

# Network Admission Control

**Glen Stacey**  
**System Engineer**  
**Atlantic Canada Team**

# Business Demands Require Strong Access Control

- Information security **threats** and endpoint **vulnerabilities** are growing faster than ever
- **Disappearing security boundaries** expose internal infrastructure and assets
- Stricter **corporate-defined policies** and **government and regulatory** compliance requirements impact many organizations
- **Ensuring policy compliance** for all endpoint devices seeking network access is **critical to information security and business success**

***"Security policy enforcement and malware defenses at the traditional network perimeter are no longer sufficient to protect the information and systems connected to the internal network."***

**- Phil Schacter, Burton Group  
Mar 22, 2006**

# New Solution Is Needed

## device security

Anti-spyware      personal  
HIPS                  firewalls  
*anti-virus*

## identity

AAA  
*guest access*  
employee

## network security

*IDS/IPS*                  VPNs  
perimeter  
firewalls

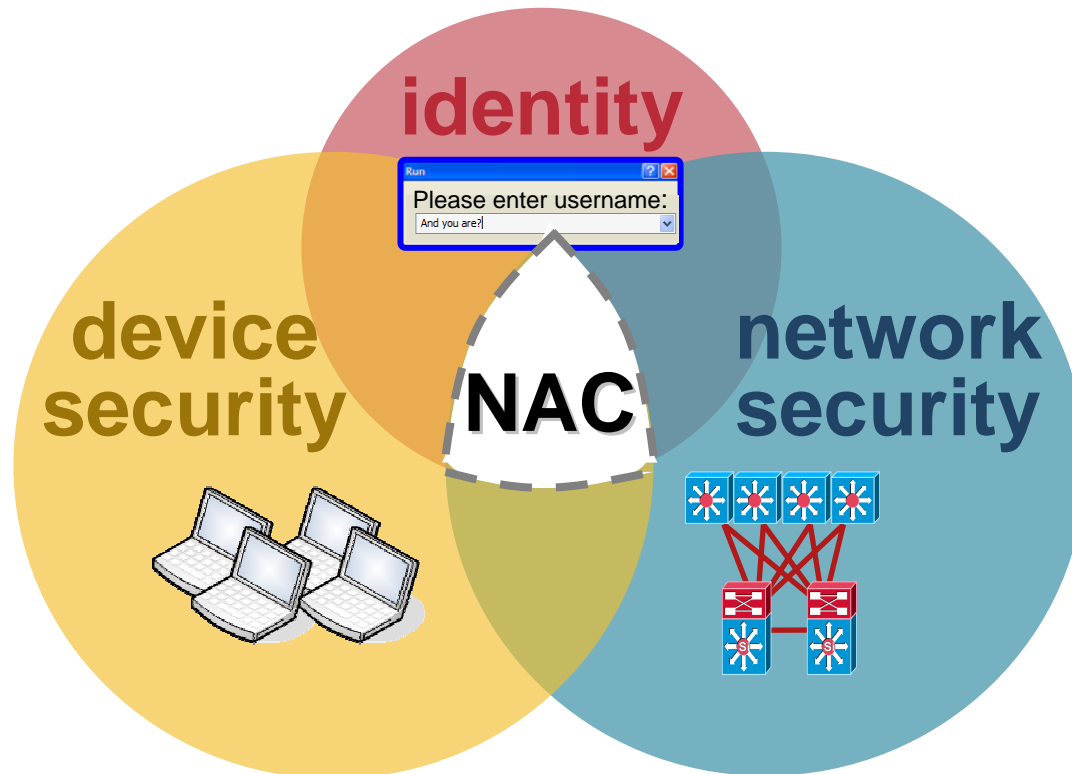

**X Identity alone fails:**  
Identifies user, but not device  
Network level access is typically controlled at network perimeter, but not on the internal network

**X Endpoint security alone fails:**  
Most corporate assets have AV, but infections persist!  
Host based apps are easily manipulated (even unintentionally)  
Lag time between new viruses and anti-virus patch upgrade cycle  
Non-corporate assets often do not meet security requirements

**X Network security alone fails:**  
Firewalls cannot block legitimate ports  
VPNs cannot block legitimate users  
Detection often occurs after-the-fact  
Difficult to implement access control if users are on the internal network

# What Is Network Admission Control?

**Network Admission Control (NAC) is a solution that uses the network infrastructure to ensure all devices seeking network access comply with an organization's security policy**

# Why Use The Network for Admission Control?

- Every bit of **data** you are concerned about touches the network
- Every **device** you are concerned about is attached to the network
- **Broadest possible security solution** covering the **largest number of networked devices** can be deployed
- Provides a consistent secure policy to all parts of the network with the **smallest IT footprint** possible

