the service profile.
- Step 6** If you can verify that the server meets the requirements of the service profile, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: configuration-failure
CallHome: diagnostic
mibFaultCode: 327
mibFaultName: fltLsServerConfigFailure
moClass: ls:Server
Type: server
```

## fltLsServerDiscoveryFailed

**Fault Code:**F0326

### Message

Service profile [name] discovery failed

### Explanation

The shallow discovery that occurs when the server associated with service profile fails. If the server is up and the data path is working, this fault typically occurs as a result of one of the following issues:

- Cisco UCS Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the FSM tab and view the current state of the server and any FSM operations.
- Step 2** Check the error descriptions and see if any server components indicate a failure.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

- Step 3** If the server or a server component has failed, do the following:
- Check the operational state of the server.
  - If the server is not operable, reacknowledge the server.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

**Severity:** major  
**Cause:** discovery-failed  
**CallHome:** none  
**mibFaultCode:** 326  
**mibFaultName:** fltLsServerDiscoveryFailed  
**moClass:** ls:Server  
**Type:** server

## **fltLsServerFailed**

### **Fault Code:F0324**

### **Message**

Service profile [name] failed

### **Explanation**

Server has failed. This fault typically occurs if the adapter power on self-test results in major and critical errors.

### **Recommended Action**

If you see this fault, take the following actions:

---

- Step 1** Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

**Severity:** major  
**Cause:** server-failed  
**CallHome:** none  
**mibFaultCode:** 324  
**mibFaultName:** fltLsServerFailed  
**moClass:** ls:Server  
**Type:** server

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fltLsServerInaccessible

**Fault Code:**F0331

### Message

Service profile [name] cannot be accessed

### Explanation

Cisco UCS Manager cannot communicate with the CIMC on the server. This fault typically occurs as a result of one of the following issues:

- The server port or ports have failed.
- The I/O module is offline.
- The BMC has failed.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If Cisco UCS Manager shows that the CIMC is down, physically reseal the server.
- Step 2** If Cisco UCS Manager shows that the server ports have failed, attempt to enable them.
- Step 3** If the I/O module is offline, check for faults on that component.
- Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: server-inaccessible
CallHome: none
mibFaultCode: 331
mibFaultName: fltLsServerInaccessible
moClass: ls:Server
Type: server
```

## fltLsServerMaintenanceFailed

**Fault Code:**F0329

### Message

Service profile [name] maintenance failed

### Explanation

Cisco UCS Manager currently does not use this fault.

### Recommended Action

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

---

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Fault Details

**Severity:** major  
**Cause:** maintenance-failed  
**CallHome:** none  
**mibFaultCode:** 329  
**mibFaultName:** fltLsServerMaintenanceFailed  
**moClass:** ls:Server  
**Type:** server

## fltLsServerRemoved

### Fault Code:F0330

### Message

Service profile [name] underlying resource removed

### Explanation

Cisco UCS Manager cannot access the server associated with the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically removed from the slot.
- The server is not available.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the server was removed from the slot, reinsert the server in the slot.
- Step 2** If the server was not removed, remove and reinsert the server.**NOTE:** If the server is operable, this action can be disruptive to current operations.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** major  
**Cause:** equipment-removed  
**CallHome:** none  
**mibFaultCode:** 330  
**mibFaultName:** fltLsServerRemoved  
**moClass:** ls:Server  
**Type:** server

## fltLsServerServer-unfulfilled

### Fault Code:F0337

### Message

Server [pnDn] does not fulfill Service profile [name] due to [configQualifier]

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### **Explanation**

The server no longer meets the qualification requirements of the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically changed.
- A required component of the server has failed.

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Check the server inventory compare to the service profile qualifications.
- Step 2** If the server inventory does not match the service profile qualifications, do one of the following:
- Associate the server with a different service profile.
  - Ensure the server has sufficient resources to qualify for the current service profile.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### **Fault Details**

```
Severity: warning
Cause: server-failed
CallHome: none
mibFaultCode: 337
mibFaultName: fltLsServerServerUnfulfilled
moClass: ls:Server
Type: server
```

## **fltLsServerUnassociated**

**Fault Code:**F0334

### **Message**

Service profile [name] is not associated

### **Explanation**

The service profile has not yet been associated with a server or a server pool. This fault typically occurs as a result of one of the following issues:

- There is no acceptable server in the server pool.
- The association failed.

### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** If you did not intend to associate the service profile, ignore the fault.
- Step 2** If you did intend to associate the service profile, check the association failure fault.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** warning  
**Cause:** unassociated  
**CallHome:** none

**Type:** server

## fltLsmaintMaintPolicyUnresolvableScheduler

**Fault Code:**F0795

#### Message

Schedule [schedName] referenced by maintenance policy [name] does not exist

#### Explanation

The schedule that is referenced by the maintenance policy does not exist. This fault typically occurs as a result of one of the following issues:

- The schedule does not exist.
- The schedule was deleted.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check if the named schedule exists. If it is deleted or missing, try to create it.
- Step 2** If the named schedule is deleted or missing, recreate it.
- Step 3** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** warning  
**Cause:** non-existent-scheduler  
**CallHome:** none  
**mibFaultCode:** 795  
**mibFaultName:** fltLsmaintMaintPolicyUnresolvableScheduler  
**moClass:** lsmaint:MaintPolicy  
**Type:** server

## System Event Log-Related Faults

This section contains faults raised as a result of issues related to the system event log (SEL) in the Cisco UCS instance.

### fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure

**Fault Code:**F0747

#### Message

Auto core transfer failure at remote server [hostname]:[path] [exportFailureReason]

#### Explanation

This fault occurs when Cisco UCS Manager cannot transfer a core file to a remote TFTP server. This is typically the result of one of the following issues:

- The remote TFTP server is not accessible.
- One or more of the parameters for the TFTP server that are specified for the core export target, such as path, port, and server name, are incorrect.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify the connectivity to the remote server.
  - Step 2** Verify the path information of the remote server.
  - Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

```
Severity: warning
Cause: tftp-server-error
CallHome: none
mibFaultCode: 747
mibFaultName: fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure
moClass: sysdebug:AutoCoreFileExportTarget
Type: sysdebug
```

### fltSysdebugMEpLogMEpLogFull

**Fault Code:**F0462

#### Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault typically occurs because Cisco UCS Manager could not transfer the SEL file to the location specified in the SEL policy. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify the configuration of the SEL policy to ensure that the location, user, and password provided are correct.
- Step 2** If you do want to transfer and clear the SEL and the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: info
Cause: log-capacity
CallHome: none
mibFaultCode: 462
mibFaultName: fltSysdebugMEpLogMEpLogFull
moClass: sysdebug:MEpLog
Type: operational
```

## fltSysdebugMEpLogMEpLogLog

### Fault Code:F0460

### Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

### Explanation

This fault typically occurs because Cisco UCS Manager has detected that the system event log (SEL) on the server is approaching full capacity. The available capacity in the log is low. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

### Recommended Action

If you see this fault, you can clear the SEL in Cisco UCS Manager if desired.

---

### Fault Details

```
Severity: info
Cause: log-capacity
CallHome: none
mibFaultCode: 460
mibFaultName: fltSysdebugMEpLogMEpLogLog
moClass: sysdebug:MEpLog
Type: operational
```

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fltSysdebugMEpLogMEpLogVeryLow

**Fault Code:**F0461

### Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

### Explanation

This fault typically occurs because Cisco UCS Manager has detected that the system event log (SEL) on the server is almost full. The available capacity in the log is very low. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

### Recommended Action

If you see this fault, you can clear the SEL in Cisco UCS Manager if desired.

---

### Fault Details

**Severity:** info  
**Cause:** log-capacity  
**CallHome:** none  
**mibFaultCode:** 461  
**mibFaultName:** fltSysdebugMEpLogMEpLogVeryLow  
**moClass:** sysdebug:MEpLog  
**Type:** operational

## fltSysdebugMEpLogTransferError

**Fault Code:**F0532

### Message

Server [chassisId]/[slotId] [type] transfer failed: [operState]Server [id] [type] transfer failed: [operState]

### Explanation

This fault occurs when the transfer of a managed endpoint log file, such as the SEL, fails.

### Recommended Action

If you see this fault, take the following actions:

---

- Step 1** If the fault is related to the SEL, verify the connectivity to the CIMC on the server.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** info  
**Cause:** file-transfer-failed

## Traffic Monitoring-related Faults

This section contains faults caused by issues related to traffic monitoring.

### fltFabricMonSpanConfigFail

**Fault Code:**F0757

**Message**

Configuration for traffic monitor [name] failed, reason: [configFailReason]

**Explanation**

This fault typically occurs when the configuration of a traffic monitoring session is incorrect.

**Recommended Action**

If you see this fault, correct the configuration problem provided in the fault description.

---

**Fault Details**

```
Severity: major
Cause: config-error
CallHome: none
mibFaultCode: 757
mibFaultName: fltFabricMonSpanConfigFail
moClass: fabric:Mon
Type: network
```

## Virtual Network Interface-Related Faults

This section contains faults caused by issues related to a virtual network interface allocation in a service profile.

### fltDcxNsFailed

**Fault Code:**F0304

**Message**

Server [chassisId]/[slotId] (service profile: [assignedToDn]) virtual network interface allocation failed. Server [id] (service profile: [assignedToDn]) virtual network interface allocation failed.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

The adapter's vif-namespace activation failed due to insufficient resources. Cisco UCS Manager raises this fault when the number of deployed VIF resources exceeds the maximum VIF resources available on the adapter connected to the fabric interconnect.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the NS "size" and "used" resources to determine by how many vNICs the adapter exceeded the maximum.
  - Step 2** Unconfigure or delete all vNICs on the adapter above the maximum number.
  - Step 3** Add additional fabric uplinks from the IOM to the corresponding fabric interconnect and reacknowledge the chassis. This increases the "NS size" on the adapter.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: insufficient-resources
CallHome: none
mibFaultCode: 304
mibFaultName: fltDcxNsFailed
moClass: dcx:Ns
Type: server
```

## fltDcxVifLinkState

### Fault Code:F0479

### Message

Virtual interface [id] link state is down

### Explanation

This fault occurs when Cisco UCS cannot send or receive data through an uplink port.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Reenable the uplink port that failed.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: vif-down

### fltDcxVcDown

**Fault Code:**F0283

#### Message

[transport] VIF [chassisId] / [slotId] [switchId]-[id] down, reason: [stateQual][transport] VIF [chassisId] / [id] [switchId]-[id] down, reason: [stateQual]

#### Explanation

This fault typically occurs when a fabric interconnect reports one of the following connectivity states for a virtual interface:

- Down
- Errored
- Unavailable

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the uplink physical interface is up.
  - Step 2** If the vNIC/vHBA is configured for a pin group, verify that the pin group targets are configured correctly.
  - Step 3** In the Network Control Policy for the vNIC, verify that the 'Action on Uplink Fail' field is set to 'warning'.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major

### fltDcxVcMgmt-vif-down

**Fault Code:**F0459

#### Message

IOM [chassisId] / [slotId] ([switchId]) management VIF [id] down, reason [stateQual]

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### Explanation

This fault occurs when the transport VIF for an I/O module is down. Cisco UCS Manager raises this fault when a fabric interconnect reports the connectivity state on virtual interface as one of the following:

- Down
- Errored
- Unavailable

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Verify that the chassis discovery has gone through successfully. Check the states on all communicating ports from end to end.
- Step 2** If connectivity seems correct, decommission and recommission the chassis.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

## VLAN-Related Faults

This section contains faults caused by issues related to a VLAN.

### fltFabricEthLanEpMissingPrimaryVlan

**Fault Code:**F0835

### Message

Primary vlan missing from fabric: [switchId], port: [slotId]/[portId].

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault occurs when an uplink port or port channel is configured with a primary VLAN that does not exist in the Cisco UCS instance.

### Recommended Action

If you see this fault, take the following action:

- 
- Step 1** Update the configuration of the port or port channel to include a primary VLAN.
  - Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

```
Severity: major
Cause: missing-primary-vlan
CallHome: none
mibFaultCode: 835
mibFaultName: fltFabricEthLanEpMissingPrimaryVlan

## fltFabricVlanMisconfigured

**Fault Code:**F0833

### Message

VLAN [name] is [operState] because of conflicting vlan-id with an fcoe-vlan

### Explanation

This fault typically occurs when VLAN has the same ID as an FCoE VLAN. This issue can cause disruption of traffic.

### Recommended Action

If you see this fault, take the following action:

- 
- Step 1** Check the VLAN ID.
- Step 2** If the ID of the VLAN matches the ID of the FCoE VLAN assigned to a VLAN in the same fabric interconnect, change the ID of either the VLAN or the FCoE VLAN.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

### Fault Details

**Severity:** critical  
**Cause:** vlan-misconfigured  
**CallHome:** none  
**mibFaultCode:** 833  
**mibFaultName:** fltFabricVlanMisconfigured  
**moClass:** fabric:Vlan  
**Type:** network

## fltFabricVlanPrimaryVlanMissingIsolated

**Fault Code:**F0620

### Message

Primary Vlan can not be resolved for isolated vlan [name]

### Explanation

This fault typically occurs when Cisco UCS Manager encounters a problem resolving the primary VLAN ID corresponding to a particular isolated VLAN.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Associate the isolated VLAN with a valid primary VLAN.
- Step 2** If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
-

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Fault Details

**Severity:** minor  
**Cause:** primary-vlan-missing-isolated  
**CallHome:** none  
**mibFaultCode:** 620  
**mibFaultName:** fltFabricVlanPrimaryVlanMissingIsolated  
**moClass:** fabric:Vlan  
**Type:** network

## fltSwVlanPortNsResourceStatus

**Fault Code:**F0549

#### Message

Vlan-Port Resource exceeded

#### Explanation

This fault occurs when the total number of configured VLANs in the Cisco UCS instance has exceeded the allowed maximum number of configured VLANs on the fabric interconnect.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** In the Cisco UCS Manager CLI or Cisco UCS Manager GUI, check the port VLAN count to determine by how many VLANs the system is over the maximum.
- Step 2** Reduce the VLAN port count in one of the following ways:
- Delete VLANs configured on the LAN cloud.
  - Delete VLANs configured on vNICs.
  - Unconfigure one or more vNICs.
  - Unconfigure one or more uplink Ethernet ports on the fabric interconnect.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** critical  
**Cause:** limit-reached  
**CallHome:** diagnostic  
**mibFaultCode:** 549  
**mibFaultName:** fltSwVlanPortNsResourceStatus  
**moClass:** sw:VlanPortNs  
**Type:** management

## VSAN-Related Faults

This section contains faults caused by issues related to a VSAN.

### fltFabricVsanEpErrorDisabled

**Fault Code:**F0797

**Message**

[type] Port [slotId]/[portId] on fabric interconnect [switchId] has VSAN [id] in error disabled statePort channel [portId] on fabric interconnect [switchId] has VSAN [id] in error disabled state

**Explanation**

This fault typically occurs when a port is assigned to a VSAN that has an ID in the restricted range between 3840 and 4078) or is VSAN 4079, which is reserved.

**Recommended Action**

If you see this fault, take the following action:

- 
- Step 1** If the VSAN ID is in the restricted range between 3840 and 4078, do the following:
- a. Delete the port channels on the fabric interconnect.
  - b. Disable uplink trunking on the fabric-interconnect.
  - c. Configure the fabric interconnect for fibre channel switch mode.
- Step 2** If the VSAN is VSAN 4079, which is reserved, assign the port to a non-reserved VSAN.
- Step 3** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

**Fault Details**

**Severity:** major  
**Cause:** vsan-misconfigured  
**CallHome:** none  
**mibFaultCode:** 797  
**mibFaultName:** fltFabricVsanEpErrorDisabled  
**moClass:** fabric:VsanEp  
**Type:** network

### fltFabricVsanErrorDisabled

**Fault Code:**F0796

**Message**

VSAN [name] is [operState]

**Explanation**

This fault typically occurs when the VSAN has an ID in the restricted range between 3840 and 4078, and Fibre Channel end host mode is enabled on the fabric interconnect.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Delete the port channels on the fabric interconnect.
  - Step 2** Disable uplink trunking on the fabric-interconnect.
  - Step 3** Configure the fabric interconnect for fibre channel switch mode.
  - Step 4** If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.
- 

#### Fault Details

**Severity:** major  
**Cause:** vsan-misconfigured  
**CallHome:** none  
**mibFaultCode:** 796  
**mibFaultName:** fltFabricVsanErrorDisabled  
**moClass:** fabric:Vsan  
**Type:** network

## CHAPTER 3

# FSM Faults

---

This chapter provides information about the faults that may be raised during one or more stages of an FSM task.

**Note**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

---

### fsmFailAaaEpUpdateEp

**Fault Code:**F999622

**Message**

[FSM:FAILED]: sam:dme:AaaEpUpdateEp

**Explanation**

None set.

**Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

**Fault Details**

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999622  
**mibFaultName:** fsmFailAaaEpUpdateEp  
**moClass:** aaa:Ep  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmFailAaaRealmUpdateRealm

**Fault Code:**F999620

### Message

[FSM:FAILED]: sam:dme:AaaRealmUpdateRealm

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999620  
**mibFaultName:** fsmFailAaaRealmUpdateRealm  
**moClass:** aaa:Realm  
**Type:** fsm

## fsmFailAaaUserEpUpdateUserEp

**Fault Code:**F999621

### Message

[FSM:FAILED]: sam:dme:AaaUserEpUpdateUserEp

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999621  
**mibFaultName:** fsmFailAaaUserEpUpdateUserEp  
**moClass:** aaa>UserEp  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailAdaptorExtEthIfPathReset

**Fault Code:**F999892

### Message

[FSM:FAILED]: sam:dme:AdaptorExtEthIfPathReset

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999892  
**mibFaultName:** fsmFailAdaptorExtEthIfPathReset  
**moClass:** adaptor:ExtEthIf  
**Type:** fsm

## fsmFailAdaptorHostEthIfCircuitReset

**Fault Code:**F999897

### Message

[FSM:FAILED]: sam:dme:AdaptorHostEthIfCircuitReset

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999897  
**mibFaultName:** fsmFailAdaptorHostEthIfCircuitReset  
**moClass:** adaptor:HostEthIf  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailAdaptorHostFcIfCircuitReset

**Fault Code:**F999897

### Message

[FSM:FAILED]: sam:dme:AdaptorHostFcIfCircuitReset

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999897  
**mibFaultName:** fsmFailAdaptorHostFcIfCircuitReset  
**moClass:** adaptor:HostFcIf  
**Type:** fsm

## fsmFailAdaptorHostFcIfResetFcPersBinding

**Fault Code:**F999574

### Message

[FSM:FAILED]: sam:dme:AdaptorHostFcIfResetFcPersBinding

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999574  
**mibFaultName:** fsmFailAdaptorHostFcIfResetFcPersBinding  
**moClass:** adaptor:HostFcIf  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailCallhomeEpConfigCallhome

**Fault Code:**F999710

### Message

[FSM:FAILED]: sam:dme:CallhomeEpConfigCallhome

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999710  
**mibFaultName:** fsmFailCallhomeEpConfigCallhome  
**moClass:** callhome:Ep  
**Type:** fsm

## fsmFailCapabilityCatalogueActivateCatalog

**Fault Code:**F1000085

### Message

[FSM:FAILED]: sam:dme:CapabilityCatalogueActivateCatalog

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000085  
**mibFaultName:** fsmFailCapabilityCatalogueActivateCatalog  
**moClass:** capability:Catalogue  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## **fsmFailCapabilityCatalogueDeployCatalogue**

**Fault Code:**F999971

### **Message**

[FSM:FAILED]: sam:dme:CapabilityCatalogueDeployCatalogue

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999971  
**mibFaultName:** fsmFailCapabilityCatalogueDeployCatalogue  
**moClass:** capability:Catalogue  
**Type:** fsm

## **fsmFailCapabilityMgmtExtensionActivateMgmtExt**

**Fault Code:**F100086

### **Message**

[FSM:FAILED]: sam:dme:CapabilityMgmtExtensionActivateMgmtExt

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100086  
**mibFaultName:** fsmFailCapabilityMgmtExtensionActivateMgmtExt  
**moClass:** capability:MgmtExtension  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailCapabilityUpdaterUpdater

**Fault Code:**F999944

### Message

[FSM:FAILED]: sam:dme:CapabilityUpdaterUpdater

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999944  
**mibFaultName:** fsmFailCapabilityUpdaterUpdater  
**moClass:** capability:Updater  
**Type:** fsm

## fsmFailCommSvcEpRestartWebSvc

**Fault Code:**F999617

### Message

[FSM:FAILED]: sam:dme:CommSvcEpRestartWebSvc

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999617  
**mibFaultName:** fsmFailCommSvcEpRestartWebSvc  
**moClass:** comm:SvcEp  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmFailCommSvcEpUpdateSvcEp

**Fault Code:**F999616

### Message

[FSM:FAILED]: sam:dme:CommSvcEpUpdateSvcEp

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999616  
**mibFaultName:** fsmFailCommSvcEpUpdateSvcEp  
**moClass:** comm:SvcEp  
**Type:** fsm

## fsmFailComputeBladeDiag

**Fault Code:**F999575

### Message

[FSM:FAILED]: sam:dme:ComputeBladeDiag

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999575  
**mibFaultName:** fsmFailComputeBladeDiag  
**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputeBladeDiscover

**Fault Code:**F999560

### Message

[FSM:FAILED]: sam:dme:ComputeBladeDiscover

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999560  
**mibFaultName:** fsmFailComputeBladeDiscover  
**moClass:** compute:Blade  
**Type:** fsm

## fsmFailComputeBladeUpdateBoardController

**Fault Code:**F999970

### Message

[FSM:FAILED]: sam:dme:ComputeBladeUpdateBoardController

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999970  
**mibFaultName:** fsmFailComputeBladeUpdateBoardController  
**moClass:** compute:Blade  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmFailComputePhysicalActivateAdaptor

**Fault Code:**F100084

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalActivateAdaptor

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

```
Severity: critical
Cause: fsm-failed
CallHome: none
mibFaultCode: 100084
mibFaultName: fsmFailComputePhysicalActivateAdaptor
moClass: compute:Physical
Type: fsm
```

## fsmFailComputePhysicalActivateBIOS

**Fault Code:**F100319

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalActivateBIOS

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

