

The Bug Search Tool is Live

[Bug Search Tool](#), the successor to Bug Toolkit, is ready for you to use on the [Cisco Support Website](#).

Developed in consultation with customers like you, this enhanced resource offers

- ❖ A streamlined interface to make bug searches easier
- ❖ New ways to research products and software releases for associated bug defects
- ❖ Improved bug watch features

Behind the scenes you'll see Cisco releasing bug information more quickly – and fixing existing bugs faster – to improve the quality of the bug data you see.

For a peek, check out the Bug Search [interactive tour](#), view the [Bug Search Tool Demo](#) with Christine Woods and Oli Wheeler. Or just try out [Bug Search Tool](#).

The image shows two screenshots of the Bug Search Tool interface with various annotations. The left screenshot is titled "Welcome to the Bug Search Tool" and the right is titled "Further Target Your Bug Search".

Left Screenshot: "Welcome to the Bug Search Tool"

- Annotation:** "Use this toolbar for common search actions." with an arrow pointing to the top toolbar.
- Annotation:** "Filter your search data." with an arrow pointing to the "Filter" dropdown menu.

Right Screenshot: "Further Target Your Bug Search"

- Annotation:** "Search by series, model, or PID." with an arrow pointing to the "Search For" dropdown menu.
- Annotation:** "Search by releases for your product." with an arrow pointing to the "Product Family" dropdown menu.
- Annotation:** "Did we miss something? Tell us so we can improve." with an arrow pointing to the "Feedback" link.
- Annotation:** "Quickly scan bug content." with an arrow pointing to the "View Details" link.
