stylingKey;\n    }\n  }\n\n**\n
Retrieve the `TStylingKey` for the template styling instruction.\n *\n * This is needed
since `hostBinding` styling instructions are inserted after the template\n * instruction. While the template instruction
needs to update the residual in `TNode` the\n * `hostBinding` instructions need to update the `TStylingKey` of the
template instruction because\n * the template

```

instruction is downstream from the `hostBindings` instructions.  
 \* @param tData `TData` where the linked list is stored.  
 \* @param tNode `TNode` for which the styling is being computed.  
 \* @param isClassBased `true` if `class` (`false` if `style`)  
 \* @return `TStylingKey` if found or `undefined` if not found.  
 \* \nfunction  
 getTemplateHeadTStylingKey(tData: TData, tNode: TNode, isClassBased: boolean): TStylingKey | undefined  
 {\n const bindings = isClassBased ? tNode.classBindings : tNode.styleBindings;\n if  
 (getTStylingRangeNext(bindings) === 0) {\n // There does not seem to be a styling instruction in the `template`.\n  
 return undefined;\n }\n return tData[getTStylingRangePrev(bindings)] as TStylingKey;\n}\n\n/\*\*\n \* Update the  
 `TStylingKey` of the first template instruction in `TNode`.\n \* \n \* Logically `hostBindings` styling instructions are  
 of lower priority than that of the template.\n \* However, they execute after the template styling instructions. This  
 means that they get inserted  
 \* in front of the template styling instructions.\n \* \n \* If we have a template styling  
 instruction and a new `hostBindings` styling instruction is  
 \* executed it means that it may need to steal static fields  
 from the template instruction. This  
 \* method allows us to update the first template instruction `TStylingKey` with  
 a new value.\n \* \n \* Assume:\n \* ```\n \* <div my-dir style="color: red" [style.color]="tmplExp"></div>\n \* \n \* @Directive({\n \* host: {\n \* 'style': 'width: 100px',\n \* '[style.color]': 'dirExp',\n \* } \n \* })\n \* class MyDir  
 {\n \* ```\n \* \n \* when `[style.color]="tmplExp"` executes it creates this data structure.\n \* ```\n \* [\n \* 'color',  
 'color', 'red', 'width', '100px'],\n \* ```\n \* \n \* The reason for this is that the template instruction does not know if there  
 are styling  
 \* instructions and must assume that there are none and must collect all of the static styling.\n \* (both  
 \* `color` and `width`)\n \* \n \*

When `[style.color]: 'dirExp',` executes we need to insert a new data into the linked list.  
 \* ```\n \* [\n \* 'color',  
 'width', '100px'], // newly inserted  
 \* [\n \* 'color', 'color', 'red', 'width', '100px'], // this is wrong  
 \* ```\n \* \n \* Notice  
 that the template statics is now wrong as it incorrectly contains `width` so we need to  
 \* update it like so:  
 \* ```\n \* [\n \* 'color', 'width', '100px'],\n \* [\n \* 'color', 'color', 'red'], // UPDATE  
 \* ```\n \* \n \* @param tData `TData` where  
 the linked list is stored.  
 \* @param tNode `TNode` for which the styling is being computed.

node.\n     */\n    COMMENT = 0b10,\n    }\n\n/**\n     * Stores DOM operations which need to be applied to update
DOM render tree due to changes in\n     * expressions.\n     */\n    * The basic idea is that `i18nExp` OpCodes capture
expression changes and update a change\n     * mask bit. (Bit 1 for expression 1, bit 2 for expression 2 etc..., bit 32 for