```
Severity: critical
Cause: fsm-failed
CallHome: none
mibFaultCode: 100319
mibFaultName: fsmFailComputePhysicalActivateBIOS
moClass: compute:Physical
Type: fsm
```

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputePhysicalAssociate

**Fault Code:**F1000013

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalAssociate

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000013  
**mibFaultName:** fsmFailComputePhysicalAssociate  
**moClass:** compute:Physical  
**Type:** fsm

## fsmFailComputePhysicalBiosRecovery

**Fault Code:**F1000024

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalBiosRecovery

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000024  
**mibFaultName:** fsmFailComputePhysicalBiosRecovery  
**moClass:** compute:Physical  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmFailComputePhysicalCmosReset

**Fault Code:**F100026

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalCmosReset

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none

**mibFaultCode:** 1000156  
**mibFaultName:** fsmFailComputePhysicalDiagnosticInterrupt  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputePhysicalDisassociate

**Fault Code:**F100014

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalDisassociate

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100014  
**mibFaultName:** fsmFailComputePhysicalDisassociate  
**moClass:** compute:Physical  
**Type:** fsm

## fsmFailComputePhysicalHardShutdown

**Fault Code:**F100018

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalHardShutdown

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100018  
**mibFaultName:** fsmFailComputePhysicalHardShutdown  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputePhysicalHardreset

**Fault Code:**F1000021

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalHardreset

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000021  
**mibFaultName:** fsmFailComputePhysicalHardreset  
**moClass:** compute:Physical  
**Type:** fsm

## fsmFailComputePhysicalPowerCap

**Fault Code:**F999984

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalPowerCap

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999984  
**mibFaultName:** fsmFailComputePhysicalPowerCap  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputePhysicalPowercycle

**Fault Code:**F100020

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalPowercycle

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100020  
**mibFaultName:** fsmFailComputePhysicalPowercycle  
**moClass:** compute:Physical  
**Type:** fsm

## fsmFailComputePhysicalResetBmc

**Fault Code:**F100027

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalResetBmc

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100027  
**mibFaultName:** fsmFailComputePhysicalResetBmc  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmFailComputePhysicalResetKvm

**Fault Code:**F1000203

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalResetKvm

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000203  
**mibFaultName:** fsmFailComputePhysicalResetKvm  
**moClass:** compute:Physical  
**Type:** fsm

## fsmFailComputePhysicalSoftShutdown

**Fault Code:**F1000017

### Message

[FSM:FAILED]: sam:dme:ComputePhysicalSoftShutdown

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000017  
**mibFaultName:** fsmFailComputePhysicalSoftShutdown  
**moClass:** compute:Physical

[FSM:FAILED]: sam:dme:LicenseDownloaderDownload

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999690  
**mibFaultName:** fsmFailLicenseDownloaderDownload  
**moClass:** license:Downloader  
**Type:** fsm

## fsmFailLicenseFileClear

**Fault Code:**F100092

### Message

[FSM:FAILED]: sam:dme:LicenseFileClear

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 100092  
**mibFaultName:** fsmFailLicenseFileClear  
**moClass:** license:File  
**Type:** fsm

## fsmFailSysdebugTechSupportInitiate

**Fault Code:**F1000052

### Message

[FSM:FAILED]: sam:dme:SysdebugTechSupportInitiate

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 1000052  
**mibFaultName:** fsmFailSysdebugTechSupportInitiate  
**moClass:** sysdebug:TechSupport  
**Type:** fsm

## fsmFailSysfileMutationGlobal

**Fault Code:**F999641

### Message

[FSM:FAILED]: sam:dme:SysfileMutationGlobal

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed

## fsmFailSysfileMutationSingle

**Fault Code:**F999640

### Message

[FSM:FAILED]: sam:dme:SysfileMutationSingle

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999640  
**mibFaultName:** fsmFailSysfileMutationSingle  
**moClass:** sysfile:Mutation  
**Type:** fsm

## fsmFailVmLifeCyclePolicyConfig

**Fault Code:**F999919

### Message

[FSM:FAILED]: sam:dme:VmLifeCyclePolicyConfig

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** critical  
**Cause:** fsm-failed  
**CallHome:** none  
**mibFaultCode:** 999919

## fsmRmtErrComputeBladeDiag:NicUnconfigLocal

**Fault Code:**F77975

### Message

[FSM:STAGE:REMOTE-ERROR]: Unconfigure adapter of server [chassisId]/[slotId] diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:NicUnconfigLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** nic-unconfig-local-failed  
**CallHome:** none  
**mibFaultCode:** 77975  
**mibFaultName:** fsmRmtErrComputeBladeDiagNicUnconfigLocal

## fsmRmtErrComputeBladeDiscover:BmcShutdownDiscovered

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: Shutdown the server [chassisId]/[slotId]; deep discovery completed(FSM-STAGE:sam:dme:ComputeBladeDiscover:BmcShutdownDiscovered)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** bmc-shutdown-discovered-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeBladeDiscoverBmcShutdownDiscovered  
**moClass:** compute:Blade  
**Type:** fsm

## fsmRmtErrComputeBladeDiscover:ConfigFeLocal

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: configuring primary fabric interconnect access to server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:ConfigFeLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** config-fe-local-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeBladeDiscoverConfigFeLocal  
**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputeBladeDiscover:ConfigFePeer

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: configuring secondary fabric interconnect access to server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:ConfigFePeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** config-fe-peer-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeBladeDiscoverConfigFePeer  
**moClass:** compute:Blade  
**Type:** fsm

## fsmRmtErrComputeBladeDiscover:ConfigUserAccess

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: configuring external user access to server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:ConfigUserAccess)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** config-user-access-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeBladeDiscoverConfigUserAccess

## fsmRmtErrComputeBladeDiscover:HandlePooling

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: Invoke post-discovery policies on server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:HandlePooling)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** handle-pooling-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeBladeDiscoverHandlePooling  
**moClass:** compute:Blade  
**Type:** fsm

## fsmRmtErrComputeBladeDiscover:NicConfigPnuOSLocal

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: configure primary adapter in [chassisId]/[slotId] for pre-boot environment(FSM-STAGE:sam:dme:ComputeBladeDiscover:NicConfigPnuOSLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** nic-config-pnuoslocal-failed  
**CallHome:** none  
**mibFaultCode:** 77960

## fsmRmtErrComputeBladeUpdateBoardController:BladePowerOff

**Fault Code:**F78370

### Message

[FSM:STAGE:REMOTE-ERROR]: Power off server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeUpdateBoardController:BladePowerOff)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** blade-power-off-failed  
**CallHome:** none  
**mibFaultCode:** 78370  
**mibFaultName:** fsmRmtErrComputeBladeUpdateBoardControllerBladePowerOff  
**moClass:** compute:Blade  
**Type:** fsm

**Fault Code:**F78413

### Message

[FSM:STAGE:REMOTE-ERROR]: Upload host agent policy to host agent on server (service profile: [assignedToDn])(FSM-STAGE:sam:dme:ComputePhysicalAssociate:HostOSPolicy)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** hostospolicy-failed  
**CallHome:** none  
**mibFaultCode:** 78413  
**mibFaultName:** fsmRmtErrComputePhysicalAssociateHostOSPolicy  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalBiosRecovery:TeardownVmediaPeer

**Fault Code:**F78424

### Message

[FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:TeardownVmediaPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** teardown-vmedia-peer-failed  
**CallHome:** none  
**mibFaultCode:** 78424  
**mibFaultName:** fsmRmtErrComputePhysicalBiosRecoveryTeardownVmediaPeer  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalBiosRecovery:Wait

**Fault Code:**F78424

### Message

[FSM:STAGE:REMOTE-ERROR]: Waiting for completion of BIOS recovery for server [dn] (up to 10 min)(FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Wait)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** wait-failed  
**CallHome:** none  
**mibFaultCode:** 78424  
**mibFaultName:** fsmRmtErrComputePhysicalBiosRecoveryWait  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalCmosReset:BladePowerOn

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Power on server  
[serverId](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:BladePowerOn)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** blade-power-on-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetBladePowerOn  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalCmosReset:Execute

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Resetting CMOS for server  
[serverId](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:Execute)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetExecute  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalCmosReset:PreSanitize

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Preparing to check hardware configuration server [serverId](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:PreSanitize)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** pre-sanitize-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetPreSanitize  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalCmosReset:ReconfigBios

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Reconfiguring BIOS Settings and Boot Order of server [serverId] for service profile [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:ReconfigBios)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** reconfig-bios-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetReconfigBios  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalCmosReset:ReconfigUuid

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Reconfiguring logical UUID of server [serverId] for service profile [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:ReconfigUuid)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** reconfig-uuid-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetReconfigUuid  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalCmosReset:Sanitize

**Fault Code:**F78426

### Message

[FSM:STAGE:REMOTE-ERROR]: Checking hardware configuration server [serverId](FSM-STAGE:sam:dme:ComputePhysicalCmosReset:Sanitize)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sanitize-failed  
**CallHome:** none  
**mibFaultCode:** 78426  
**mibFaultName:** fsmRmtErrComputePhysicalCmosResetSanitize  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalConfigSoL:Execute

**Fault Code:**F78523

### Message

[FSM:STAGE:REMOTE-ERROR]: configuring SoL interface on server  
[dn](FSM-STAGE:sam:dme:ComputePhysicalConfigSoL:Execute)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78523  
**mibFaultName:** fsmRmtErrComputePhysicalConfigSoLExecute  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalDecommission:CleanupCIMC

**Fault Code:**F78416

### Message

[FSM:STAGE:REMOTE-ERROR]: Cleaning up CIMC configuration for server  
[dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:CleanupCIMC)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** cleanupcimc-failed  
**CallHome:** none  
**mibFaultCode:** 78416  
**mibFaultName:** fsmRmtErrComputePhysicalDecommissionCleanupCIMC  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalDecommission:Execute

**Fault Code:**F78416

### Message

[FSM:STAGE:REMOTE-ERROR]: Decommissioning server  
[dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:Execute)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78416  
**mibFaultName:** fsmRmtErrComputePhysicalDecommissionExecute  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalDecommission:StopVMediaLocal

**Fault Code:**F78416

### Message

[FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server  
[dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:StopVMediaLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** stopvmedia-local-failed  
**CallHome:** none  
**mibFaultCode:** 78416  
**mibFaultName:** fsmRmtErrComputePhysicalDecommissionStopVMediaLocal  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalDecommission:StopVMediaPeer

**Fault Code:**F78416

### Message

[FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:StopVMediaPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** stopvmedia-peer-failed  
**CallHome:** none  
**mibFaultCode:** 78416  
**mibFaultName:** fsmRmtErrComputePhysicalDecommissionStopVMediaPeer  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalDiagnosticInterrupt:Execute

**Fault Code:**F78556

### Message

[FSM:STAGE:REMOTE-ERROR]: Execute Diagnostic Interrupt(NMI) for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDiagnosticInterrupt:Execute)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78556  
**mibFaultName:** fsmRmtErrComputePhysicalDiagnosticInterruptExecute  
**moClass:** compute:Physical  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputePhysicalDisassociate:BiosPostCompletion

**Fault Code:**F78414

### Message

[FSM:STAGE:REMOTE-ERROR]: Waiting for BIOS POST completion from CIMC on server [serverId](FSM-STAGE:sam:dme:ComputePhysicalDisassociate:BiosPostCompletion)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** bios-post-completion-failed  
**CallHome:** none  
**mibFaultCode:** 78414  
**mibFaultName:** fsmRmtErrComputePhysicalDisassociateBiosPostCompletion  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalDisassociate:BmcConfigPnuOS

**Fault Code:**F78414

### Message

[FSM:STAGE:REMOTE-ERROR]: provisioning a bootable device with a bootable pre-boot image for server(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:BmcConfigPnuOS)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** bmc-config-pnuos-failed  
**CallHome:** none

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78427  
**mibFaultName:** fsmRmtErrComputePhysicalResetBmcExecute  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputePhysicalResetKvm:Execute

**Fault Code:**F78603

### Message

[FSM:STAGE:REMOTE-ERROR]: Execute KVM Reset for server  
[dn](FSM-STAGE:sam:dme:ComputePhysicalResetKvm:Execute)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** execute-failed  
**CallHome:** none  
**mibFaultCode:** 78603  
**mibFaultName:** fsmRmtErrComputePhysicalResetKvmExecute  
**moClass:** compute:Physical  
**Type:** fsm

## fsmRmtErrComputeRackUnitDiscover:ConfigUserAccess

**Fault Code:**F77960

### Message

[FSM:STAGE:REMOTE-ERROR]: configuring external user access to server [id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:ConfigUserAccess)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** config-user-access-failed  