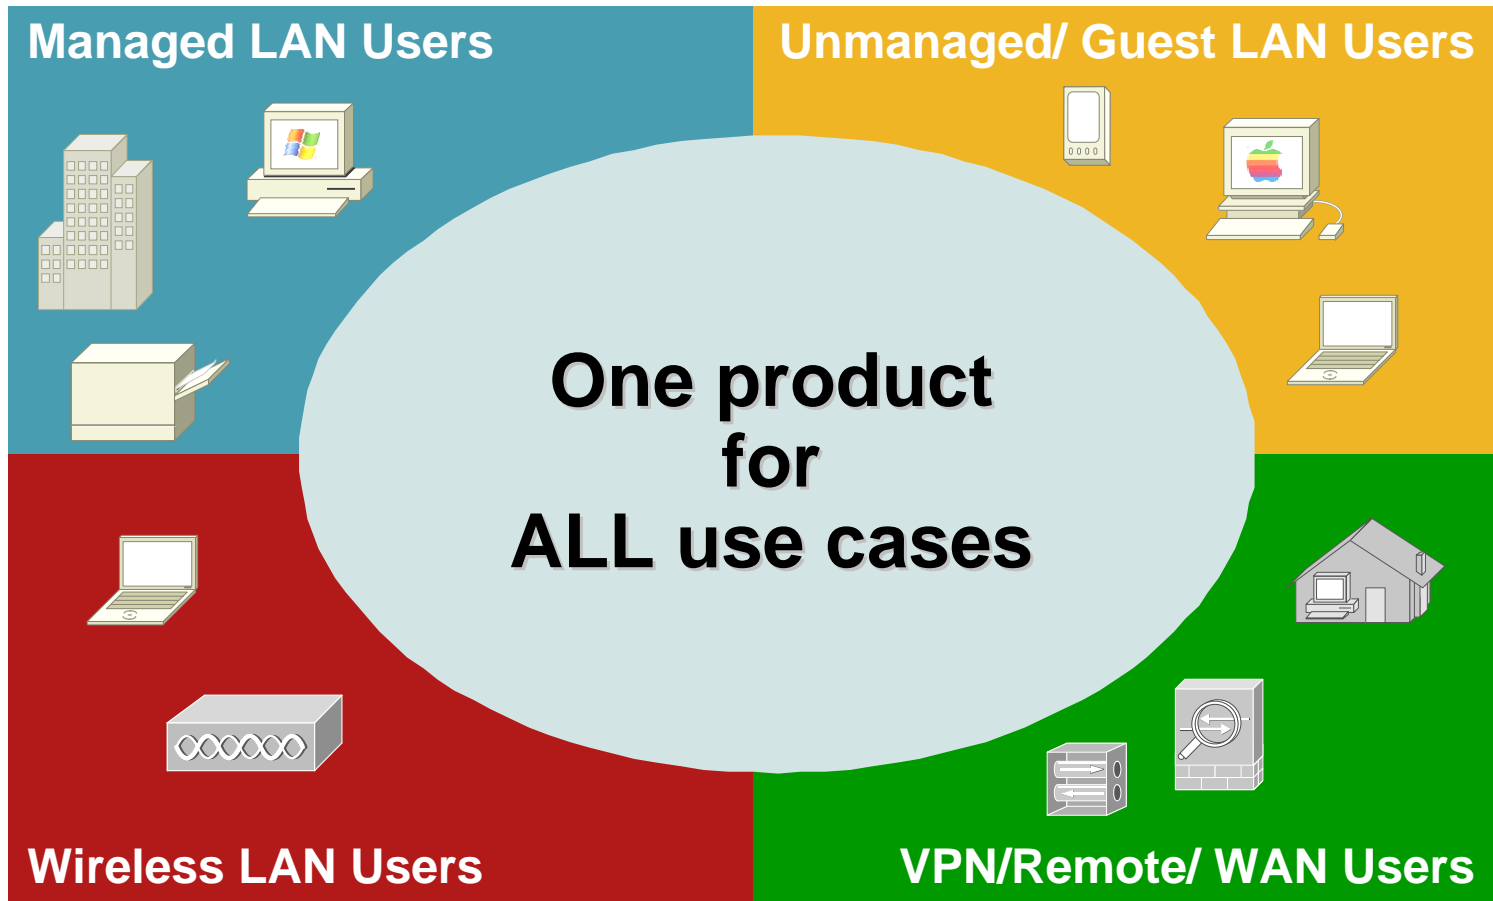

# Four Key Capabilities of NAC

	<b>SECURELY IDENTIFY DEVICE &amp; USER</b>	<b>ENFORCE CONSISTENT POLICY</b>	<b>QUARANTINE AND REMEDIATE</b>	<b>CONFIGURE AND MANAGE</b>
<b>WHAT IT MEANS</b>	Uniquely identifies users and devices, and creates associations between the two	Ubiquitously assesses and enforces a policy across the entire network	Acts on posture assessment results, isolates device, and brings it into compliance	Easily creates comprehensive, granular policies that map quickly to user groups and roles
<b>WHY IT IS IMPORTANT</b>	Associating users with devices enables granular enforcement in policies by role or group	Enforcement at the network level provides a solid foundation for holistic security	Quarantine critical to halt damage due to non-compliance; remediation addresses root cause problems	Policies that are easy to create and maintain lead to better system operations and adherence

**A robust NAC solution must have all four capabilities.**

# The Cisco NAC Appliance Advantage

# Cisco NAC Appliance (Cisco Clean Access) Components

- **Network Admission Control Server**
  - Serves as an in-band or out-of-band device for network access control
- **Network Admission Control Manager**
  - Centralizes management for administrators, support personnel, and operators
- **Network Admission Control Agent**
  - Optional lightweight client for device-based registry scans in unmanaged environments
- **Rule-set Updates**
  - Scheduled automatic updates for anti-virus, critical hot-fixes and other applications