```

expression 32 and higher.) The OpCodes then compare its own change mask against the expression change mask to determine if the OpCodes should execute. NOTE: 32nd bit is special as it says 32nd or higher. This way if we have more than 32 bindings the code still works, but with lower efficiency. (it is unlikely that a translation

would have more than 32 bindings.) These OpCodes can be used by both the i18n block as well as ICU sub-block.

```

## Example
Assume
if (rf & RenderFlags.Update) {
  i18nExp(ctx.exp1); // If changed set mask bit 1
  i18nExp(ctx.exp2); // If changed set mask bit 2
  i18nExp(ctx.exp3); // If changed set mask bit 3
  i18nExp(ctx.exp4); // If changed set mask bit 4
  i18nApply(0); // Apply all changes by executing the OpCodes
}

We can assume that each call to `i18nExp` sets an internal `changeMask` bit depending on the index of `i18nExp`.

The following OpCodes represent:
<div i18n-title="pre">{exp1}in{exp2}post">
  // If `changeMask & 0b11` has changed then execute update OpCodes
  // has NOT changed then skip `8` values and start processing next OpCodes
  0b11, 8,
  // Concatenate
  `newValue = 'pre'+IView[bindIndex-4]+'in'+IView[bindIndex-3]+'post';
  // Update attribute: `elementAttribute(1, 'title', sanitizerFn(newValue));
  // The following OpCodes represent:
  <div i18n>Hello {exp3}!>
  // If `changeMask & 0b100` has changed then execute update OpCodes
  // has NOT changed then skip `4` values and start processing next OpCodes
  0b100, 4,
  // Concatenate `newValue = 'Hello ' + IView[bindIndex -2] + '!';
  // Update text: `IView[1].textContent = newValue;
  // The following OpCodes represent:
  <div i18n>{exp4, plural, ... }>
  // If `changeMask & 0b1000` has changed then execute update OpCodes
  // has NOT changed then skip `2` values and start processing next OpCodes
  0b1000, 2,
  // Concatenate `newValue = IView[bindIndex -1];
  // Switch ICU: `icuSwitchCase(IView[1], 0, newValue);
  0 << SHIFT_ICU | 1 << SHIFT_REF | IcuSwitch,
  // Note `changeMask & -1` is always true, so the IcuUpdate will always execute.
  -1, 1,
  // Update ICU: `icuUpdateCase(IView[1], 0);
  0 << SHIFT_ICU | 1 << SHIFT_REF | IcuUpdate,
  ];