**CallHome:** none  
**mibFaultCode:** 77960  
**mibFaultName:** fsmRmtErrComputeRackUnitDiscoverConfigUserAccess  
**moClass:** compute:RackUnit  
**Type:** fsm

## fsmRmtErrComputeRackUnitOffline:CleanupPeer

**Fault Code:**F78610

### Message

[FSM:STAGE:REMOTE-ERROR]: cleaning host entries on peer fabric-interconnect(FSM-STAGE:sam:dme:ComputeRackUnitOffline:CleanupPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** cleanup-peer-failed  
**CallHome:** none  
**mibFaultCode:** 78610  
**mibFaultName:** fsmRmtErrComputeRackUnitOfflineCleanupPeer  
**moClass:** compute:RackUnit  
**Type:** fsm

## fsmRmtErrComputeRackUnitOffline:SwUnconfigureLocal

**Fault Code:**F78610

### Message

[FSM:STAGE:REMOTE-ERROR]: Unconfiguring fabric-interconnect connectivity to CIMC of server [id](FSM-STAGE:sam:dme:ComputeRackUnitOffline:SwUnconfigureLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-unconfigure-local-failed  
**CallHome:** none  
**mibFaultCode:** 78610  
**mibFaultName:** fsmRmtErrComputeRackUnitOfflineSwUnconfigureLocal  
**moClass:** compute:RackUnit  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmRmtErrComputeRackUnitOffline:SwUnconfigurePeer

**Fault Code:**F78610

### Message

[FSM:STAGE:REMOTE-ERROR]: Unconfiguring fabric-interconnect connectivity to CIMC of server [id](FSM-STAGE:sam:dme:ComputeRackUnitOffline:SwUnconfigurePeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-unconfigure-peer-failed  
**CallHome:** none

## fsmRmtErrEtherServerIntFloConfigSpeed:Configure

**Fault Code:**F78727

### Message

[FSM:STAGE:REMOTE-ERROR]: Configure admin speed for [dn](FSM-STAGE:sam:dme:EtherServerIntFloConfigSpeed:Configure)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** configure-failed  
**CallHome:** none  
**mibFaultCode:** 78727  
**mibFaultName:** fsmRmtErrEtherServerIntFloConfigSpeedConfigure  
**moClass:** ether:ServerIntFlo  
**Type:** fsm

## fsmRmtErrExtvmmEpClusterRole:SetLocal

**Fault Code:**F78694

### Message

[FSM:STAGE:REMOTE-ERROR]: external VM management cluster role configuration on local fabric(FSM-STAGE:sam:dme:ExtvmmEpClusterRole:SetLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** set-local-failed  
**CallHome:** none  
**mibFaultCode:** 78694  
**mibFaultName:** fsmRmtErrExtvmmEpClusterRoleSetLocal  
**moClass:** extvmm:Ep  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmRmtErrExtvmmEpClusterRole:SetPeer

**Fault Code:**F78694

### Message

[FSM:STAGE:REMOTE-ERROR]: external VM management cluster role configuration on peer fabric(FSM-STAGE:sam:dme:ExtvmmEpClusterRole:SetPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** set-peer-failed  
**CallHome:** none  
**mibFaultCode:** 78694  
**mibFaultName:** fsmRmtErrExtvmmEpClusterRoleSetPeer  
**moClass:** extvmm:Ep  
**Type:** fsm

## fsmRmtErrExtvmmKeyStoreCertInstall:SetLocal

**Fault Code:**F78320

### Message

[FSM:STAGE:REMOTE-ERROR]: external VM manager certificate configuration on local fabric(FSM-STAGE:sam:dme:ExtvmmKeyStoreCertInstall:SetLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** set-local-failed  
**CallHome:** none

### Message

[FSM:STAGE:REMOTE-ERROR]: validation for license file [fileName] on subordinate(FSM-STAGE:sam:dme:LicenseDownloaderDownload:ValidateRemote)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** validate-remote-failed  
**CallHome:** none  
**mibFaultCode:** 78090  
**mibFaultName:** fsmRmtErrLicenseDownloaderDownloadValidateRemote  
**moClass:** license:Downloader  
**Type:** fsm

## fsmRmtErrLicenseFileClear:Local

**Fault Code:**F78492

### Message

[FSM:STAGE:REMOTE-ERROR]: Clearing license on primary(FSM-STAGE:sam:dme:LicenseFileClear:Local)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** local-failed  
**CallHome:** none  
**mibFaultCode:** 78492  
**mibFaultName:** fsmRmtErrLicenseFileClearLocal  
**moClass:** license:File  
**Type:** fsm

## fsmRmtErrLicenseFileClear:Remote

**Fault Code:**F78492

### Message

[FSM:STAGE:REMOTE-ERROR]: Clearing license on subordinate(FSM-STAGE:sam:dme:LicenseFileClear:Remote)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** remote-failed  
**CallHome:** none  
**mibFaultCode:** 78492  
**mibFaultName:** fsmRmtErrLicenseFileClearRemote  
**moClass:** license:File  
**Type:** fsm

## fsmRmtErrLicenseFileInstall:Local

**Fault Code:**F78491

### Message

[FSM:STAGE:REMOTE-ERROR]: Installing license on primary(FSM-STAGE:sam:dme:LicenseFileInstall:Local)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** local-failed  
**CallHome:** none  
**mibFaultCode:** 78491

## fsmRmtErrSyntheticFsObjCreate:createLocal

**Fault Code:**F78081

### Message

[FSM:STAGE:REMOTE-ERROR]: create on primary(FSM-STAGE:sam:dme:SyntheticFsObjCreate:createLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** create-local-failed  
**CallHome:** none  
**mibFaultCode:** 78081  
**mibFaultName:** fsmRmtErrSyntheticFsObjCreateCreateLocal  
**moClass:** synthetic:FsoObj  
**Type:** fsm

## fsmRmtErrSyntheticFsObjCreate:createRemote

**Fault Code:**F78081

### Message

[FSM:STAGE:REMOTE-ERROR]: create on secondary(FSM-STAGE:sam:dme:SyntheticFsObjCreate:createRemote)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** create-remote-failed  
**CallHome:** none  
**mibFaultCode:** 78081  
**mibFaultName:** fsmRmtErrSyntheticFsObjCreateCreateRemote

**Fault Code:**F16852

### Message

[FSM:STAGE:FAILEDIRETRY]: Enabe path [side]([switchId]) on server [chassisId]/[slotId](FSM-STAGE:sam:dme:AdaptorExtEthIfPathReset:Enable)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** enable-failed  
**CallHome:** none  
**mibFaultCode:** 16852  
**mibFaultName:** fsmStFailAdaptorExtEthIfPathResetEnable  
**moClass:** adaptor:ExtEthIf  
**Type:** fsm

## fsmStFailCapabilityUpdaterUpdater:DeleteLocal

**Fault Code:**F16904

### Message

[FSM:STAGE:FAILED|RETRY]: deleting temp image [fileName] on local(FSM-STAGE:sam:dme:CapabilityUpdaterUpdater:DeleteLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** delete-local-failed  
**CallHome:** none  
**mibFaultCode:** 16904  
**mibFaultName:** fsmStFailCapabilityUpdaterUpdaterDeleteLocal  
**moClass:** capability:Updater  
**Type:** fsm

## fsmStFailCapabilityUpdaterUpdater:EvaluateStatus

**Fault Code:**F16904

### Message

[FSM:STAGE:FAILED|RETRY]: evaluating status of update(FSM-STAGE:sam:dme:CapabilityUpdaterUpdater:EvaluateStatus)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** evaluate-status-failed  
**CallHome:** none  
**mibFaultCode:** 16904  
**mibFaultName:** fsmStFailCapabilityUpdaterUpdaterEvaluateStatus  
**moClass:** capability:Updater  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## **fsmStFailCapabilityUpdaterUpdater:Local**

**Fault Code:**F16904

### **Message**

[FSM:STAGE:FAILEDIRETRY]: downloading catalog file [fileName] from [server](FSM-STAGE:sam:dme:CapabilityUpdaterUpdater:Local)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** local-failed  
**CallHome:** none  
**mibFaultCode:** 16904  
**mibFaultName:** fsmStFailCapabilityUpdaterUpdaterLocal  
**moClass:** capability:Updater  
**Type:** fsm

## **fsmStFailCapabilityUpdaterUpdater:RescanImages**

**Fault Code:**F16904

### **Message**

[FSM:STAGE:FAILEDIRETRY]: rescanning image files(FSM-STAGE:sam:dme:CapabilityUpdaterUpdater:RescanImages)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** rescan-images-failed

## fsmStFailComputeBladeDiag:EnableServerConnSwA

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Enable server [chassisId]/[slotId] connectivity on fabric A in preparation for network traffic tests on fabric A(FSM-STAGE:sam:dme:ComputeBladeDiag:EnableServerConnSwA)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** enable-server-conn-sw-afailed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagEnableServerConnSwA  
**moClass:** compute:Blade  
**Type:** fsm

## **fsmStFailComputeBladeDiag:EnableServerConnSwB**

**Fault Code:**F16535

### **Message**

[FSM:STAGE:FAILEDIRETRY]: Enable server [chassisId]/[slotId] connectivity on fabric B in preparation for network traffic tests on fabric B(FSM-STAGE:sam:dme:ComputeBladeDiag:EnableServerConnSwB)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** enable-server-conn-sw-bfailed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagEnableServerConnSwB  
**moClass:** compute:Blade  
**Type:** fsm

## **fsmStFailComputeBladeDiag:EvaluateStatus**

**Fault Code:**F16535

### **Message**

[FSM:STAGE:FAILEDIRETRY]: Evaluating status; diagnostics completed(FSM-STAGE:sam:dme:ComputeBladeDiag:EvaluateStatus)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** evaluate-status-failed

### Message

[FSM:STAGE:FAILEDIRETRY]: Trigger network traffic tests on fabric A on server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiag:StartFabricATrafficTest)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** start-fabricatraffic-test-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagStartFabricATrafficTest  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiag:StartFabricBTrafficTest

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILEDIRETRY]: Trigger network tests on fabric B for server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiag:StartFabricBTrafficTest)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** start-fabricbtraffic-test-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagStartFabricBTrafficTest  
**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmStFailComputeBladeDiag:StopVMediaLocal

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Stop VMedia for server [chassisId]/[slotId] for diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:StopVMediaLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** stopvmedia-local-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagStopVMediaLocal  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiag:StopVMediaPeer

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Stop VMedia for server [chassisId]/[slotId] for diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:StopVMediaPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** stopvmedia-peer-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagStopVMediaPeer  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiag:SwConfigLocal

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILEDIRETRY]: Configure primary fabric interconnect in server [chassisId]/[slotId] for diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:SwConfigLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-config-local-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagSwConfigLocal  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiag:SwConfigPeer

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILEDIRETRY]: Configure secondary fabric interconnect in server [chassisId]/[slotId] for diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:SwConfigPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-config-peer-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagSwConfigPeer  
**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmStFailComputeBladeDiag:SwUnconfigLocal

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Unconfigure primary fabric interconnect for server [chassisId]/[slotId] in diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:SwUnconfigLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-unconfig-local-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagSwUnconfigLocal

## fsmStFailComputeBladeDiag:SwUnconfigPeer

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Unconfigure secondary fabric interconnect for server [chassisId]/[slotId] in diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:SwUnconfigPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-unconfig-peer-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagSwUnconfigPeer  
**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmStFailComputeBladeDiag:UnconfigUserAccess

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILEDIRETRY]: Unconfigure external user access to server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiag:UnconfigUserAccess)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** unconfig-user-access-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagUnconfigUserAccess  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiag:serialDebugConnect

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILEDIRETRY]: Connect to pre-boot environment agent on server  
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiag:serialDebugConnect)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** serial-debug-connect-failed  
**CallHome:** none  
**mibFaultCode:** 16535

**moClass:** compute:Blade  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmStFailComputeBladeDiag:serialDebugDisconnect

**Fault Code:**F16535

### Message

[FSM:STAGE:FAILED|RETRY]: Disconnect pre-boot environment agent for server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiag:serialDebugDisconnect)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** serial-debug-disconnect-failed  
**CallHome:** none  
**mibFaultCode:** 16535  
**mibFaultName:** fsmStFailComputeBladeDiagSerialDebugDisconnect  
**moClass:** compute:Blade  
**Type:** fsm

## fsmStFailComputeBladeDiscover:BiosPostCompletion

**Fault Code:**F16520

### Message

[FSM:STAGE:FAILED|RETRY]: Waiting for BIOS POST completion from CIMC on server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:BiosPostCompletion)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** bios-post-completion-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeBladeDiscoverBiosPostCompletion  
**moClass:** compute:Blade  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmStFailComputeBladeDiscover:BladeBootPnuos

**Fault Code:**F16520

### Message

[FSM:STAGE:FAILEDIRETRY]: power server [chassisId]/[slotId] on with pre-boot environment(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootPnuos)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** blade-boot-pnuos-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeBladeDiscoverBladeBootPnuos  
**moClass:** compute:Blade

## fsmStFailComputePhysicalActivateBIOS:PowerOff

**Fault Code:**F17279

### Message

[FSM:STAGE:FAILED|RETRY]: Power off the server(FSM-STAGE:sam:dme:ComputePhysicalActivateBIOS:PowerOff)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** power-off-failed  
**CallHome:** none  
**mibFaultCode:** 17279  
**mibFaultName:** fsmStFailComputePhysicalActivateBIOSPowerOff  
**moClass:** compute:Physical  
**Type:** fsm

## fsmStFailComputePhysicalActivateBIOS:PowerOn

**Fault Code:**F17279

### Message

[FSM:STAGE:FAILEDIRETRY]: power on the server(FSM-STAGE:sam:dme:ComputePhysicalActivateBIOS:PowerOn)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** power-on-failed  
**CallHome:** none  
**mibFaultCode:** 17279  
**mibFaultName:** fsmStFailComputePhysicalActivateBIOSPowerOn  
**moClass:** compute:Physical  
**Type:** fsm

## fsmStFailComputePhysicalActivateBIOS:UpdateTokens

**Fault Code:**F17279

### Message

[FSM:STAGE:FAILEDIRETRY]: updating BIOS tokens(FSM-STAGE:sam:dme:ComputePhysicalActivateBIOS:UpdateTokens)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** update-tokens-failed  
**CallHome:** none  
**mibFaultCode:** 17279  
**mibFaultName:** fsmStFailComputePhysicalActivateBIOSUpdateTokens

## **fsmStFailComputePhysicalAssociate:PnuOSInventory**

**Fault Code:**F16973

### **Message**

[FSM:STAGE:FAILEDIRETRY]: Perform inventory of server(FSM-STAGE:sam:dme:ComputePhysicalAssociate:PnuOSInventory)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** pnuosinventory-failed  
**CallHome:** none  
**mibFaultCode:** 16973  
**mibFaultName:** fsmStFailComputePhysicalAssociatePnuOSInventory  
**moClass:** compute:Physical  
**Type:** fsm

## fsmStFailComputePhysicalAssociate:PnuOSLocalDiskConfig

**Fault Code:**F16973

### Message

[FSM:STAGE:FAILED|RETRY]: Configure local disk on server with service profile [assignedToDn] pre-boot environment(FSM-STAGE:sam:dme:ComputePhysicalAssociate:PnuOSLocalDiskConfig)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