# NAC Appliance Overview: Solution Sizing

**Super Manager**

manages up to 40

Users = online, concurrent

**Standard Manager**

manages up to 20

**Enterprise and Branch Servers**

**Enterprise and Branch Servers**

**Manager Lite**

manages up to 3

**Branch Office or SMB Servers**

100 users

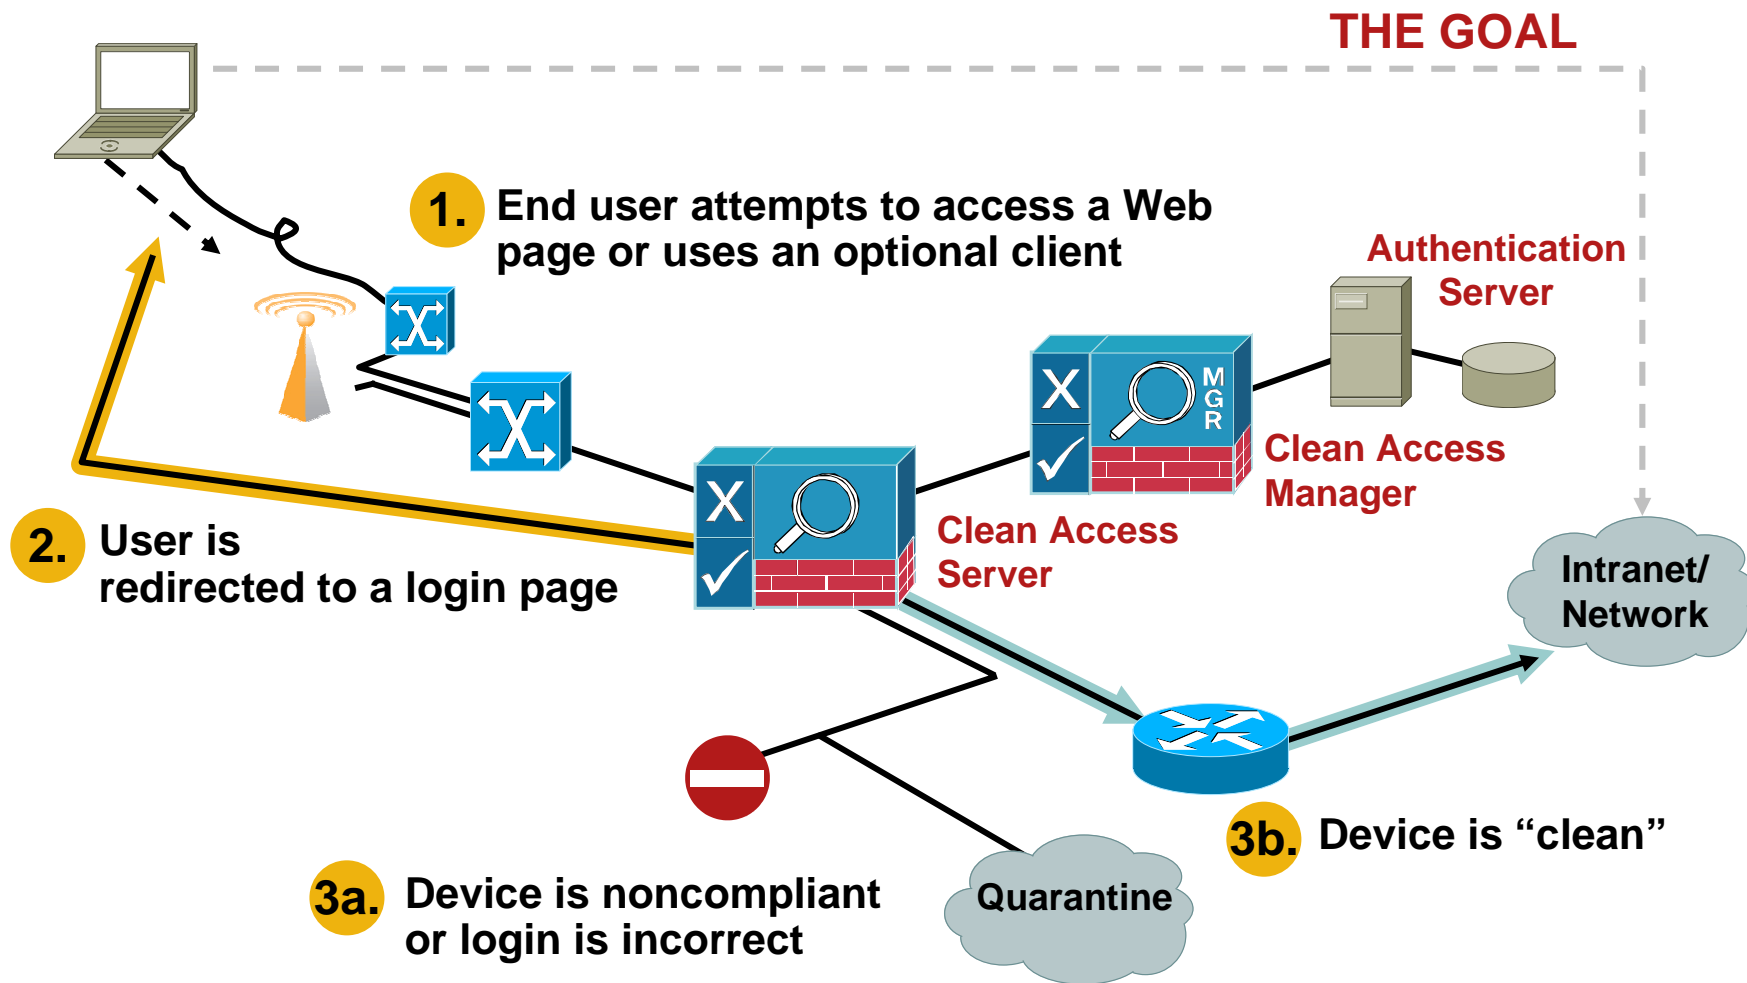

250 users

500 users

1500 users each

2500 users each

# Cisco NAC Appliance: Product User Flow Overview

# NAC: In Band & Out of Band

- NAC Servers have two traffic flow deployment models
  - In Band
  - Out of Band
- Any NAC Server can be configured for either method, but a NAC Server can only be one at a time
- Selection is based on whether the customer wants to remove the NAC Server from the data path
- NAC Server is **ALWAYS** inline during Posture Assessment

# NAC: In Band

- Easiest deployment option
- Server is Inline ( in the data path ) before and after posture assessment
- Supports any switch, any hub, any AP
- Role Based Access Control  
Guest, Contractor, Employee
- ACL Filtering and Bandwidth Throttling

# NAC: Out of Band

- Multi-Gig Throughput deployment option
- Server is Inline for Posture Assessment Only
- Supports most common Cisco Switches \*\*
- Port VLAN Based and Role Based Access Control
- ACL Filtering and Bandwidth Throttling for Posture Assessment Only

# Cisco NAC Appliance: Sampling of Pre-Configured Checks

## Critical Windows Updates

**Windows XP, Windows 2000,  
Windows 98, Windows ME**

## Anti-Virus Updates

## Anti-Spyware Updates

## Other 3<sup>rd</sup> Party Checks

Privacy. Protection. Peace of mind.

**Customers can easily add customized checks**

# Cisco NAC Appliance: Admin Control with Real-Time Information

USER

ADMIN

Cisco Clean Access Agent

### Clean Access Agent

**⚠ You have temporary access !**

Your system does not meet the requirements enforced by the network administrator. You may only have limited access to the network until your system meets all the requirements.

There is approximately 0:03:59 left before your temporary access expires.

Please click on "Continue" and follow the instructions to satisfy network access requirements.

**Continue**

## Cisco Clean Access Manager Version 3.5.2

Monitoring > Online Users

View Online Users | Display Settings

Any CCA Server | Any Provider | Any Role

Online Users 1 - 1 of 1 | First | Previous | Next | Last |

User Name	User IP	User MAC	Provider	Role	VLAN	OS	
consultant	10.10.10.202	00:0C:29:72:46:90	Local DB	Quarantine Role	N/A	Windows XP	

Logs can be viewed locally or sent via Syslog to an off-box collection engine for custom reports

# Cisco NAC Partner Program

- The NAC Partner Program is a third-party-technology integration program
- Over 70 industry leading security and management program participants with 25 certified, shipping solutions.
- Specific APIs are available for product integration in areas of assessment, remediation, and monitoring/reporting of an integrated NAC solution
- Useful for NAC customers with existing or planned investments in these partners' products
- For a complete partner list, see: [www.cisco.com/go/nac/program](http://www.cisco.com/go/nac/program)

# Cisco NAC Advantages

- **Comprehensive span of control**  
Routers, switches, VPN, wireless, plus complex deployments, including IP telephony
- **Controls managed, unmanaged, and guest endpoint devices**  
Effective solution to integrate device posture and user identity
- **Device posture security decisions made at the network, not on the endpoint device**  
Ability to prevent spoofed device as “compliant” and rock-solid policy enforcement
- **Enjoys widest use of any technology**  
Largest deployed NAC solution to date  
Including the most robust partner program
- **Grow as your NAC solution as your network expands with Appliance *and* Framework components**

# Cisco NAC Benefits

- **Secure both managed or unmanaged assets**
  - Consistent security standards applied for all assets
  - Broad integration with multi-vendor security products
- **Ensure policy compliance**
  - Security policy compliance enforcement at the network level
  - Addresses issues of disappearing security boundaries and unauthorized access
  - Assists in achieving regulatory compliance
- **Proactive protection against viruses and worms**
  - Controls and reduces large-scale infrastructure disruptions
  - Reduces OpEx and maintains higher employee productivity
- **Integration with additional Cisco Self-Defending Network components**
  - Such as integration with the Cisco Security Agent