```

for this is that the top level ICU need a `TNode` so that they are part of the render tree, but nested ICU's have no TNode, because we don't know ahead of time if the nested ICU is expressed (parent ICU may have selected a case which does not contain it.)

```

    @param tView Current `TView`.
    @param index Index where the value should be read from.
    ^\nextport function getTicu(tView: TView, index: number): Ticu|null {
    const value = tView.data[index] as null | Ticu | TicuContainerNode | string;
    if (value === null || typeof value === 'string') return null;

    if (ngDevMode && !(value.hasOwnProperty('tViews') || value.hasOwnProperty('currentCaseLViewIndex')))
    throw Error('We expect to get '\null'\Ticu'\TicuContainer', but got: ' + value);
    } // Here the `value.hasOwnProperty('currentCaseLViewIndex')` is a polymorphic read as it can be // either Ticu or TicuContainerNode. This is not ideal, but we still think it is OK because it // will be just two cases which fits into the browser inline cache (inline cache can take up to // 4)
    const ticu = value.hasOwnProperty('currentCaseLViewIndex') ? value as Ticu : (value as TicuContainerNode).value;
    ngDevMode && assertTicu(ticu);
    return ticu;
}

Store `Ticu` at a give `index`.
The `Ticu` can be stored either directly (if it is nested ICU) OR it is stored inside the `TicuContainer` if it is top level ICU.
The reason for this is that the top level ICU need a `TNode` so that they are part of the render tree, but nested ICU's have no TNode, because we don't know ahead of time if the nested ICU is expressed (parent ICU may have selected a case which does not contain it.)
@param tView Current `TView`.
@param index Index where the value should be stored at in `Tview.data`.
@param ticu The Ticu to store.
^\nextport function setTicu(tView: TView, index: number, ticu: Ticu): void {
const tNode = tView.data[index] as null | TicuContainerNode;
ngDevMode && assertEqual(
    tNode === null || tNode.hasOwnProperty('tViews'), true,
    'We expect to get '\null'\TicuContainer');
if (tNode === null) {
    tView.data[index] = ticu;
} else {
    ngDevMode && assertTNodeType(tNode, TNodeType.Icu);
    tNode.value = ticu;
}
}

Set `TNode.insertBeforeIndex` taking the `Array` into account.
See `TNode.insertBeforeIndex`.
^\nextport function setTNodeInsertBeforeIndex(tNode: TNode, index: number) {
ngDevMode && assertTNode(tNode);
let insertBeforeIndex = tNode.insertBeforeIndex;
if (insertBeforeIndex === null) {
setI18nHandling(getInsertInFrontOfRNodeWithI18n, processI18nInsertBefore);
insertBeforeIndex = tNode.insertBeforeIndex = [null!/* may be updated to number later */, index];
} else {
assertEqual(Array.isArray(insertBeforeIndex), true, 'Expecting array here');
(insertBeforeIndex as number[]).push(index);
}
}

Create `TNode.type=TNodeType.Placeholder` node.
See `TNodeType.Placeholder` for more information.
^\nextport function createTNodePlaceholder(
    tView: TView,
    previousTNodes: TNode[],
    index: number): TNode {
const tNode = createTNodeAtIndex(tView, index, TNodeType.Placeholder, null, null);
addTNodeAndUpdateInsertBeforeIndex(previousTNodes, tNode);
return tNode;
}

Returns current ICU case.
ICU cases are stored as index into the `Ticu.cases`.

At times it is necessary to communicate that the ICU case just switched and that next ICU update should update all bindings regardless of the mask. In such a case the we store negative numbers for cases which have just been switched. This function removes the negative flag.
^\nextport function getCurrentICUCaseIndex(ticu: Ticu, lView: LView) {
const currentCase: number|null = lView[ticu.currentCaseLViewIndex];
return currentCase === null ? currentCase : (currentCase < 0 ? ~currentCase : currentCase);

 * Keep track of which input bindings in `i18nExp` have changed.
 * This is used to efficiently update expressions in i18n only when the corresponding input has changed.
 * 1) Each bit represents which of the `i18nExp` has changed.
 * 2) There are 32 bits allowed in JS.
 * 3) Bit 32 is special as it is shared for all changes past 32. (In other words if you have more than 32 `i18nExp` then all changes past 32nd `i18nExp` will be mapped to same bit. This means that we may end up changing more than we need to. But i18n expressions with 32 bindings is rare so in practice it should not be an issue.)
 * let changeMask = 0b0;
 * Keeps track of which bit needs to be updated in `changeMask`
 * This value gets incremented on every call to `i18nExp`
 * let changeMaskCounter = 0;
 * Keep track of which input bindings in `i18nExp` have changed.
 * `setMaskBit` gets invoked by each call to `i18nExp`.
 * @param hasChange did `i18nExp` detect a change.

`@param`  
slotOffset the offset from binding root to the reserved slot
`n`
`*`
`@param pureFn` A pure function that takes binding  
values and builds an object or array
`n`
`*`
`@param exps` An array of binding values
`n`
`*`  
`@param thisArg` Optional calling context of pureFn
`n`
`*`
`@returns` Updated or cached value
`n`
`*`
`@codeGenApi`
`n`  
`*`
`export function pureFunctionV`
`(`
`slotOffset: number,`
`pureFn: (...v: any[]) => any,`
`exps: any[],`
`thisArg?: any):`  
`any {`
`n`
`return pureFunctionVInternal(getLView(), getBindingRoot(), slotOffset,`  
`pureFn, exps, thisArg);`
`n}`
`n`
`**`
`n`
`*`
`Results of a pure function invocation are stored in LView in a dedicated slot`  
that is initialized
`n`
`*`
`n`
`*`
`to NO_CHANGE. In rare situations a pure pipe might throw an exception on the very first`
`n`
`*`  
invocation and not produce any valid results. In this case LView would keep holding the NO\_CHANGE
`n`
`*`  
value. The NO\_CHANGE is not something that we can use in expressions / bindings thus we convert
`n`
`*`  
it to  
``undefined`.`
`n`
`*`

**Definition of what a template rendering function should look like for a component.**