```
Severity: warning
Cause: pnuoslocal-disk-config-failed
CallHome: none
mibFaultCode: 16973
mibFaultName: fsmStFailComputePhysicalAssociatePnuOSLocalDiskConfig
moClass: compute:Physical
Type: fsm
```

## fsmStFailComputePhysicalAssociate:PnuOSPolicy

**Fault Code:**F16973

### Message

[FSM:STAGE:FAILED|RETRY]: Populate pre-boot environment behavior policy(FSM-STAGE:sam:dme:ComputePhysicalAssociate:PnuOSPolicy)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

```
Severity: warning
Cause: pnuospolicy-failed
CallHome: none
mibFaultCode: 16973
mibFaultName: fsmStFailComputePhysicalAssociatePnuOSPolicy
moClass: compute:Physical
Type: fsm
```

## fsmStFailComputePhysicalAssociate:serialDebugPnuOSConnect

**Fault Code:**F16973

### Message

[FSM:STAGE:FAILED|RETRY]: Connect to pre-boot environment agent for association with  
[assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalAssociate:serialDebugPnuOSConnect)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** serial-debug-pnuosconnect-failed  
**CallHome:** none  
**mibFaultCode:** 16973  
**mibFaultName:** fsmStFailComputePhysicalAssociateSerialDebugPnuOSConnect

## fsmStFailComputePhysicalDisassociate:SwUnconfigHostOSLocal

**Fault Code:**F16974

### Message

[FSM:STAGE:FAILED|RETRY]: Unconfigure host OS connectivity from server to primary fabric interconnect(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:SwUnconfigHostOSLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sw-unconfig-hostoslocal-failed  
**CallHome:** none  
**mibFaultCode:** 16974  
**mibFaultName:** fsmStFailComputePhysicalDisassociateSwUnconfigHostOSLocal  
**moClass:** compute:Physical  
**Type:** fsm

## fsmStFailComputePhysicalDisassociate:SwUnconfigHostOSPeer

**Fault Code:**F16974

### Message

[FSM:STAGE:FAILED|RETRY]: Unconfigure host OS connectivity from server to secondary fabric interconnect(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:SwUnconfigHostOSPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

## **fsmStFailComputePhysicalUpdateAdaptor:UpdateRequestPeer**

**Fault Code:**F17043

### **Message**

[FSM:STAGE:FAILEDIRETRY]: sending update request to Adaptor(FSM-STAGE:sam:dme:ComputePhysicalUpdateAdaptor:UpdateRequestPeer)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** update-request-peer-failed  
**CallHome:** none  
**mibFaultCode:** 17043  
**mibFaultName:** fsmStFailComputePhysicalUpdateAdaptorUpdateRequestPeer  
**moClass:** compute:Physical  
**Type:** fsm

## **fsmStFailComputePhysicalUpdateBIOS:Clear**

**Fault Code:**F17278

### **Message**

[FSM:STAGE:FAILEDIRETRY]: clearing pending BIOS image update(FSM-STAGE:sam:dme:ComputePhysicalUpdateBIOS:Clear)

### **Explanation**

None set.

### **Recommended Action**

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### **Fault Details**

**Severity:** warning  
**Cause:** clear-failed  
**CallHome:** none  
**mibFaultCode:** 17278  
**mibFaultName:** fsmStFailComputePhysicalUpdateBIOSClear  
**moClass:** compute:Physical  
**Type:** fsm

### Message

[FSM:STAGE:FAILEDIRETRY]: Waiting for SMBIOS table from CIMC on server [id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:ReadSmbios)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** read-smbios-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeRackUnitDiscoverReadSmbios  
**moClass:** compute:RackUnit  
**Type:** fsm

## fsmStFailComputeRackUnitDiscover:Sanitize

**Fault Code:**F16520

### Message

[FSM:STAGE:FAILED|RETRY]: Checking hardware configuration server  
[id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:Sanitize)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sanitize-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeRackUnitDiscoverSanitize  
**moClass:** compute:RackUnit  
**Type:** fsm

## fsmStFailComputeRackUnitDiscover:SolRedirectDisable

**Fault Code:**F16520

### Message

[FSM:STAGE:FAILED|RETRY]: Disable Sol Redirection on server  
[id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:SolRedirectDisable)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sol-redirect-disable-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeRackUnitDiscoverSolRedirectDisable  
**moClass:** compute:RackUnit  
**Type:** fsm

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## fsmStFailComputeRackUnitDiscover:SolRedirectEnable

**Fault Code:**F16520

### Message

[FSM:STAGE:FAILEDIRETRY]: set up bios token on server [id] for Sol redirect(FSM-STAGE:sam:dme:ComputeRackUnitDiscover:SolRedirectEnable)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** sol-redirect-enable-failed  
**CallHome:** none  
**mibFaultCode:** 16520  
**mibFaultName:** fsmStFailComputeRackUnitDiscoverSolRedirectEnable

## fsmStFailEquipmentChassisRemoveChassis:UnIdentifyPeer

**Fault Code:**F16407

### Message

[FSM:STAGE:FAILED|RETRY]: erasing chassis identity [id] from secondary(FSM-STAGE:sam:dme:EquipmentChassisRemoveChassis:UnIdentifyPeer)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** un-identify-peer-failed  
**CallHome:** none  
**mibFaultCode:** 16407  
**mibFaultName:** fsmStFailEquipmentChassisRemoveChassisUnIdentifyPeer

## fsmStFailLsServerConfigure:WaitForMaintWindow

**Fault Code:**F17214

### Message

[FSM:STAGE:FAILEDIRETRY]: Waiting for maintenance window(FSM-STAGE:sam:dme:LsServerConfigure:WaitForMaintWindow)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** wait-for-maint-window-failed  
**CallHome:** none  
**mibFaultCode:** 17214  
**mibFaultName:** fsmStFailLsServerConfigureWaitForMaintWindow  
**moClass:** ls:Server  
**Type:** fsm

## fsmStFailMgmtBackupBackup:backupLocal

**Fault Code:**F16683

### Message

[FSM:STAGE:FAILEDIRETRY]: internal database backup(FSM-STAGE:sam:dme:MgmtBackupBackup:backupLocal)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** backup-local-failed  
**CallHome:** none  
**mibFaultCode:** 16683  
**mibFaultName:** fsmStFailMgmtBackupBackupBackupLocal  
**moClass:** mgmt:Backup  
**Type:** fsm

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## fsmStFailMgmtBackupBackup:upload

**Fault Code:**F16683

### Message

[FSM:STAGE:FAILED|RETRY]: internal system  
backup(FSM-STAGE:sam:dme:MgmtBackupBackup:upload)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** upload-failed  
**CallHome:** none  
**mibFaultCode:** 16683  
**mibFaultName:** fsmStFailMgmtBackupBackupUpload  
**moClass:** mgmt:Backup  
**Type:** fsm

## fsmStFailMgmtControllerActivateBMC:Activate

**Fault Code:**F16657

### Message

[FSM:STAGE:FAILED|RETRY]: activating backup image of  
CIMC(FSM-STAGE:sam:dme:MgmtControllerActivateBMC:Activate)

### Explanation

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** activate-failed  
**CallHome:** none  
**mibFaultCode:** 16657  
**mibFaultName:** fsmStFailMgmtControllerActivateBMCActivate  
**moClass:** mgmt:Controller  
**Type:** fsm

None set.

### Recommended Action

Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

### Fault Details

**Severity:** warning  
**Cause:** copy-sub-failed

## CHAPTER 4

# Call Home Faults in Cisco UCS Manager

---

This chapter includes the following topics about Call Home faults in Cisco UCS Manager:

- [About Call Home Messages, page 4-1](#)
- [Cisco UCS Faults that Raise Call Home Alerts, page 4-1](#)
- [Cisco UCS Faults and Call Home Priority Levels, page 4-13](#)

## About Call Home Messages

When you configure Call Home to send messages, Cisco UCS Manager executes the appropriate command line interface (CLI) **show** command and attaches the command output to the message.

Cisco UCS delivers Call Home messages in the following formats:

- The short text format—A one- or two-line description of the fault that is suitable for pagers or printed reports.
- Full text format—Fully formatted message with detailed information that is suitable for human reading.
- XML machine readable format—Uses Extensible Markup Language (XML) and Adaptive Messaging Language (AML) XML schema definition (XSD). The AML XSD is published on the Cisco.com website at <http://www.cisco.com/>. The XML format enables communication with the Cisco Systems Technical Assistance Center.

## Cisco UCS Faults that Raise Call Home Alerts

If Smart Call Home is configured in the Cisco UCS instance, every fault listed in this section raises a Smart Call Home event to the Cisco Smart Call Home system.

### Note

All Cisco UCS Manager faults that raise Call Home alerts are documented in [Chapter 2, “Cisco UCS Faults.”](#) The type of Call Home alert is included in the CallHome line of the Fault Details section for each fault.

You can also find additional information about Call Home faults in the Unified Computing System (UCS) section of [Monitoring Details for Cisco SMARTnet Service with Smart Call Home](#).

---

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

This section documents all faults raised by components other than Cisco UCS Manager that result in Call Home alerts and contains the following topics:

- [Faults Raised by a Fabric Interconnect, page 4-2](#)
- [Faults Raised by a Fabric Interconnect, page 4-2](#)
- [Faults Raised by Syslog, page 4-11](#)

## **Faults Raised by a Fabric Interconnect**

This section includes the following topics:

- [Diagnostic Faults Raised by a Fabric Interconnect, page 4-2](#)
- [Environmental Faults Raised by a Fabric Interconnect, page 4-7](#)

## **Diagnostic Faults Raised by a Fabric Interconnect**

The following diagnostic faults cause a fabric interconnect to raise a Call Home alert:

- [TestFabricPort, page 4-2](#)
- [TestForwardingEngine, page 4-3](#)
- [TestForwardingEnginePort, page 4-3](#)
- [TestFrontPort, page 4-4](#)
- [TestInbandPort, page 4-5](#)
- [TestFabricEngine, page 4-5](#)
- [TestSPROM, page 4-5](#)
- [TestOBFL, page 4-6](#)
- [TestLED, page 4-6](#)

### **TestFabricPort**

#### **Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes, if ports\_failed > 25%  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

#### **Explanation**

This fault typically occurs because one or more of the ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

#### **Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** If the failed port or ports are located in an expansion module, remove and re-insert the module.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

- Step 2** Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
  - Step 3** Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
  - Step 4** If the SFP or SFP+ is working, then the module hardware is faulty.
    - a. If the fixed module is affected, consider replacing the fabric interconnect.
    - b. If an expansion module is affected, consider replacing the faulty module.
- Schedule a downtime for the Cisco UCS instance to replace the hardware.
- 

### TestForwardingEngine

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes, if ports\_failed > 25%  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

#### Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the failed port or ports are located in an expansion module, remove and re-insert the module.  
Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.
  - Step 2** Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
  - Step 3** Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
  - Step 4** If the SFP or SFP+ is working, then the module hardware is faulty.
    - a. If the fixed module is affected, consider replacing the fabric interconnect.
    - b. If an expansion module is affected, consider replacing the faulty module.
- Schedule a downtime for the Cisco UCS instance to replace the hardware.
- 

### TestForwardingEnginePort

#### Details

**Severity:** Major  
**Customer Notification:** Yes

**Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)**

**Service Request:** Yes, if ports\_failed > 25%  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

**Explanation**

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. the network connectivity to the devices connected on the failed ports is affected.

**Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** If the failed port or ports are located in an expansion module, remove and re-insert the module. Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.
- Step 2** Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
- Step 3** Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
- Step 4** If the SFP or SFP+ is working, then the module hardware is faulty.
- a. If the fixed module is affected, consider replacing the fabric interconnect.
  - b. If an expansion module is affected, consider replacing the faulty module.
- Schedule a downtime for the Cisco UCS instance to replace the hardware.
- 

**TestFrontPort****Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes, if ports\_failed > 25%  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

**Explanation**

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

**Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect.
- Step 2** If the failed port or ports are located in an expansion module, do the following:
- a. Remove and re-insert the module.
- Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

- b. If the problem persists and if all of the ports are required to be functional on the fabric interconnect, schedule a downtime and replace the expansion module.

**Step 3** If the failed port or ports are located in the fixed module and all ports are required to be functional on the fabric interconnect, schedule a downtime and replace the fabric interconnect.

---

### **TestInbandPort**

#### **Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

#### **Explanation**

This fault typically occurs because the inband connectivity to the fabric interconnect is experiencing a failure. The fabric interconnect uses inband connectivity for the control plane protocols to connect to peers such as servers, LAN switches, and SAN switches. Examples of these control plane protocols include DCX, STP, LACP, and FSPF. If a fabric interconnect cannot run the appropriate control plane protocols, it can no longer function and the Cisco UCS Manager shuts down all of the ports on the fabric interconnect to avoid topology problems.

#### **Recommended Action**

If you see this fault, schedule a downtime and replace the fabric interconnect.

### **TestFabricEngine**

#### **Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

#### **Explanation**

This fault typically occurs because the fabric ASIC has reported a major failure. Connectivity among all of the ports depends upon the fabric ASIC. Therefore, the Cisco UCS Manager shuts down all ports on the fabric interconnect.

#### **Recommended Action**

If you see this fault, schedule a downtime and replace the fabric interconnect.

### **TestSPROM**

#### **Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

This fault typically occurs when the Cisco UCS Manager cannot bring the affected module online because the module type is unidentified. For the expansion modules, the Cisco UCS Manager determines the module type from information stored in the module SPROM. If you see this error, the checksum calculation for the SPROM content has most likely failed.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:
  - Step 2** Remove and re-insert the module to ensure that all pins are in good contact with the backplane.  
Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.
  - Step 3** If the problem persists after multiple re-insertions, schedule a downtime and replace the faulty module.
- 

## TestOBFL

### Details

**Severity:** Minor  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

### Explanation

This fault typically occurs because the onboard fault logging (OBFL) flash has failed. The Cisco UCS Manager logs hardware failure messages to this flash component. That logging function is lost. However, other logs, such as the syslog, are not affected and can continue to work normally.

This fault does not affect the normal operation of the fabric interconnect. The fault can only occur on the fixed module. It cannot occur on the expansion modules.

### Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support command** and contact Cisco Technical Support.

## TestLED

### Details

**Severity:** Minor  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show diagnostic result module all  
**Call Home Support:** 3.0, 3.1

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault typically occurs when the Cisco UCS Manager cannot access the LED controls on a module. However, because the LED control uses the same transport mechanism that controls other key components on a module, this fault can indicate other failures. This fault can be caused by a bent pin on the module or fabric interconnect.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

### Recommended Action

If you see this fault, take the following actions:

- 
- |               |  |
|---------------|--|
| <b>Step 1</b> | Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:   |
| <b>Step 2</b> | Remove and re-insert the module to ensure that all pins are in good contact with the backplane.<br>Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules. |
| <b>Step 3</b> | If this failure continues after re-insertion, insert this module into a known good fabric interconnect to determine whether the same failure occurs.   |
| <b>Step 4</b> | If the problem persists, schedule a downtime and replace the faulty module.  |
- 

## Environmental Faults Raised by a Fabric Interconnect

The following environmental faults cause a fabric interconnect to raise a Call Home alert:

- [Temperature Alarm, page 4-7](#)
- [PowerSupplyFailure, page 4-8](#)
- [TEMPERATURE\\_ALARM --- Sensor, page 4-9](#)
- [TestFAN -- fan speed speed out of range >= expected. speed rpm, page 4-10](#)
- [Multiple fans missing or failed, page 4-10](#)
- [One fan missing or failed, page 4-11](#)

## Temperature Alarm

### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show environment  
**Call Home Support:** 3.0, 3.1

### Explanation

This fault typically occurs because the temperature sensor reports that the affected chassis has exceeded the major or minor threshold value and is at a dangerously high temperature. If the operating temperature is not reduced, the system shuts down the affected chassis to avoid causing permanent damage. The chassis is powered back on after the temperature returns to a reasonable level.

Each chassis needs at least seven functional fans to maintain operating temperature.

**Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)****Recommended Action**

If you see this fault, take the following actions:

- 
- Step 1** If the fault report includes **fan\_failure\_found**, do the following:
- a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, check the status of the affected fan to determine whether the temperature-related alarm is due to the failure of a fan.
  - b. Ensure that a minimum of seven fans are installed in the chassis and are functioning properly.
  - c. Check the fan-related syslog messages to see the exact reason for the failure. For example, the fan may have become non-operational.
  - d. Replace the faulty fan to resolve the issue.
- Step 2** If the fault report includes **temp\_current >= maj\_threshold** or **temp\_current =< min\_threshold**, do the following:
- a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, view the acceptable temperature and voltage parameters and determine how much of the outlet or inlet temperature has reached or exceeded over the major or minor threshold value.
  - b. Verify the following to ensure that the site where the chassis is installed meets the site guidelines:
    - The area is dry, clean, well-ventilated and air-conditioned.
    - The air conditioner is working correctly and maintains an ambient temperature of 0 to 40 degrees C.