# Monitor, Analyze and Respond with CS-MARS

**Glen Stacey**  
**System Engineer**  
**Atlantic Canada Team**

# Cisco Self-Defending Network

A systems approach leveraging the Network Platform

## Integrated

Enabling every element to be a point of defense and policy enforcement

## Collaborative

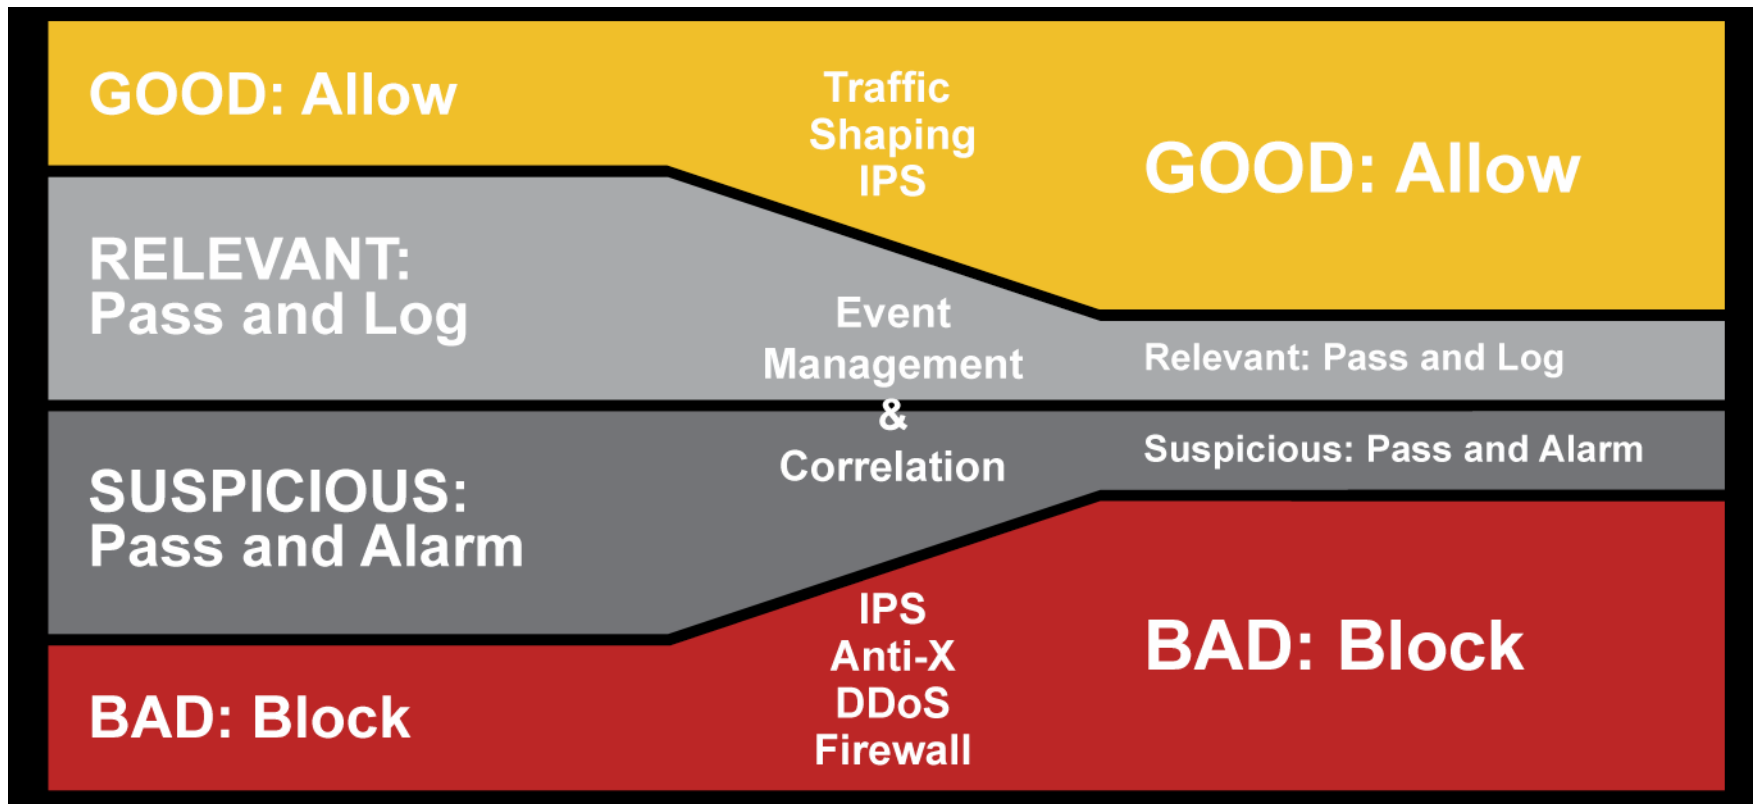

Collaboration among the services and devices throughout the network to thwart attacks