```

export type ComponentTemplate<T> = {
  // Note: the ctx parameter is typed as T|U, as using only U would prevent a template with
  // e.g. ctx: {} from being assigned to ComponentTemplate<any> as TypeScript won't infer U = any
  // in that scenario. By including T this incompatibility is resolved.
  <U extends T>(rf: RenderFlags, ctx: T|U): void;
}

```

**Definition of what a view queries function should look like.**

```

export type ViewQueriesFunction<T> = <U extends T>(rf:
  RenderFlags, ctx: U) => void;

```

**Definition of what a content queries function should look like.**

```

export type ContentQueriesFunction<T> = <U extends T>(rf: RenderFlags, ctx: U, directiveIndex: number) => void;

```

**Flags passed into template functions to determine which blocks (i.e. creation, update) should be executed.**

Typically, a template runs both the creation block and the update block on initialization and subsequent runs only execute the update block. However, dynamically created views require that the creation block be executed separately from the update block (for backwards compat).

```

export const enum RenderFlags {
  // Whether to run the creation block (e.g. create elements and directives)
  Create = 0b01,
  // Whether to run the update block (e.g. refresh bindings)
  Update = 0b10
}

```

import { ModuleWithProviders, NgModule, Provider } from '@angular/core';
import { BrowserModule } from '@angular/platform-browser';
import { BROWSER_ANIMATIONS_PROVIDERS, BROWSER_NOOP_ANIMATIONS_PROVIDERS } from './providers';

Object used to configure the behavior of { @link BrowserAnimationsModule }

@publicApi
export interface BrowserAnimationsModuleConfig {
  /** Whether animations should be disabled. Passing this is identical to providing the `NoopAnimationsModule`, but it can be controlled based on a runtime value.
   *
   * @param disableAnimations? boolean;
   */
  disableAnimations?: boolean;
}

Exports `BrowserModule` with additional [dependency-injection providers](guide/glossary#provider) for use with animations. See [Animations](guide/animations).

@publicApi
@NgModule({
  exports: [BrowserModule],
  providers: BROWSER_ANIMATIONS_PROVIDERS,
})
export class BrowserAnimationsModule {
  /** Configures the module based on the specified object.
   *
   * @param config Object used to configure the behavior of the `BrowserAnimationsModule`.
   *
   * @see `BrowserAnimationsModuleConfig`
   *
   * @usageNotes
   * When registering the `BrowserAnimationsModule`, you can use the `withConfig` function as follows:
   *
   * ```
   * @NgModule({
   *   imports: [BrowserAnimationsModule.withConfig(config)]
   * })
   * class MyNgModule {
   *   ...
   *   static withConfig(config: BrowserAnimationsModuleConfig):
   *     ModuleWithProviders<BrowserAnimationsModule> {
   *     return {
   *       ngModule: BrowserAnimationsModule,
   *       providers: config.disableAnimations ? BROWSER_NOOP_ANIMATIONS_PROVIDERS :

```

```

    BROWSER_ANIMATIONS_PROVIDERS
    };
  }
}

```

Returns the set of [dependency-injection providers](guide/glossary#provider) to enable animations in an application. See [animations guide](guide/animations) to learn more about animations in Angular.

The function is useful when you want to enable animations in an application bootstrapped using the `bootstrapApplication` function. In this scenario there is no need to import the `BrowserAnimationsModule` NgModule at all, just add providers returned by this function to the `providers` list as show below.

```

bootstrapApplication(RootComponent, {
  providers: [
    provideAnimations()
  ]
});

```

The function is useful when you want to bootstrap an application using the `bootstrapApplication` function, but you need to disable animations (for example, when running tests).

```

bootstrapApplication(RootComponent, {
  providers: [
    provideNoopAnimations()
  ]
});

```

The function is useful when you want to bootstrap an application using the `bootstrapApplication` function, but you need to disable animations (for example, when running tests).

```

in app code.
return [...BROWSER_ANIMATIONS_PROVIDERS];

```

A null player that must be imported to allow disabling of animations.