    - The chassis is installed in an open rack whenever possible. If the installation on an enclosed rack is unavoidable, ensure that the rack has adequate ventilation.
    - The ambient airflow is unblocked to ensure normal operation. If the airflow is blocked or restricted, or if the intake air is too warm, an over temperature condition can occur.
    - The clearance around the ventilation openings of the chassis are at least 6 inches (15.24 cm).
    - The chassis is not in an overly congested rack or is not directly next to another equipment rack. Heat exhaust from other equipment can enter the inlet air vents and cause an over temperature condition.
    - The equipment near the bottom of a rack is not generating excessive heat that is drawn upward and into the intake ports of the chassis. The warm air can cause an over temperature condition.
    - The cables from other equipment does not obstruct the airflow through the chassis or impair access to the power supplies or the cards. Route the cables away from any field-replaceable components to avoid disconnecting cables unnecessarily for equipment maintenance or upgrades.
- 

**PowerSupplyFailure****Details**

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show environment  
**Call Home Support:** 3.0, 3.1

## *Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

### Explanation

This fault typically occurs because a failure was recorded in the affected power supply unit and the affected component is working with only one power supply unit.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** Check the power supply unit that has the problem, as follow:
- In the Cisco UCS Manager CLI, execute the **show environment power** command
  - In the Cisco UCS Manager GUI, view the PSUs tab of the Chassis node on the Equipment tab.
- Step 2** Verify that the power cord is properly connected to the power supply and to the power source.
- Step 3** Ensure that the fabric interconnect is supplied with 220V (this is the only supported power supply configuration).
- Step 4** Ensure that the power supply is properly inserted and plugged in.
- Step 5** If problem persists, remove and re-insert the power-supply unit.
- Step 6** If the power supply light is still not green and the status continues to show fail or shutdown, replace the faulty power supply unit.
- 

## TEMPERATURE\_ALARM --- Sensor

### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** Yes  
**Cisco UCS Manager CLI:** show environment  
**Call Home Support:** 3.0, 3.1

### Explanation

This fault typically occurs because the Cisco UCS Manager cannot access a temperature sensor. As a result, the Cisco UCS Manager cannot monitor or regulate the temperature for the affected component. The affected temperature sensor could be for a chassis, power supply, or module.

### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** View the logs to determine the set of sensors that has failed, as follow:
- In the Cisco UCS Manager CLI, execute the **show logging** command
  - In the Cisco UCS Manager GUI, view the logs under the Faults, Events, and Audit Log node on the Admin tab.
- Step 2** If the failed sensors are on an expansion module or a power supply, do the following:
- a. Remove and re-insert the power supply or module.  
Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

- b. If the failure continues to persist after multiple re-insertions, replace the faulty power supply unit or the module.

- Step 3** If the failed sensors are on the fixed module, replace the fabric interconnect as it can no longer regulate and monitor the chassis temperature.
- 

### TestFAN -- fan speed *speed* out of range >= expected. *speed* rpm

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show environment  
**Call Home Support:** 3.0, 3.1

#### Explanation

This fault typically occurs because the Cisco UCS Manager has detected a fan that is running at a speed that is too slow or too fast. A malfunctioning fan can affect the operating temperature of the chassis.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the fan is running below the expected speed, ensure that the fan blades are not blocked.
  - Step 2** If the fan is running above the expected speed, remove and re-insert the fan.
- 

### Multiple fans missing or failed

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show environment

#### Explanation

This fault typically occurs because the Cisco UCS Manager has detected multiple fan failures. The malfunctioning fans can result in high operating temperatures, affect performance, and cause the Cisco UCS Manager to shut down the affected component.

#### Recommended Action

If you see this fault, take the following actions:

- 
- Step 1** If the chassis fans have failed, do the following:
    - a. Check the fan status.
    - b. Ensure that at least seven fans are installed and functioning properly.
    - c. Check the fan-related syslog messages to see the exact reason for the failure. The fans may have become non-operational.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

- d. Replace the faulty fans to resolve the issue.
- Step 2** If the power supply fans have failed and the power supply is operational, do the following:
- a. Check the fan status.
  - b. Remove and re-insert the power supply and verify whether the fan is operational.
  - c. If the problem persists, replace the power-supply.
- 

### **One fan missing or failed**

#### **Details**

**Severity:** Minor  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show environment  
**Call Home Support:** 3.0, 3.1

#### **Explanation**

This fault typically occurs because the Cisco UCS Manager has determined that a single fan is missing or has failed. A single missing or malfunctioning fan does not affect performance. A minimum of seven fans are required for a chassis to be operational.

#### **Recommended Action**

If you see this fault, take the following actions:

---

- Step 1** If the chassis fans have failed, do the following:
- a. Check the fan status.
  - b. Ensure that at least seven fans are installed and functioning properly.
  - c. Check the fan-related syslog messages to see the exact reason for the failure. The fan may have become non-operational.
  - d. Replace the faulty fan to resolve the issue.
- Step 2** If the power supply fans have failed and the power supply is operational, do the following:
- a. Check the fan status.
  - b. Remove and re-insert the power supply and verify whether the fan is operational.
  - c. If the problem persists, replace the power-supply.
- 

## **Faults Raised by Syslog**

The following faults cause syslog to raise a Call Home alert:

- [No license installed for feature, is on grace license, will expire in DD HH, page 4-12](#)
- [License for feature, will expire in HH MM, page 4-12](#)
- [License has expired for feature, page 4-12](#)
- [License file is missing for feature, page 4-13](#)

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

### No license installed for feature, is on grace license, will expire in DD HH

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show logging  
**Call Home Support:** 3.0, 3.1

#### Explanation

The evaluation license installed for the affected feature is running under a grace period. The grace period expires on the date shown in the log at which time the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

The impact on performance depends upon whether the affected feature is implemented.

#### Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at <http://www.cisco.com/en/US/ordering/index.shtml>

### License for feature, will expire in HH MM

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show logging  
**Call Home Support:** 3.0, 3.1

#### Explanation

The evaluation license installed for the affected feature expires within the number of hours and minutes listed in the alert. When that period expires, the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

#### Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at <http://www.cisco.com/en/US/ordering/index.shtml>

### License has expired for feature

#### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show logging  
**Call Home Support:** 3.0, 3.1

## Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)

### Explanation

The evaluation license installed for the affected feature has expired, and the Cisco UCS Manager has disabled the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

### Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at <http://www.cisco.com/en/US/ordering/index.shtml>

## License file is missing for feature

### Details

**Severity:** Major  
**Customer Notification:** Yes  
**Service Request:** No  
**Cisco UCS Manager CLI:** show logging  
**Call Home Support:** 3.0, 3.1

### Explanation

The previously installed license for the affected feature is missing from the fabric interconnect configuraton storage, and the Cisco UCS Manager has disabled the feature. This issue can occur in rare circumstances such as flash corruption. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

### Recommended Action

If you see this fault, re-install the license from the license backup.

# Cisco UCS Faults and Call Home Priority Levels

Because Call Home is present across several Cisco product lines, Call Home has developed its own standardized priority levels. The following table describes how the underlying Cisco UCS fault levels map to the Call Home priority levels.

**Table 4-1 Mapping of Cisco UCS Faults and Call Home Priority Levels**

| UCS Fault    | Call Home Priority | SCH Priority |
|--------------|--------------------|--------------|
| —            | (9) Catastrophic   | —            |
| —            | (8) Disaster       | —            |
| —            | (7) Fatal          | —            |
| (6) Critical | (6) Critical       | Major        |
| (5) Major    | (5) Major          | Major        |
| (4) Minor    | (4) Minor          | Minor        |
| (3) Warning  | (3) Warning        | Minor        |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Table 4-1 Mapping of Cisco UCS Faults and Call Home Priority Levels**

| <b>UCS Fault</b> | <b>Call Home Priority</b> | <b>SCH Priority</b> |
|------------------|---------------------------|---------------------|
| —                | (2) Notification          | Minor               |
| (1) Info         | (1) Normal                | Minor               |

When Call Home information is communicated in an e-mail format, the priority levels and faults appear in the following places.

- The SCH priority is communicated in the e-mail subject line.
- The Call Home priority is communicated as a “Severity Level:” header to the e-mail message.
- The UCS fault information is attached in the body of the e-mail.
- The UCS fault severity is identified within the attachment as “severity=”.

## CHAPTER 5

# Troubleshooting Transient Faults

Transient faults can occur during initial set up and discovery or when a server or virtual machine starts up. You can typically ignore these transient faults, as Cisco UCS Manager clears them automatically.

This chapter includes the following sections:

- [Initial Setup and Discovery Faults, page 5-1](#)
- [Virtual Machine Startup Faults, page 5-5](#)

## Initial Setup and Discovery Faults

[Table 5-1](#) describes the transient faults that you may see during the initial setup and discovery process. The Cisco UCS Manager clears these faults. If you see them during the initial setup or discovery process, you can safely ignore these faults.

**Table 5-1** *Transient Faults that Occur during Initial Setup and Discovery Process*

| Fault Code | Fault Text  | Description   |
|------------|---|---|
| F16581     | [FSM:STAGE:RETRY:]: user configuration to secondary (FSM-STAGE:sam:dme:AaaUserEpUpdateUserEp:SetUserPeer)   | The FSM could not send the user configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.                   |
| F16745     | [FSM:STAGE:RETRY:]: QoS Classification Definition classification configuration on secondary (FSM-STAGE:sam:dme:QosclassDefinitionConfigGlobalQoS:SetPeer) | The FSM could not send the quality of the service configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup. |
| F16725     | [FSM:STAGE:RETRY:]: VM profile configuration on external VM manager (FSM-STAGE:sam:dme:VnicProfileSetConfigVmm:SetLocal)                                  | The FSM could not send the VM profile configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.             |
| F16580     | [FSM:STAGE:RETRY:]: realm configuration to secondary (FSM-STAGE:sam:dme:AaaRealmUpdateRealm:SetRealmPeer)   | The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.               |

**Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)**

**Table 5-1 Transient Faults that Occur during Initial Setup and Discovery (continued)Process**

| <b>Fault Code</b> | <b>Fault Text</b>   | <b>Description (continued)</b>   |
|-------------------|---|--|
| F16724            | [FSM:STAGE:RETRY:]: external VM manager configuration on local fabric (FSM-STAGE:sam:dme:ExtvmmEpConfig:SetLocal)               | The FSM could not send the VM manager configuration to the primary fabric interconnect during the initial cluster configuration or the setup.  |
| F16579            | [FSM:STAGE:RETRY:]: external aaa server configuration to secondary (FSM-STAGE:sam:dme:AaaEpUpdateEp:SetEpPeer)                  | The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.  |
| F16749            | [FSM:STAGE:RETRY:]: Uplink eth port configuration on B (FSM-STAGE:sam:dme:SwEthLanBorderDeploy:UpdateConnectivity)              | The FSM could not send the eth-uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.   |
| F16749            | [FSM:STAGE:RETRY:]: internal network configuration on B (FSM-STAGE:sam:dme:SwAccessDomainDeploy:UpdateConnectivity)             | The FSM could not send the internal network configuration to the fabric interconnects during the initial cluster configuration or the setup.   |
| F16749            | [FSM:STAGE:RETRY:]: Uplink fc port configuration on B (FSM-STAGE:sam:dme:SwFcSanBorderDeploy:UpdateConnectivity)                | The FSM could not send the fibre channel uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.   |
| F16680            | [FSM:STAGE:RETRY:]: Enable virtual interface on local fabric interconnect (FSM-STAGE:sam:dme:MgmtIfEnableVip:Local)             | The FSM could not send the virtual interface configuration to the fabric interconnects during the initial cluster configuration or the setup.  |
| F16579            | [FSM:STAGE:RETRY:]: keyring configuration on secondary (FSM-STAGE:sam:dme:PkiEpUpdateEp:SetKeyRingPeer)                         | The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.  |
| F16539            | [FSM:STAGE:RETRY:]: Fabric interconnect mode configuration to primary (FSM-STAGE:sam:dme:FabricLanCloudSwitchMode:SwConfigPeer) | The FSM could not send the end-host mode configuration on to the primary fabric interconnect during the initial cluster configuration or the setup.  |
| F0429             | Fabric Interconnect A, HA functionality not ready   | The cluster configuration cannot be completed until the chassis discovery is completed.  |
| F0400             | Chassis 1 connectivity configuration: un-acknowledged   | The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. The Cisco UCS Manager reacknowledges the chassis to activate the other links. |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Table 5-1** *Transient Faults that Occur during Initial Setup and Discovery (continued)Process*

| <b>Fault Code</b> | <b>Fault Text</b>  | <b>Description (continued)</b>   |
|-------------------|--|--|
| F0401             | IOM 1/2 (B) current connectivity does not match discovery policy: unsupported-connectivity         | The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links.<br><br>The Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link.   |
| F0440             | Chassis discovery policy conflict: Link IOM 1/2/2 to fabric interconnect B:1/1 not configured      | The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.<br><br>The Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link. |
| F0332             | AssociatePnuOSLocalDiskConfig fails with Service-Unavailable                                       | During discovery, the server association failed due to an error when configuring the local disk controller.<br><br>The associated remote invocation error code is 4106.  |
| F0277             | ether port 1 on fabric interconnect B oper state: link-up, reason: FEX not configured              | The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.   |
| F0276             | ether port 4 on fabric interconnect B oper state: link-down, reason: Link failure or not-connected | One or more of the links on the chassis flapped during the initial discovery. This fault is generated when the link is down during the flapping.   |
| F0206             | Adapter 1/2/1 is unreachable   | During discovery, the adapter information cannot be accessed from the server. This fault clears as soon as the information is available.   |
| F0283             | VIF 1 / 2 B-42/44 down, reason: Bound Physical Interface Down                                      | The internal VIF that the Cisco UCS Manager uses during discovery failed.  |

**Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)**

**Table 5-1 Transient Faults that Occur during Initial Setup and Discovery (continued)Process**

| Fault Code | Fault Text   | Description (continued)  |
|------------|--|--|
| F0367      | No link between IOM port 1/1/2 and fabric interconnect A:1/2   | The ethernet server ports flapped on the fabric interconnect during the initial discovery, because the discovery policy was configured for more than one link.<br><br>The Cisco UCS Manager clears this fault when the initial discovery succeeds with one link and the other links can be marked as active. |
| F0399      | Current connectivity for chassis 1 does not match discovery policy: unsupported-connectivity   | The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.   |
| F16520     | [FSM:STAGE:RETRY:]: Identify pre-boot environment agent on server 1/2 (FSM-STAGE:sam:dme:ComputeBlade Discover:PnuOSIdent)   | The FSM failed to identify the pre-boot environment on the server during discovery.  |
| F77960     | [FSM:STAGE:REMOTE-ERROR]: Result: end-point-unavailable Code: unspecified Message: Waiting for BIOS POST Completion information from IBMC (sam:dme:ComputeBladeDiscover: BiosPostCompletion)                               | The FSM did not receive a response from the server during discovery and is waiting for the BIOS POST completion information.   |
| F0320      | Server 1/1 (service profile: ) has an invalid FRU: mismatch-identity-unestablishable   | The Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.   |
| F77959     | [FSM:STAGE:REMOTE-ERROR]: Result: unidentified-fail Code: ERR-0505-IBMC-fru-retrieval-error Message: Could not get Fru from 7f060101, dn=fabric/server/chassis-1/slot-1 (sam:dme:FabricComputeSlotEpIdentify:ExecuteLocal) | The Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.   |
| F16406     | [FSM:STAGE:RETRY:]: triggering chassis discovery via IOM 1/2 (right) (FSM-STAGE:sam:dme:EquipmentIOCardFeConn:DiscoverChassis)   | In a cluster configuration, after the Cisco UCS Manager discovers the chassis through the I/O module connected to the primary fabric interconnect, it raises discovery through the I/O module connected to the secondary fabric interconnect.  |

## Virtual Machine Startup Faults

When you power on a virtual machine on a server that has network adaptors connected to a distributed virtual switch through a port profile, the Events tab of the VMware vCenter may display the following event:

```
Virtual machine powered On with vNICs connected to dvPorts that have a port level configuration, which might be different from the dvPort group configuration.
```

If you see this event, you can safely ignore it.

## **PART 2**

### **Cisco UCS Manager SEL Messages**

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## CHAPTER 6

# Introduction to System Event Log Messages

---

This chapter provides general information about System Event Log Messages. The following sections are included:

- [Information about System Event Log Messages, page 6-1](#)
- [SEL File, page 6-1](#)
- [SEL Policy, page 6-2](#)

## Information about System Event Log Messages

The system event log (SEL) resides on the CIMC in NVRAM. It records most server-related events, such as over- and under-voltage, temperature events, fan events, events from the BIOS, and so on. It also records platform errors such as memory errors, CPU errors, and so on.

The SEL is mainly used for troubleshooting purposes. UCSM uses SEL records to provide mechanisms for proactive health monitoring of the system (for example, faults and error statistics).

**Tip**

---

For more information about the SEL, including how to view the SEL for each server and configure the SEL policy, see the Cisco UCS configuration guides accessible through the [Cisco UCS B-Series Servers Documentation Roadmap](#).

---

## SEL File

The SEL file is approximately 40 KB in size, and no further events are recorded when it is full. It must be cleared before additional events can be recorded.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## SEL Policy

The SEL policy can be configured to backup the SEL to a remote server, and, optionally to clear the SEL after a backup operation occurs. A back up operation can be triggered based upon the following actions defined by the user as a part of SEL backup policy.

- On SEL log full
- On change of server association
- On expiration of timer interval, and so on.

User can also manually backup or clear the SEL.

## CHAPTER 7

# BIOS Messages

---

This chapter provides information about the BIOS messages that are present in the Cisco version of the BIOS:

- [POST Error Messages and Handling, page 7-1](#)
- [BIOS Message Severities, page 7-1](#)
- [BIOS Message Format, page 7-2](#)
- [BIOS Messages and Codes, page 7-2](#)
- [Cisco BIOS Messages and Codes, page 7-6](#)

## POST Error Messages and Handling

The BIOS outputs the current boot progress codes to the System Event Log (SEL) and to the UCS Manager. Progress codes are 32 bit quantities plus optional data. The 32 bits include class, subclass, and operation information. The class and subclass fields point to the type of hardware that is being initialized. The operation field represents the specific initialization activity.

Based on the data bit availability to display progress codes, a progress code can be customized to fit the data width. The higher the data bit, the higher the granularity of information that can be sent on the progress port. The progress codes can be reported by the system BIOS or optional ROMs.

## BIOS Message Severities

BIOS messages have these severities:

- **Minor**—The system continues booting in a degraded state. The user might want to replace the unit. The POST Error Pause option setting in the BIOS setup does not have any effect on this error.
- **Major**—The POST Error Pause option setting in the BIOS setup determines whether the error manager pauses the system to allow the user to take immediate corrective action or the system continues the booting process.

---

**Note** For the **0048 Password check failed** message, the system halts, and after the next reset or reboot, displays the error code on the screen.

---

**Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)**

- **Fatal**—The system halts during post at a blank screen with the text “Unrecoverable fatal error found. System will not boot until the error is resolved,” and Press <F2> to enter setup. The POST Error Pause option setting in the BIOS setup does not have any effect with this class of error.

When the F2 key is pressed on the keyboard, the error message is displayed on the screen, and an error is logged to the SEL with the error code. The system cannot boot unless the error is resolved. The faulty part must be replaced, and the system must be restarted.

## BIOS Message Format

Table 7-1 describes the format used in BIOS messages.

**Table 7-1** Error Message Format

| Generator ID       | Sensor Type Code                  | Sensor number                     | Type code                       | Event Data1                           | Event Data2                          | Event Data3                           |
|--------------------|-----------------------------------|-----------------------------------|---------------------------------|---------------------------------------|--------------------------------------|---------------------------------------|
| 33h<br>(BIOS POST) | 0Fh<br>(System Firmware Progress) | 0Fh<br>(System Firmware Progress) | 6Fh<br>(Sensor Specific Offset) | A0h<br>(OEM Codes in Data2 and Data3) | xxh<br>(Low Byte of POST Error Code) | xxh<br>(High Byte of POST Error Code) |

## BIOS Messages and Codes

Table 7-2 lists messages that are from the baseline Intel BIOS and are present in the Cisco version of the BIOS.

**Table 7-2** List of BIOS messages and codes

| Error Code | Severity | Error Message   | Possible Needed Response         |
|------------|----------|---|----------------------------------|
| 9687       | Fatal    | DXE core component encountered a illegal software state error.              | Replace faulty part and restart. |
| 8565       | Major    | DIMM_C2 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_C2.                 |
| 8567       | Major    | DIMM_D2 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_D2.                 |
| 85A2       | Major    | DIMM_B1 uncorrectable ECC error encountered.                                | Replace DIMM_B1.                 |
| 85AB       | Major    | DIMM_F2 uncorrectable ECC error encountered.                                | Replace DIMM_F2.                 |
| 9000       | Major    | Unspecified processor component has encountered a non-specific error.       | Restart. If failure, replace.    |
| 0xB6A3     | Major    | DXE boot services driver unrecognized.                                      | Restart. If failure, replace.    |
| 8604       | Minor    | Chipset reclaim of noncritical variables complete.                          | Restart. If failure, replace.    |
| 9223       | Minor    | Keyboard component was not detected.  | Restart. If failure, replace.    |
| 9266       | Minor    | Local console component encountered a controller error.                     | Restart. If failure, replace.    |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Table 7-2**      **List of BIOS messages and codes (continued)**

| <b>Error Code</b> | <b>Severity</b> | <b>Error Message</b>  | <b>Possible Needed Response</b>  |
|-------------------|-----------------|---|--|
| 9286              | Minor           | Remote console component encountered a controller error.                        | Restart. If failure, replace.  |
| 94C6              | Minor           | LPC component encountered a controller error.                                   | Restart. If failure, replace.  |
| 95A7              | Minor           | PCI component encountered a read error.   | Restart. If failure, replace.  |
| 9609              | Minor           | Unspecified software component encountered a start error.                       | Restart. If failure, replace.  |
| 0xA028            | Minor           | Processor component encountered a high-voltage error.                           | Restart. If failure, replace.  |
| 0xA501            | Minor           | ATA/ATPI ATA SMART is disabled.   | Enable.  |
| 0192              | Fatal           | Processor 0x cache size mismatch detected.                                      | Replace faulty part and restart.   |
| 0194              | Fatal           | Processor 0x family mismatch detected.  | Replace faulty part and restart.   |
| 0196              | Fatal           | Processor 0x model mismatch.  | Replace faulty part and restart.   |
| 0197              | Fatal           | Processor 0x speeds mismatched.   | Replace faulty part and restart.   |
| 0198              | Fatal           | Processor 0x family is not supported.   | Replace faulty part and restart.   |
| 9667              | Fatal           | PEI module component encountered an illegal software state error.               | Replace faulty part and restart.   |
| 96A7              | Fatal           | DXE boot services driver component encountered an illegal software state error. | Replace faulty part and restart.   |
| 96E7              | Fatal           | SMM driver component encountered an illegal software state error.               | Replace faulty part and restart.   |
| 0xA421            | Fatal           | PCI component encountered a SERR error.   | Replace faulty part and restart.   |
| 0xA5A1            | Fatal           | PCI Express component encountered a SERR error.                                 | Replace faulty part and restart.   |
| 0012              | Major           | CMOS date / time not set.   | Set the time and date.   |
| 0048              | Major           | Password check failed.  | Verify user password. Restart. If failure, apply admin password. Replace if necessary. |
| 0113              | Major           | Fixed media SAS RAID firmware cannot run properly.                              | Reflash firmware. Restart. If failure, replace.  |
| 0140              | Major           | PCI component encountered a PERR error.   | Restart. If failure, replace.  |
| 0141              | Major           | PCI resource conflict.  | Restart. If failure, replace.  |
| 0146              | Major           | PCI out of resources error.   | Review resource allocation. Remove unneeded resources. Restart. If failure, replace.   |
| 0195              | Major           | Processor 0x Intel QPI speed mismatch.  | Restart. If failure, replace.  |
| 019F              | Major           | Processor and chipset stepping configuration is unsupported.                    | Restart. If failure, replace.  |
| 5220              | Major           | CMOS/NVRAM configuration cleared  | Reset configurations. Restart. If failure, replace.                                    |

**Table 7-2** List of BIOS messages and codes (continued)

| <b>Error Code</b> | <b>Severity</b> | <b>Error Message</b>  | <b>Possible Needed Response</b>                |
|-------------------|-----------------|---|--|
| 5221              | Major           | Passwords cleared by jumper.  | Reset passwords. Restart. If failure, replace. |
| 5224              | Major           | Password clear jumper is set.   | Restart. If failure, replace.                  |
| 8160              | Major           | Processor 01 unable to apply microcode update.                              | Restart. If failure, replace.                  |
| 8161              | Major           | Processor 02 unable to apply microcode update.                              | Restart. If failure, replace.                  |
| 8190              | Major           | Watchdog timer failed on last boot.   | Restart. If failure, replace.                  |
| 8198              | Major           | OS boot watchdog timer failure.   | Reset timer. If failure, replace.              |
| 8300              | Major           | Baseboard management controller failed self test.                           | Restart. If failure, replace.                  |
| 84F2              | Major           | Baseboard management controller failed to respond.                          | Restart. If failure, replace.                  |
| 84F3              | Major           | Baseboard management controller in update mode.                             | Complete update, then restart.                 |
| 84F4              | Major           | Sensor data record empty.   | Review files. If none, restart.                |
| 8500              | Major           | Memory component could not be configured in the selected RAS mode.          | Restart. If failure, replace.                  |
| 8501              | Major           | DIMM population error.  | Restart. If failure, replace.                  |
| 8502              | Major           | CLTT configuration failure error.   | Restart. If failure, replace.                  |
| 8520              | Major           | DIMM_A1 failed self test (BIST).  | Replace DIMM_A1.                               |
| 8521              | Major           | DIMM_A2 failed self test (BIST).  | Replace DIMM_A2.                               |
| 8522              | Major           | DIMM_B1 failed self test (BIST).  | Replace DIMM_B1.                               |
| 8523              | Major           | DIMM_B2 failed self test (BIST).  | Replace DIMM_B2.                               |
| 8524              | Major           | DIMM_C1 failed self test (BIST).  | Replace DIMM_C1.                               |
| 8525              | Major           | DIMM_C2 failed self test (BIST).  | Replace DIMM_C2.                               |
| 8526              | Major           | DIMM_D1 failed self test (BIST).  | Replace DIMM_D1.                               |
| 8527              | Major           | DIMM_D2 failed self test (BIST).  | Replace DIMM_D2.                               |
| 8528              | Major           | DIMM_E1 failed self test (BIST).  | Replace DIMM_E1                                |
| 8562              | Major           | DIMM_B1 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_B1                                |
| 8563              | Major           | DIMM_B2 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_B2.                               |
| 8564              | Major           | DIMM_C1 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_C1.                               |
| 8566              | Major           | DIMM_D1 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_D1.                               |
| 8568              | Major           | DIMM_E1 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_E1.                               |
| 8569              | Major           | DIMM_E2 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_E2.                               |

**Table 7-2**      **List of BIOS messages and codes (continued)**

| <b>Error Code</b> | <b>Severity</b> | <b>Error Message</b>  | <b>Possible Needed Response</b>   |
|-------------------|-----------------|---|---|
| 856A              | Major           | DIMM_F1 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_F1.  |
| 856B              | Major           | DIMM_F2 component encountered a Serial Presence Detection (SPD) fail error. | Replace DIMM_F2.  |
| 85A0              | Major           | DIMM_A1 uncorrectable ECC error encountered.                                | Replace DIMM_A1.  |
| 85A1              | Major           | DIMM_A2 uncorrectable ECC error encountered.                                | Replace DIMM_A2.  |
| 85A3              | Major           | DIMM_B2 uncorrectable ECC error encountered.                                | Replace DIMM_B2.  |
| 85A4              | Major           | DIMM_C1 uncorrectable ECC error encountered.                                | Replace DIMM_C1.  |
| 85A5              | Major           | DIMM_C2 uncorrectable ECC error encountered.                                | Replace DIMM_C2.  |
| 85A6              | Major           | DIMM_D1 uncorrectable ECC error encountered.                                | Replace DIMM_D1.  |
| 85A7              | Major           | DIMM_D2 uncorrectable ECC error encountered.                                | Replace DIMM_D2.  |
| 85A8              | Major           | DIMM_E1 uncorrectable ECC error encountered.                                | Replace DIMM_E1.  |
| 85A9              | Major           | DIMM_E2 uncorrectable ECC error encountered.                                | Replace DIMM_E2.  |
| 85AA              | Major           | DIMM_F1 uncorrectable ECC error encountered.                                | Replace DIMM_F1.  |
| 92A3              | Major           | Serial port component was not detected.                                     | Restart if component exists. If failure, replace. If no component, add. |
| 92A9              | Major           | Serial port component encountered a resource conflict error.                | Restart. If failure, replace.   |
| 94C9              | Major           | LPC component encountered a resource conflict error.                        | Restart. If failure, replace.   |
| 0xA022            | Major           | Processor component encountered a mismatch error.                           | Restart. If failure, replace.   |
| 0xA5A4            | Major           | PCI Express IBIST error.  | Restart. If failure, replace.   |
| 0108              | Minor           | Keyboard component encountered a locked error.                              | Unlock the keyboard.  |
| 0109              | Minor           | Keyboard component encountered a stuck key error.                           | Restart. If failure, replace.   |
| 0193              | Minor           | Processor 0x stepping mismatch.   | Restart. If failure, replace.   |
| 8180              | Minor           | Processor 0x microcode update not found.                                    | Restart. If failure, replace.   |
| 84FF              | Minor           | System event log full.  | Export event log and delete files.                                      |
| 9226              | Minor           | Keyboard component encountered a controller error.                          | Restart. If failure, replace.   |
| 9243              | Minor           | Mouse component was not detected.   | Restart.  |
| 9246              | Minor           | Mouse component encountered a controller error.                             | Restart.  |
| 9268              | Minor           | Local uonsole component encountered an output error.                        | Restart.  |
| 9269              | Minor           | Local uonsole component encountered a resource conflict error.              | Restart.  |
| 9287              | Minor           | Remote uonsole component encountered an input error.                        | Restart.  |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

**Table 7-2** List of BIOS messages and codes (continued)

| Error Code | Severity | Error Message   | Possible Needed Response  |
|------------|----------|---|---|
| 9288       | Minor    | Remote uonsole component encountered an output error.                               | Restart.  |
| 92C6       | Minor    | Serial port controller error.   | Restart. If failure, replace.   |
| 92C7       | Minor    | Serial port component encountered an input error.                                   | Restart. If failure, replace.   |
| 92C8       | Minor    | Serial port component encountered an output error.                                  | Restart. If failure, replace.   |
| 9506       | Minor    | ATA/ATPI component encountered a controller error.                                  | Restart. If failure, replace.   |
| 95A6       | Minor    | PCI component encountered a controller error.                                       | Restart. If failure, replace.   |
| 95A8       | Minor    | PCI component encountered a write error.  | Restart. If failure, replace.   |
| 9641       | Minor    | PEI Core component encountered a load error.  | Restart. If failure, replace.   |
| 96AB       | Minor    | DXE boot services driver component encountered invalid configuration.               | Restart. If failure, replace.   |
| 0xA000     | Minor    | TPM device not detected.  | Add TPM device, otherwise replace.  |
| 0xA001     | Minor    | TPM device missing or not responding.   | Add TPM device if needed, otherwise replace.  |
| 0xA002     | Minor    | TPM device failure.   | Replace TMP device.   |
| 0xA003     | Minor    | TPM device failed self test.  | Replace TPM device.   |
| 0xA027     | Minor    | Processor component encountered a low-voltage error.                                | Proceed but monitor. If other errors appear, replace.   |
| 0xA500     | Minor    | ATA/ATPI ATA bus SMART not supported.   | Add, then restart. If fails again, replace.   |
| 0xA5A0     | Minor    | PCI Express component encountered a PERR error.                                     | Restart. If fails again, replace.   |
| 0xA6A0     | Minor    | DXE boot services driver Not enough memory available to shadow a legacy option ROM. | Proceed if shadow memory is not required. Otherwise, remove unnecessary options to free memory. |

## Cisco BIOS Messages and Codes

Table 7-3 describes additional messages unique to the Cisco BIOS.

**Table 7-3** Additional messages unique to Cisco BIOS.

| Code | Severity | Message                   | Added/Changed      | Action   |
|------|----------|---------------------------|--------------------|--|
| E000 | Major    | Memory RAS mirror fail.   | Added.             | Replace failed DIMMs.  |
| E001 | Major    | Memory RAS spare fail.    | Added.             | Replace failed DIMMs.  |
| E00A | Major    | Memory BMC SPD read fail. | Added.             | Replace failed DIMMs.  |
| E1xx | Major    | DIMM xx disabled.         | Changed from 854x. | Replace any failed DIMMs and verify DIMMs in valid configuration |

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

| <b>Code</b> | <b>Severity</b>             | <b>Message</b>  | <b>Added/Changed</b> | <b>Action</b>   |
|-------------|-----------------------------|---|----------------------|---|
| E2xx        | Major                       | DIMM xx component encountered a Serial Presence Detection (SPD) fail error. | Changed from 856x.   | Replace failed DIMM.  |