## Adaptive

Proactive security technologies that automatically prevent threats

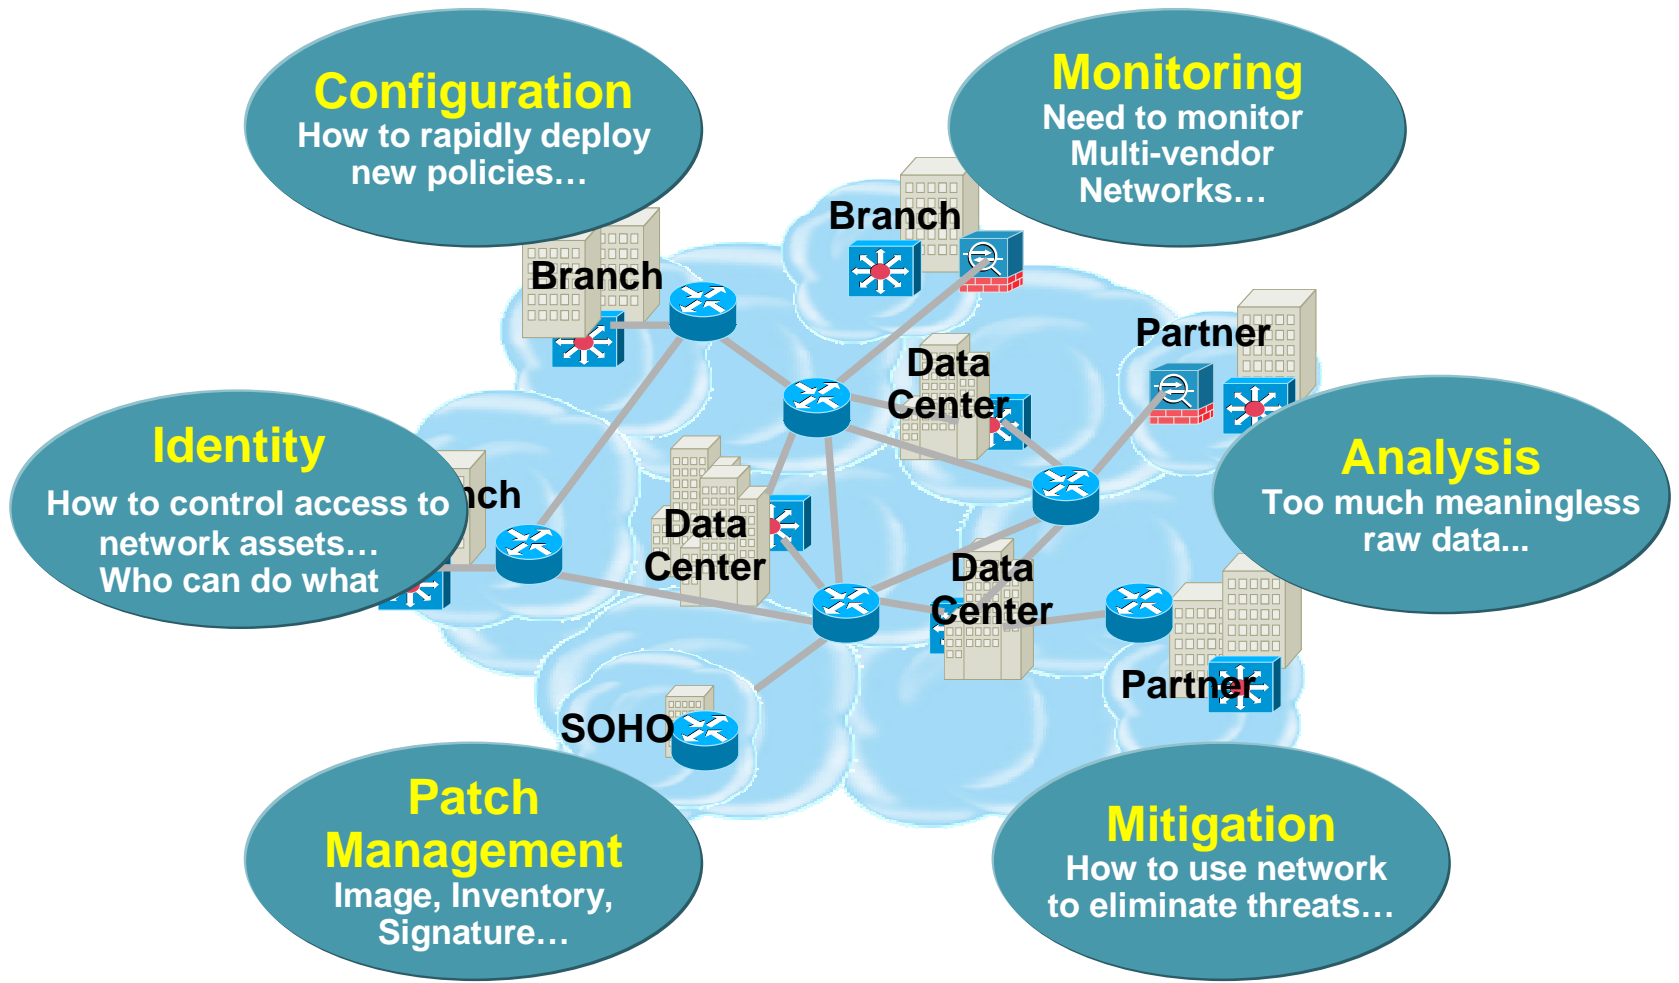

# Reducing the Gray Area

**Highly Manual**

**Automation Enablement**

# Critical Enterprise Security Practices

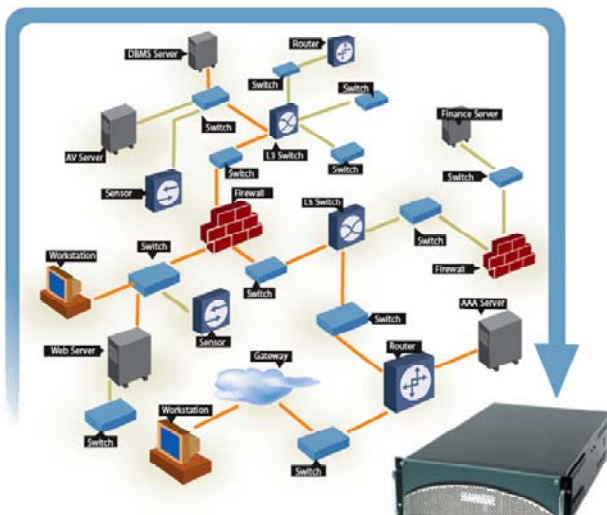

# Cisco Security – MARS

## Monitoring, Analysis and Response System

- Command and control of your existing investment to build “pervasive security”
- Correlate data from across the Enterprise  
NIDS, Firewalls, Routers, Switches, CSA  
Syslog, SNMP, RDEP, SDEE, NetFlow, Endpoint event logs, Multi-Vendor
- Rapidly locate and mitigate attacks

Firewall Log	IDS Event	Server Log
Switch Log	Firewall Cfg.	AV Alert
Switch Cfg.	NAT Cfg.	App Log
Router Cfg.	Netflow	VA Scanner

- Key Features

Determines security *incidents* based on device *messages*, *events*, and “*sessions*”

*Incidents* are topologically aware for visualization and replay

Mitigation on L2 ports and L3 chokepoints

# Cisco Security - MARS Feature Overview

## Key features

- Collect, aggregate & correlate from heterogeneous devices in a single appliance  
SDEE, Syslog, Host logs, Firewall logs .... From Cisco, Non-Cisco and Custom devices  
No software agents required
- Network behavioural Analysis (NBA)  
Netflow and Traffic Flow analysis provides enhanced threat detection precision
- Topological Awareness  
Device Configuration (+NAT, +Routing) knowledge critical to global decision making  
Attack-path views for detailed investigation and troubleshooting
- Centralized dashboard for Unified Security Operations
- Mitigation Capabilities  
Layer 2 / Layer 3 Mitigation Suggestions (port disable, shun commands, ACLs etc.)
- Policy-Management Linkages

# Netflow as an input can assist with...

- **Who are my top N talkers? Which percentage?**
- **How many users are on the network at any given time? When will upgrades effect the least number of users?**
- **How long do my users surf?**
- **Where: which Internet sites do they use?**
- **Are users staying with in an acceptable usage policy?**
- **DOS attack detections!**
- **I have been attacked, which other machines could be having an issue?**

# Custom Parser

## It Is Possible to Create a Custom Parser for Any Device Sending Syslog or SNMP Traps?

1. Create a new **device/application** type
2. Create an **event** type for the new device/application
3. Define the patterns associated to the **event** type
4. Add this new device/application into CS-MARS

Device/Application Type Definition

→ \*Type:  Appliance  Software

→ \*Vendor:

→ \*Model:

→ \*Version:

System  All Severity

deny

- ACL log deny-flows reached limit
- Deny connection - no xlate
- Deny packet due to security policy
- Deny policy alarm

**Note:** If You Re-Use Events Already in the Database, the Predefined Reports and Rules Will Work Also for the Newly Defined Device