```

@publicApi
@NgModule({
  exports: [BrowserModule],
  providers: BROWSER_NOOP_ANIMATIONS_PROVIDERS,
})
export class NoopAnimationsModule {
  /** Returns the set of [dependency-injection providers](guide/glossary#provider) to disable animations in an application. See [animations guide](guide/animations) to learn more about animations in Angular.
   *
   * @usageNotes
   * The function is useful when you want to bootstrap an application using the `bootstrapApplication` function, but you need to disable animations (for example, when running tests).
   *
   * ```
   * bootstrapApplication(RootComponent, {
   *   providers: [
   *     provideNoopAnimations()
   *   ]
   * });
   *
   * @publicApi
   * @developerPreview
   * export function provideNoopAnimations():

```

```

instance of an Angular application and renders a standalone component as the\n    * application's root component.
More information about standalone components can be found in [this\n    * guide](guide/standalone-components).\n

```

```

*\n * @usageNotes\n * The root component passed into this function *must* be a standalone one (should have the\n
* `standalone: true` flag in the `@Component` decorator config).\n *\n * ```typescript\n * @Component({\n * standalone: true,\n * template: 'Hello world!\n * })\n * class RootComponent {}\n *\n * const appRef: ApplicationRef = await bootstrapApplication(RootComponent);\n *\n * ```\n *\n * You can add the list of providers that should be available in the application injector by\n * specifying the `providers` field in an object passed as the second argument:\n *\n * ```typescript\n * await bootstrapApplication(RootComponent, {\n * providers: [\n * {provide: BACKEND_URL, useValue: 'https://yourdomain.com/api'}\n * ]\n * });\n *\n * ```\n *\n * The `importProvidersFrom` helper method can be used to collect all providers from any\n * existing NgModule (and transitively from all NgModules that it imports):\n *\n * ```typescript\n * await bootstrapApplication(RootComponent, {\n * providers: [\n * importProvidersFrom(SomeNgModule)\n * ]\n * });\n *\n * ```\n *\n * Note: the `bootstrapApplication` method doesn't include [Testability](api/core/Testability) by\n * default. You can add [Testability](api/core/Testability) by getting the list of necessary\n * providers using `provideProtractorTestingSupport()` function and adding them into the `providers`\n * array, for example:\n *\n * ```typescript\n * import {provideProtractorTestingSupport} from '@angular/platform-browser';\n *\n * await bootstrapApplication(RootComponent, {\n * providers: [provideProtractorTestingSupport()]\n * });\n *\n * ```\n *\n * @param rootComponent A reference to a standalone component that should be rendered.\n *\n * @param options Extra configuration for the bootstrap operation, see `ApplicationConfig` for\n * additional info.\n *\n * @returns A promise that returns an `ApplicationRef` instance once resolved.\n *\n * @publicApi\n * @developerPreview\n */\n\nexport function bootstrapApplication(\n rootComponent: Type<unknown>, options?: ApplicationConfig): Promise<ApplicationRef> {\n return\n internalCreateApplication({rootComponent, ...createProvidersConfig(options)});\n }\n\n/**\n * Create an instance of an Angular application without bootstrapping any components. This is useful\n * for the situation where one wants to decouple application environment creation (a platform and\n * associated injectors) from rendering components on a screen. Components can be subsequently\n * bootstrapped on the returned `ApplicationRef`.\n *\n * @param options Extra configuration for the application environment, see `ApplicationConfig` for\n * additional info.\n *\n * @returns A promise that returns an `ApplicationRef` instance once resolved.\n *\n * @publicApi\n * @developerPreview\n */\n\nexport function createApplication(options?: ApplicationConfig) {\n return\n internalCreateApplication(createProvidersConfig(options));\n }\n\nfunction createProvidersConfig(options?: ApplicationConfig) {\n return {\n appProviders: [\n ...BROWSER_MODULE_PROVIDERS,\n ...(options?.providers ?? []),\n ],\n platformProviders: INTERNAL_BROWSER_PLATFORM_PROVIDERS\n };\n }\n\n/**\n * Returns a set of providers required to setup [Testability](api/core/Testability) for an\n * application bootstrapped using the `bootstrapApplication` function. The set of providers is\n * needed to support testing an application with Protractor (which relies on the Testability APIs\n * to be present).\n *\n * @returns An array of providers required to setup Testability for an application and make it\n * available for testing using Protractor.\n *\n * @developerPreview\n */\n\nexport function provideProtractorTestingSupport(): Provider[] {\n // Return a copy to prevent changes to the original array in case any in-place\n // alterations are performed to the `provideProtractorTestingSupport` call results in app code.\n return [...TESTABILITY_PROVIDERS];\n }\n\nexport function initDomAdapter() {\n BrowserDomAdapter.makeCurrent();\n }\n\nexport function errorHandler(): ErrorHandler {\n return new ErrorHandler();\n }\n\nexport function _document(): any {\n // Tell ivy about the global document\n setDocument(document);\n return document;\n }\n\nexport const\n INTERNAL_BROWSER_PLATFORM_PROVIDERS: StaticProvider[] = [\n {provide: PLATFORM_ID, useValue: PLATFORM_BROWSER_ID},\n {provide: PLATFORM_INITIALIZER, useValue: initDomAdapter, multi: true},\n {provide: DOCUMENT, useFactory: _document, deps: []},\n ];\n\n/**\n * A factory function that returns a `PlatformRef` instance associated with browser service\n * providers.\n *\n * @publicApi\n * @developerPreview\n */\n\nexport const platformBrowser: (extraProviders?: StaticProvider[]) => PlatformRef =\n createPlatformFactory(platformCore, 'browser', INTERNAL_BROWSER_PLATFORM_PROVIDERS);\n\n