| E3xx        | Major                       | DIMM xx encountered a mismatch error.                                       | Added.               | Replace mismatched DIMM.  |
| E4xx        | Major                       | DIMM xx failed self test (BIST).  | Changed from 852x.   | Replace failed DIMM.  |
| E500        | Major                       | Memory-other DIMM failed.   | Added.               | Replace failed DIMM.  |
| E600        | Major                       | Memory-invalid population.  | Added.               | Replace failed DIMM.  |
| E700        | Major                       | Memory-mismatch population.   | Added.               | Replace failed DIMM.  |
| E800        | Major                       | Memory-SPD error.   | Added.               | Replace failed DIMM.  |
| E900        | Major                       | Memory-platform specific.   | Added.               | Replace failed DIMM.  |
| D000        | Fatal (blade will not boot) | Unsupported SPI flash.  | Added.               | Blade manufactured with wrong SPI flash part. Return materials authorization (RMA) the blade. |

## CHAPTER 8

# Baseboard Management Controller Messages

---

The Baseboard Management Controller (BMC) provides the interface to the System Event Log (SEL). The SEL can be accessed from the system side as well as from other external interfaces. The BMC uses a message handler to route messages between the different interfaces. It also monitors and manages the system board, including temperatures and voltages.

The following sections are included:

- [SEL Device, page 8-1](#)
- [Sensor Data Record Device, page 8-2](#)
- [Event Receiver Device, page 8-3](#)
- [BMC Commands, page 8-3](#)
- [SEL Record Examples, page 8-8](#)

## SEL Device

The SEL is a nonvolatile repository for system events. The SEL device is separate from the event receiver device and accepts commands to manage the contents.

This section includes the following topics:

- [SEL Event Record Format, page 8-1](#)
- [Sensor Initialization Agent, page 8-2](#)

## SEL Event Record Format

The SEL messages are logged as a 16 byte string that contains the information about the change that triggered the message.

- Byte 1 and 2 is the record ID.
- Byte 3 is the record type.
- Bytes 4, 5, 6, and 7 is the timestamp
- Bytes 8 and 9 is the generator ID.
- Byte 10 is the version of the event message format.
- Byte 11 is the sensor type.
- Byte 12 is the sensor number.

## ***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

- Byte 13 is either the event dir (assertion/deassertion event) or the event type.
- Byte 14, 15, and 16 are links to the event data field contents and determines whether the sensor class is about threshold, discrete, or original equipment manufacturer (OEM) settings.

## **Sensor Initialization Agent**

The Sensor Initialization Agent is not a logical device, but a collection of functions and services specific to handling SDR information. The Sensor Initialization Agent works directly with the content of SDRs, in particular, with the sensor data records and the device locator records.

The agent uses the SDR information for sensor and IPMB device initialization during system startup. The agent interprets sensor data records and is directed by the *init required* fields to load thresholds to sensors that have the *threshold initialization required* bit set in the SDR records. Other bits in the record direct the agent to enable sensors and devices that come up with sensors, events, or both disabled.

The agent function runs at system power-up and at any system hard resets. We recommend that you run the agent function when the BMC first receives standby power.

In systems that implement power management, the system management software takes additional steps to restore intermediate settings after the system has powered up.

## **Sensor Data Record Device**

The Sensor Data Record (SDR) device provides the interface to the sensor data records. A set of commands store and retrieve sensor data records. The SDR device provides a set of commands for discovering, configuring, and accessing sensors.

This section includes the following topics:

- [SDR Repository Interface, page 8-2](#)
- [Modal and Nonmodal SDR Repositories, page 8-2](#)

## **SDR Repository Interface**

The SDR repository holds sensor, device locator, and entity association records for all sensors in the platform management subsystem. The BMC provides this interface to the SDR repository. The sensor data records can be accessed by using SDR commands.

## **Modal and Nonmodal SDR Repositories**

There are two SDR repository implementations: modal and nonmodal.

A modal SDR repository is only updated when the controller is in SDR repository update mode. SDR information is kept in nonvolatile storage devices. Lengthy write operations during update can be required, which can interfere with other controller operations. For example, the SDR repository can be stored in a flash device that also holds a portion of the management controller code. A modal SDR repository implementation allows the functions associated with that code to be temporarily unavailable during the update process.

A nonmodal SDR repository can be written to at any time. Writing to the SDR does not impact the operation of other commands in the management controller.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## Event Receiver Device

Event messages are special messages sent to management controllers when they detect significant or critical system management events. This includes messages for events such as temperature threshold exceeded, voltage threshold exceeded, power fault, and so on. The device generating an event message notifies the system by sending the message to the event receiver device.

Messages from the event receiver device are directly written into the system event log. The appropriate **Add SEL Entry** command is sent directly to the SEL device.

## BMC Commands

SEL, SDR, and event commands are designed so that the devices that implement those command sets are isolated from the contents of the message. The devices do not interpret the messages. The event receiver device receives and routes event messages. The SEL devices retrieve and store log entries. The SDR devices retrieve and store sensor data records.

This section includes the following topics:

- [SEL Device Commands, page 8-3](#)
- [SDR Repository Device Commands, page 8-5](#)
- [Event Receiver Commands, page 8-7](#)

## SEL Device Commands

These are the available SEL device commands:

- [Get SEL Info, page 8-3](#)
- [Get SEL Allocation Info, page 8-4](#)
- [Reserve SEL, page 8-4](#)
- [Get SEL Entry, page 8-4](#)
- [Add SEL Entry, page 8-4](#)
- [Partial Add SEL Entry, page 8-4](#)
- [Delete SEL Entry, page 8-4](#)
- [Clear SEL, page 8-4](#)
- [Get SEL Time, page 8-4](#)
- [Set SEL Time, page 8-5](#)
- [Get Auxiliary Log Status, page 8-5](#)
- [Set Auxiliary Log Status, page 8-5](#)

### Get SEL Info

This command returns the number of entries in the SEL, the SEL command version, and the timestamp for the most recent entry and delete or clear.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## Get SEL Allocation Info

This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 16 byte record is to be added, and the SEL has a 32 byte allocation unit size, the record takes up 32 bytes of storage.

## Reserve SEL

This command sets the present owner of the SEL, as identified by the software ID or by the requester slave address from the command. The reservation process provides a limited amount of protection at repository access from the Intelligent Platform Management Interface (IPMB) when records are being deleted or incrementally read.

## Get SEL Entry

This command retrieves entries from the SEL. The record data field in the response returns the 16 bytes of data from the SEL event record.

## Add SEL Entry

This command enables the BIOS to add records to the system event log. Normally, the SEL device and the event receiver service are incorporated into the same management controller. In this case, BIOS or the system SMI handler adds its own events to the SEL by formatting an event message and sending it to the SEL device rather than by using this command.

## Partial Add SEL Entry

This command is a version of the **Add SEL Entry** command. It allows the record to be incrementally added to the SEL. This command must be preceded by a **Reserve SEL** command. The first partial add must be to offset 0000h, and subsequent partial adds must be done sequentially, with no gaps or overlap between the adds.

## Delete SEL Entry

This command deletes the specified entry in the SEL.

## Clear SEL

This command erases the SEL contents. This process can take several seconds, based on the type of storage device. The command also shows the status of the erasure.

## Get SEL Time

This command returns the time from the SEL device, which uses it for event timestamps.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## Set SEL Time

This command initializes the time setting in the SEL device, which uses it for event timestamps.

## Get Auxiliary Log Status

This command allows remote software to know whether new information has been added to machine check architecture (MCA) log. The MCA log is a storage area that can be implemented in Intel Itanium-based computer systems and holds information from an MCA handler running from system firmware.

## Set Auxiliary Log Status

This command can be used by system software or firmware to set the status returned by the **Get Auxiliary Log Status** command. Some implementations might use a private mechanism to set this status, in which case this command can not be provided even if the **Get Auxiliary Log Status** command is provided.

## SDR Repository Device Commands

The following commands control the SDR repository device actions:

- [Get SDR Repository Info, page 8-5](#)
- [Get SDR Repository Allocation Info, page 8-6](#)
- [Reserve SDR Repository, page 8-6](#)
- [Get SDR, page 8-6](#)
- [Add SDR, page 8-6](#)
- [Partial Add SDR, page 8-6](#)
- [Delete SDR, page 8-6](#)
- [Clear SDR Repository, page 8-6](#)
- [Get SDR Repository Time, page 8-7](#)
- [Set SDR Repository Time, page 8-7](#)
- [Enter SDR Repository Update Mode, page 8-7](#)
- [Exit SDR Repository Update Mode, page 8-7](#)
- [Run Initialization Agent, page 8-7](#)

## Get SDR Repository Info

This command returns the SDR command version for the SDR repository. It also returns a timestamp for the last add, delete, or clear commands.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## Get SDR Repository Allocation Info

This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 20 byte record is to be added, and the SDR repository has a 16 byte allocation unit size, then the record would take up 32 bytes of storage.

## Reserve SDR Repository

This command sets the present owner of the repository, as identified by the software ID or the requester slave address from the command. The reservation process provides a limited amount of protection on repository access from the IPMB when records are being deleted or incrementally read.

## Get SDR

This command returns the sensor record specified by the record ID. The command also accepts a byte range specification that allows a selected portion of the record to be retrieved (incremental read). The **Reserve SDR Repository** command must be issued first for an incremental read to an offset other than 0000h. (The **Get SDR Repository Info** command should be used to verify the version of the SDR repository before sending other SDR repository commands. The command format and operation could change between versions.)

## Add SDR

This command adds the specified sensor record to the SDR repository and returns its record ID. The data passed in the request must contain all of the SDR data.

## Partial Add SDR

This command is a version of the **Add SDR** command that allows the record to be incrementally added to the repository. This command must be preceded by a **Reserve SDR Repository** command. The first partial add must be to offset 0000h, and partial adds must be done sequentially, with no gaps or overlap between the adds.

## Delete SDR

This command deletes the sensor record specified by record ID. The requester ID and the reservation ID must also match the owner of the SDR repository.

## Clear SDR Repository

This command clears all records from the SDR repository and reinitializes the SDR repository subsystem. The requestor ID and reservation ID information must match the present owner of the SDR repository. We recommend that this command not be used within your utilities and system management software.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## Get SDR Repository Time

This command returns the time setting from the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.

## Set SDR Repository Time

This command initializes the time setting in the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.

## Enter SDR Repository Update Mode

This command enters a mode that allows a subset of normal commands. Available commands are **Get Device ID**, **Get SDR**, **Add SDR**, **Partial Add SDR** and **Clear SDR Repository**.

## Exit SDR Repository Update Mode

This command exits the SDR repository update mode and restores normal use of all commands.

## Run Initialization Agent

This command runs the initialization agent and can also check the status of the agent.

## Event Receiver Commands

The following commands can be executed on the event receiver device:

- [Set Event Receiver, page 8-7](#)
- [Get Event Receiver, page 8-7](#)
- [Platform Event Message, page 8-7](#)

## Set Event Receiver

This is a global command to tell a controller where to send event messages. The slave address and LUN of the event receiver must be provided. A value FFh for the event receiver slave address disables the generation of event messages.

## Get Event Receiver

This is a global command to retrieve the present setting for the event receiver slave address and LUN.

## Platform Event Message

This command is a request for the BMC to process event data that the command contains. The data is logged to the SEL.

*Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)*

## SEL Record Examples

Examples that are reported to the SEL Repository are provided here. The raw record contains 16 bytes and are displayed in the examples as hexadecimal values. Following the arrow is the translation of the data. The l-pipes are separators for ease of reading the translation.

The following topics are included:

- [Device Presence Changes, page 8-8](#)
- [LED Color Changes, page 8-9](#)
- [Voltage Changes, page 8-9](#)
- [Temperature Changes, page 8-9](#)

## Device Presence Changes

These are examples of presence assertions. This shows a boot-up process.

## **PART 3**

### **Cisco UCS Manager Error Messages**

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## CHAPTER 9

# Cisco UCS Error Messages

---

This chapter contains a list of error messages that you may see in a Cisco UCS instance. This chapter contains the following sections:

- [Overview, page 9-1](#)
- [Information and Warning Messages, page 9-2](#)
- [FSM Messages, page 9-19](#)

## Overview

Cisco UCS error messages typically display in Cisco UCS Manager GUI and Cisco UCS Manager CLI.

These error messages are specific to the action that a user is performing or the object that a user is configuring or administering. These messages can be the following:

- Informational messages, providing assistance and tips about the action being performed
- Warning messages, providing information about system errors related to an object, such as a user account or service profile, that the user is configuring or administering
- FSM status messages, providing information about the status of an FSM stage

Many error messages contain one or more variables. What information that Cisco UCS Manager uses to replace these variables depends upon the context in which you see the message. Some messages can be generated by more than one type of error.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

## Information and Warning Messages

Failed to get the current time.

An snprintf process failed.

Create-only and naming properties cannot be modified after creation (class=%s, property=%s).

Cannot execute SAM pin command (exit code %d).

Cannot execute SAM unpin command (exit code %d).

Failed to execute reload all command (exit code %d).

A lower privilege user cannot delete a session of higher privilege user.

Provider order numbers must be unique.

Failed to get aaa:RadiusEp object.

Failed to get aaa:AuthRealm object.

RADIUS providers cannot be deleted while authentication realm is set to use RADIUS.

The order of RADIUS providers cannot be changed while authentication realm is set to use RADIUS.

The system does not allow more than %d providers.

TACACS providers cannot be deleted while authentication is set to use TACACS.

The order of TACACS providers cannot be changed while authentication realm is set to use TACACS.

Failed to get aaa:LdapEpMo object.

LDAP providers cannot be deleted while authentication is set to use LDAP.

The order of LDAP providers cannot be changed while authentication realm is set to use LDAP.

Failed to get aaa:Ep object.

Duplicate user MO.

User %s was not found.

Failed to cast to UserMo, user %s.

Failed to create UserLoginMo, user %s.

Failed to get shadow password entry.

Failed to get aaa::Realm object.

Failed to get aaa::UserEp object.

The SSH key format is invalid.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

Expiration date must be set to expire the user account.

Failed to convert date into internal format.

Valid year value is between 1970 and 2037.

User account expiration can be set only for future.

Cannot delete locale '%s' with a reference in user account '%s'.

System does not allow more than %d locales.

Failed to cast to AAA organization MO.

Referred Organization MO does not exist.

Cannot delete role '%s' with a reference in user account '%s'.

System does not allow more than %d roles.

Role name '%s' is a reserved word.

'%s' role should have at least one privilege.

System does not allow more than %d total privileges across all roles.

Role %s cannot be deleted from user %s.

Role %s was not found.

locale %s was not found.

User %s cannot delete itself.

System does not allow more than %d users.

User name '%s' is a reserved word.

%s account cannot be modified by a lower privileged account.

System does not allow deleting %s account.

%s account does not expire.

System does not allow modifying roles for %s account.

System does not allow modifying locales for %s account.

'%s' role cannot be deleted.

'%s' role cannot be modified, priv %d.

User %s's privileges (admin, aaa, fault or operations) and locale assignment are incompatible.

User %s's privileges and locale assignment are incompatible.

Admin privilege can be assigned to a user only by another user with admin privilege.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

A contact must be specified.

%s email address must be specified.

%s email address must contain an '@'

%s email address must contain name before '@'

%s email address must contain hostname after '@'

%s email address must contain only one '@'.

Must specify a contact phone number.

The contact phone number must be in international format (e.g., +1-800-123-4567).

A contact address must be specified.

An SMTP server address must be specified.

Number of Call Home profiles must not exceed %d.

Cannot delete default profiles.

The format of a full-text profile must be full-text.

The format of short-text profile must be short-text.

The format of the Cisco TAC profile must be XML.

Only Cisco TAC alert is allowed with built-in Cisco TAC profile.

Cannot obtain callhome::SourceMo!

Cannot find callhome::SmtMo!

Cannot cast to callhome::EpMo!

%s

%d

%d

The chassis decommission is in progress; wait for it to complete.

Cannot mark %s out of service.

Port %s is already allocated to %s.

Slot identity is being established. Try again later.

The number of VSANs on a fabric interconnect cannot exceed %d.

SwitchId property needs to be set to the ID of corresponding fabric interconnect domain, MO id:%u, required id:%u.

Explicit deletion of FC Port VSAN object is prohibited; create under a different VSAN.

***Send document comments to [ucs-docfeedback@cisco.com](mailto:ucs-docfeedback@cisco.com)***

The default VSAN object was not found.

The default cannot be deleted.

Configuration for FC Port %u/%u does not exist for fabric interconnect %s.

VSAN %u (of network %s) and %u (of network %s) - both cannot share the FCoE VLAN %u.

Networks %s and %s - both cannot share same VSAN id (%u) with different FCoE VLAN ids (%u and %u respectively).

Logical Server EP managed object is NULL.

Only one VSAN per port supported.

Number of VLANs on a fabric interconnect cannot exceed %d.

Port-Channel %u contains %u ports, maximum allowed is %u.

Number of port-channels defined: %u, maximum allowed is %u.

VNET %d is already configured as inband management VNET.

Internal error: 1G speed is invalid for the port %u/%u.

Internal error: cannot create fabric interconnect configuration %u/%u MO.

Internal error: cannot create fabric interconnect configuration port-channel %u MO.

Default VLAN cannot be deleted.

Circuit can be reset only on virtualized adapters.

ClusterState request failed, state not initialized.

Motherboard of blade %s was not found.

Motherboard of blade %d/%d was not found.

Blade %s.

No adaptor %s in blade %s.

Motherboard of blade %s.

Blade %s was not found.

Cannot find blade %d/%d.

Empty FRU information; cannot create Chassis/IOM objects.

Fabric interconnect:%u slot:%u port:%u not a serverport.

Fabric interconnect:%u slot:%u port:%u is not operationally up.

No chassis ID is available.