# Command and Control: Critical Data Reduction

## Incident Dashboard

- Aggregate
- Correlate
- Summarize

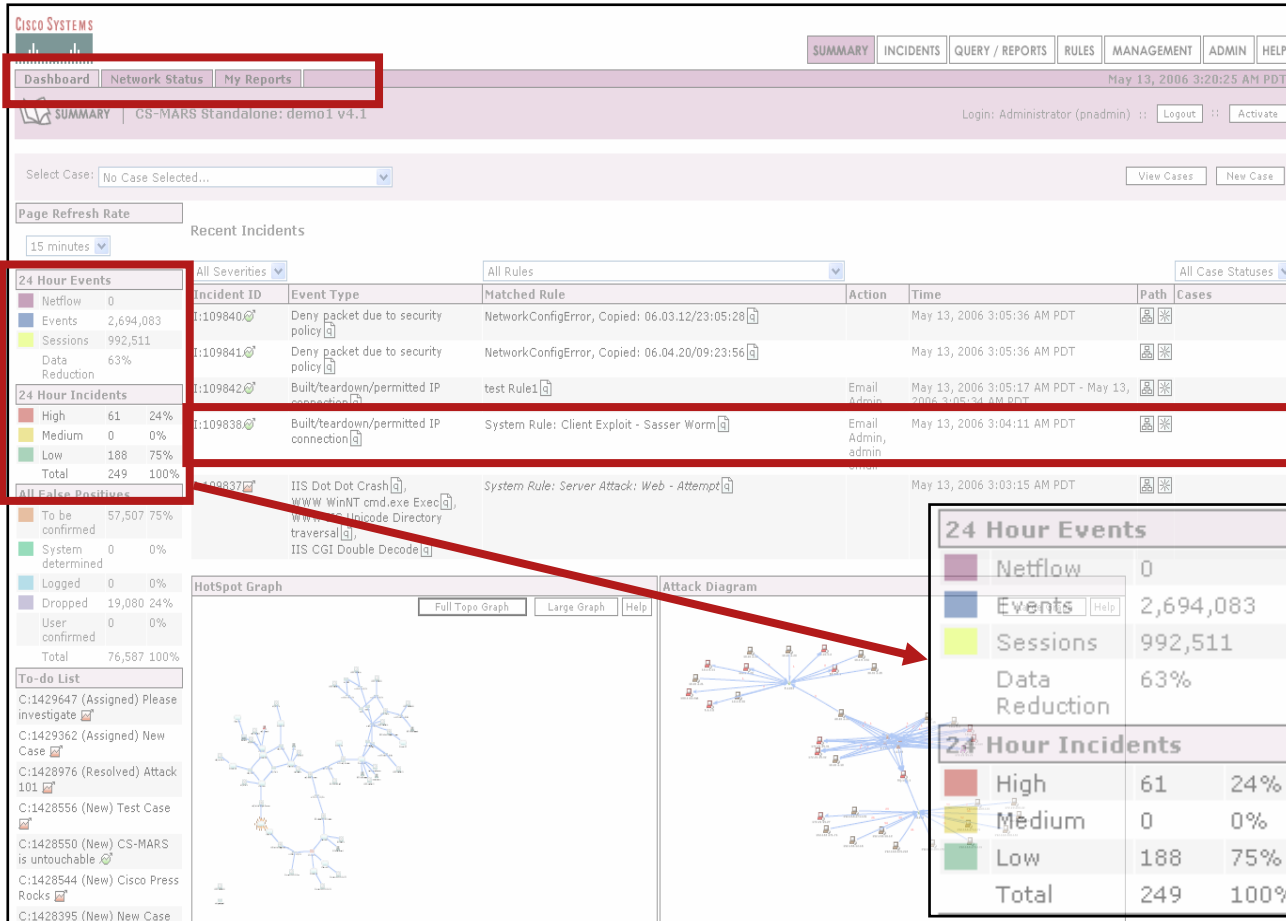

2,694,083 Events

992,511 Sessions

249 Incidents

61 High Severity Incidents

I Need to Clean My Network and Investigate Further

# Command and Control Dashboard Firewall Example

24 Hour Events		All Severities	All Rules			
Netflow	137,156					
Events	444,954					
Sessions	428,573					
Data Reduction	3%					
24 Hour Incidents						
High	4 36%					
Medium	3 27%					
Low	4 36%					
Total	11 100%					
Incident ID	Event Type	Matched Rule	Action	Time	Path	
I:260285295	Sudden increase of traffic to a port, Denied packet - no translation group	System Rule: DoS: Network - Success Likely		Nov 22, 2005 10:06:11 AM CET - Nov 22, 2005 10:11:05 AM CET		
I:260285294	Sudden increase of traffic to a port, Built/teardown/permitted IP connection	System Rule: Sudden Traffic Increase To Port	e-mail notify	Nov 22, 2005 10:11:05 AM CET		
I:260285292	Denied packet - no translation group	System Rule: Worm Propagation - Attempt		Nov 22, 2005 10:08:33 AM CET - Nov 22, 2005 10:08:34 AM CET		

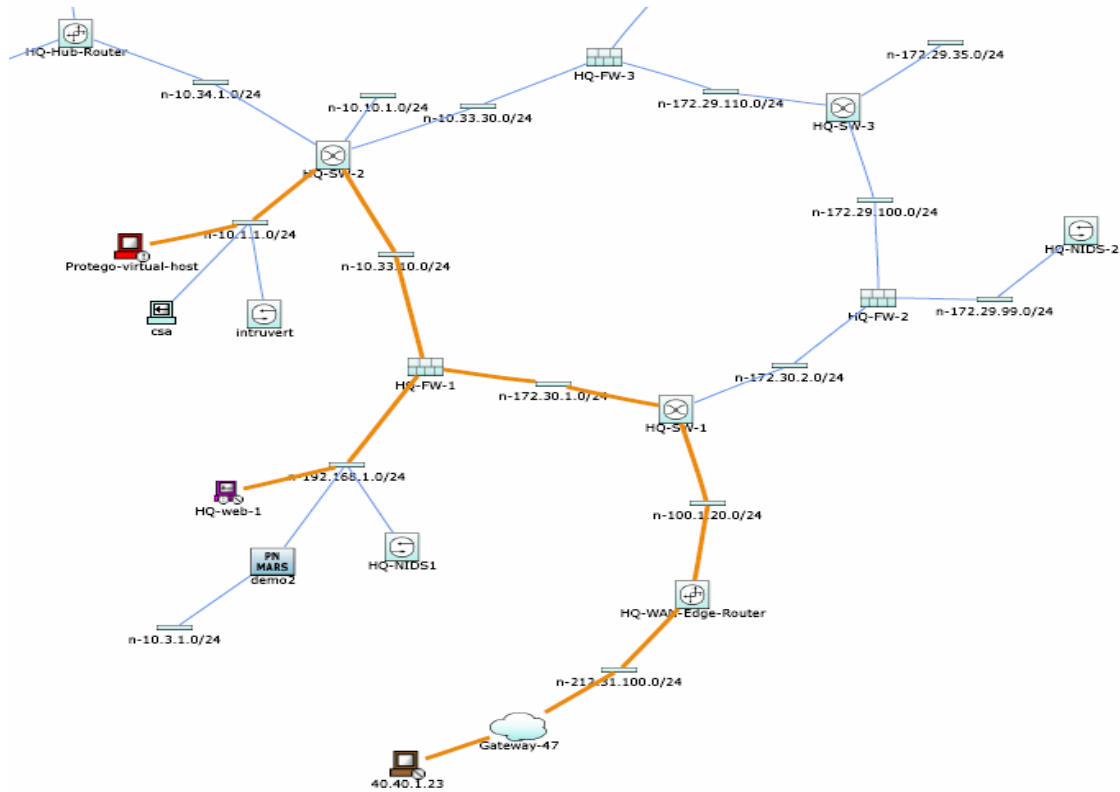

<b>Rule Name:</b>	System Rule: Worm Propagation - Attempt	<b>Status:</b>	Active									
<b>Action:</b>	None	<b>Time Range:</b>	0m:10s									
<b>Description:</b> This correlation rule detects worm propagation via means such as SMTP, TFTP, and network shares.												
Offset	Open (	Source IP	Destination IP	Service Name	Event	Device	Reported User	Keyword	Severity	Count	) Close	Operation