```

Internal marker to signal whether providers from the `BrowserModule` are already present in DI. This is needed to avoid loading `BrowserModule` providers twice. We can't rely on the `BrowserModule` presence itself, since the standalone-based bootstrap just imports `BrowserModule` providers without referencing the module itself.

```

@publicApi
export function makeStateKey<T = void>(key: string): StateKey<T> {
  return key as StateKey<T>;
}

A key value store that is transferred from the application on the server side to the application on the client side.
The `TransferState` is available as an injectable token.
On the client, just inject this token using DI and use it, it will be lazily initialized.
On the server it's already included if `renderApplication` function is used.
Otherwise, import the `ServerTransferStateModule` module to make the `TransferState` available.
The values in the store are serialized/deserialized using JSON.stringify/JSON.parse.
So only boolean, number, string, null and non-class objects will be serialized and deserialized in a non-lossy manner.

@publicApi

DomSanitizer helps preventing Cross Site Scripting Security bugs (XSS) by sanitizing values to be safe to use in the different DOM contexts. For example, when binding a URL in an <a [href]="someValue"> hyperlink, someValue will be sanitized so that an attacker cannot inject e.g. a javascript: URL that would execute code on the website. In specific situations, it might be necessary to disable sanitization, for example if the application genuinely needs to produce a javascript: style link with a dynamic value in it. Users can bypass security by constructing a value with one of the bypassSecurityTrust... methods, and then binding to that value from the template. These situations should be very rare, and extraordinary care must be taken to avoid creating a Cross Site Scripting (XSS) security bug!

When using bypassSecurityTrust..., make sure to call the method as early as possible and as close as possible to the source of the value, to make it easy to verify no security bug is created by its use. It is not required (and not recommended) to bypass security if the value is safe, e.g. a URL that does not start with a suspicious protocol, or an HTML snippet that does not contain dangerous code. The sanitizer leaves safe values intact.

@security Calling any of the bypassSecurityTrust... APIs disables Angular's built-in sanitization for the value passed in. Carefully check and audit all values and code paths going into this call. Make sure any user data is appropriately escaped for this security context. For more detail, see the [Security Guide](https://g.co/ng/security).

  /**
   * Exercises change detection in a loop and then prints the average amount of
   * time in milliseconds
   * how long a single round of change detection takes for
   * the current state of the UI. It runs a minimum of 5 rounds for a minimum
   * of 500 milliseconds.
   * Optionally, a user may pass a `config` parameter containing a map of
   * options. Supported options are:
   * `record` (boolean) - causes the profiler to record a CPU profile while
   * it exercises the change detector. Example:
   *
   * ng.profiler.timeChangeDetection({record: true})
   *
   * timeChangeDetection(config: any): ChangeDetectionPerfRecord {
   *   const record = config && config['record'];
   *   const profileName = 'Change Detection';
   *   // Profiler is not available in Android browsers without dev tools opened
   *   const isProfilerAvailable = window.console.profile != null;
   *   if (record && isProfilerAvailable) {
   *     window.console.profile(profileName);
   *   }
   *   const start = performanceNow();
   *   let numTicks = 0;
   *   while (numTicks < 5 || (performanceNow() - start) < 500) {
   *     this.appRef.tick();
   *     numTicks++;
   *   }
   *   const end = performanceNow();
   *   if (record && isProfilerAvailable) {
   *     window.console.profileEnd(profileName);
   *   }
   *   const msPerTick = (end - start) / numTicks;
   *   window.console.log(`ran ${numTicks} change detection cycles`);
   *   window.console.log(`${msPerTick.toFixed(2)} ms per check`);
   *   return new ChangeDetectionPerfRecord(msPerTick, numTicks);
   * }
  }