5		SAME, \$TARGET02, ANY	ANY	icmp (code: ANY, type: ANY, proto: ICMP)	ANY	ANY	None	ANY	ANY	100	)	OR
---	--	-----------------------	-----	--	-----	-----	------	-----	-----	-----	---	----

Denied packet - no translation group	10.1.1.246	0	10.1.61.1
Denied packet - no translation group	10.1.1.246	0	10.1.61.2
Denied packet - no translation group	10.1.1.246	0	10.1.61.3
Denied packet - no translation group	10.1.1.246	0	10.1.61.4

- 100 ICMP messages from the same source within ten seconds must mean something is wrong
- Have IDS functionality with just FW logs

# Attack Topology Awareness

## SureVector Analysis

Visible and accurate attack path

Drill-down, full incident and raw event details

Pinpoint the true sources of anomalous and attack behavior

More complete and accurate story

# Command and Control: Attack Mitigation

- Use control capabilities within your infrastructure

Layer 2/3 attack path is clearly visible

Mitigation enforcement devices are identified

Exact mitigation command is provided

Enforcement Device: switch\_server [a], Suggested

Enforcement Device Information

Device	Type	Manager	Children	Log To	Collects From	Info
switch_server [a]	Cisco Switch- IOS 12.2	Protego Networks MARS 1.0 on pntvalis		N/A		

Interface Information

Direction	IP Address	Interface Name	DNS Name	MAC Address	MAC Update Time
-----------	------------	----------------	----------	-------------	-----------------

Recommended Policy/Command

```
configure t
interface FastEthernet0/4
no ip address
shutdown
```

Push Cancel

# Reporting

# Compliance Reports

## Popular Reports With Customization and Distribution Options Queries Saved as Rules or Reports—Intuitive Framework

Report: Activity: Denies - Top Destination Ports Sep 8, 2004 1:07:45 PM PDT

Name	Schedule	Format	Recipients	Query	Description	Status	Submitted	Time Range
Activity: Denies - Top Destination Ports	Every hour	Normal	None	Event type: AttacksProtected, FirewallPolicyViolation/ACL, Query Type: Destination Ports ranked by Sessions Time: 1dd:0hh:0mm:0ss	This report ranks the destination ports to which attacks have been targetted but denied.	Finished: Sep 8, 2004 1:07:43 PM PDT	Sep 8, 2004 1:07:39 PM PDT	Sep 7, 2004 1:07:39 PM PDT - Sep 8, 2004 1:07:39 PM PDT

Report type: Destination Ports ranked by Sessions, 1dd:0hh:0mm:0ss

Source IP	Destination IP	Service	Events	Device	Severity	Zone	Operation	Rule	Action	Reported User
ANY	ANY	ANY	AttacksProtected, FirewallPolicyViolation/ACL	ANY	ANY	CA	None	ANY	ANY	ANY

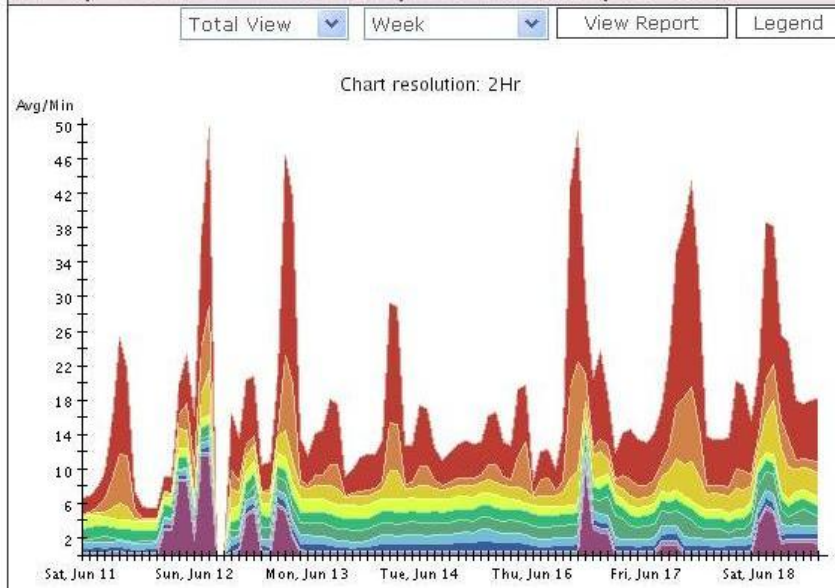

Keywords: [None]

Rank	Count (# of sessions)	Raw Destination Port
1	4704	445
2	3524	80
3	3349	26686
4	3183	135
5	2531	47683
6	1183	1026
7	1144	0
8	768	139
9	684	9898

# Network Traffic Investigation

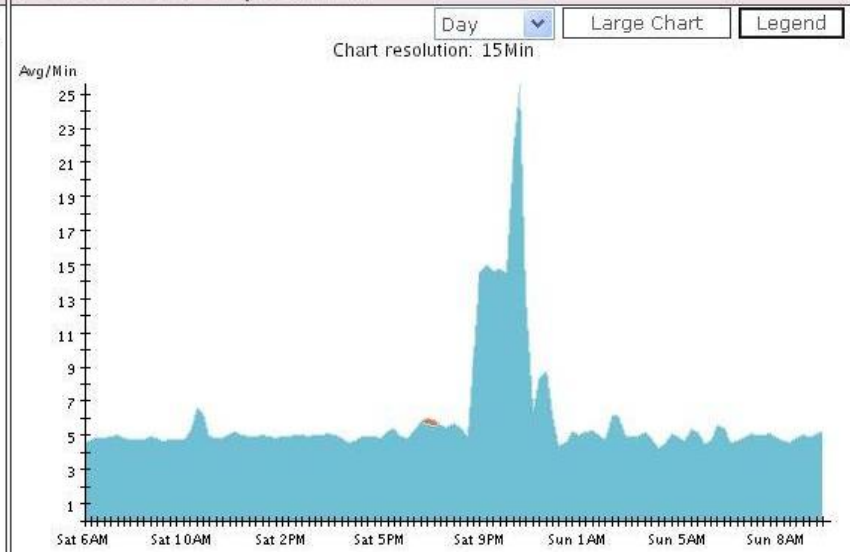

Activity: All Events and Netflow - Top Destination Ports, last 7d-0h

Color	Total Count	Value
Red	76,619	0 <a href="#">a</a>
Orange	34,719	80 <a href="#">a</a>
Yellow	33,397	53 <a href="#">a</a>
Light Green	26,451	2190 <a href="#">a</a>
Green	23,042	23 <a href="#">a</a>
Dark Green	21,766	123 <a href="#">a</a>
Light Blue	10,511	1026 <a href="#">a</a>
Dark Blue	8,687	1027 <a href="#">a</a>
Purple	6,645	138 <a href="#">a</a>
Dark Purple	4,971	135 <a href="#">a</a>

This straightforward view selects the Top N values for display by calculating the summed total of each value in the time range, and picking those with the largest total.

False Positive Events, last 1d-0h

Color	Description	All-Time Total
Orange	Unconfirmed false positives	10
Green	System confirmed false positives	6
Light Blue	Logged-to-DB-only events	74,915
Purple	Dropped events	0

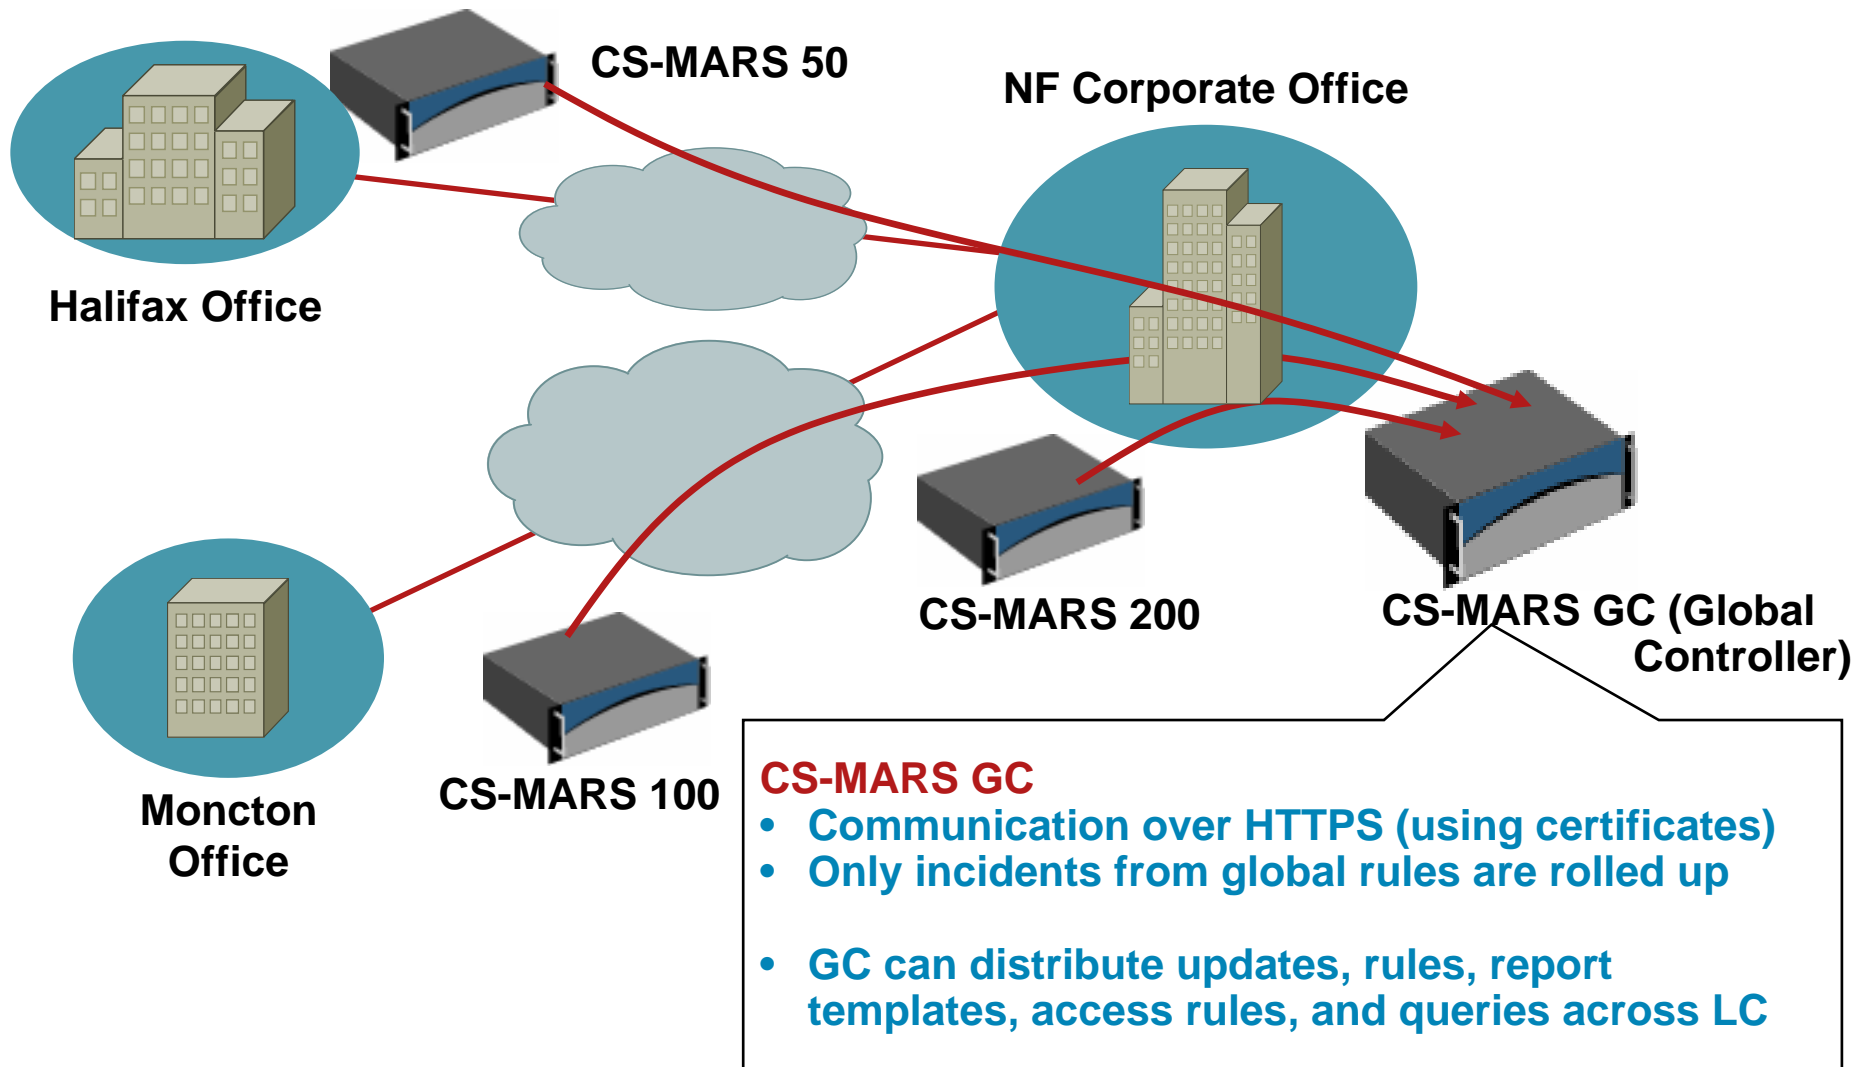

# CS-MARS Appliances

# CS-MARS Appliance Overview

# CS-MARS Deployment

# CS-MARS Summary

## Better

- Integrated Network Intelligence
- Isolate attacker by MAC, switch port
- Stop attacks in progress
- Visualize attack path
- Security hardened OS and System
- Purpose-built redundant design

## Faster

- Pipelined in-memory event analysis
- Patent pending algorithms
- 10,000 EPS with full correlation (3-10x competition)
- Scalable, distributed event analysis architecture with CS-MARS Global Controller

## Less expensive

- Appliance packaging
- No hidden software/customization costs
- Simple licensing – no software agents