```

```

* found in the LICENSE file at https://angular.io/license\n *\n\nimport {Directive, ElementRef, InjectionToken,
Renderer2} from '@angular/core';\n\n/**\n * @description\n * Defines an interface that acts as a bridge between the
Angular forms API and a\n * native element in the DOM.\n *\n * Implement this interface to create a custom form
control directive\n * that integrates with Angular forms.\n *\n * @see DefaultValueAccessor\n *\n * @publicApi\n *\n\nexport interface ControlValueAccessor {\n /**\n * @description\n * Writes a new value to the element.\n *\n * This method is called by the forms API to write to the view when programmatic\n * changes from model to
view are requested.\n *\n * @usageNotes\n * ### Write a value to the element\n *\n * The following example
writes a value to the native DOM element.\n *\n * ```ts\n * writeValue(value: any): void {\n *
this._renderer.setProperty(this._elementRef.nativeElement, 'value', value);\n * }\n * ```\n
*\n * @param obj The new value for the element\n *\n writeValue(obj: any): void;\n\n /**\n *
*\n * @description\n * Registers a callback function that is called when the control's value\n * changes in the UI.\n
*\n * This method is called by the forms API on initialization to update the form\n * model when values
propagate from the view to the model.\n *\n * When implementing the `registerOnChange` method in your own
value accessor,\n * save the given function so your class calls it at the appropriate time.\n *\n * @usageNotes\n
* ### Store the change function\n *\n * The following example stores the provided function as an internal
method.\n *\n * ```ts\n * registerOnChange(fn: (_: any) => void): void {\n * this._onChange = fn;\n * }\n
*\n * When the value changes in the UI, call the registered\n * function to allow the forms API to update
itself:\n *\n * ```ts\n * host: {\n * '(change)': '_onChange($event.target.value)\n
*\n * }\n * ```\n *\n * @param fn The callback function to register\n *\n registerOnChange(fn: any): void;\n\n
/**\n * @description\n * Registers a callback function that is called by the forms API on initialization\n * to
update the form model on blur.\n *\n * When implementing `registerOnTouched` in your own value accessor,
save the given\n * function so your class calls it when the control should be considered\n * blurred or
`'touched'`.\n *\n * @usageNotes\n * ### Store the callback function\n *\n * The following example stores
the provided function as an internal method.\n *\n * ```ts\n * registerOnTouched(fn: any): void {\n *
this._onTouched = fn;\n * }\n * ```\n *\n * On blur (or equivalent), your class should call the registered
function to allow\n * the forms API to update itself:\n *\n * ```ts\n * host: {\n * '(blur)': '_onTouched()'\n
*\n * }\n * ```\n *\n * @param fn The callback function to register\n
*\n registerOnTouched(fn: any): void;\n\n /**\n * @description\n * Function that is called by the forms API
when the control status changes to\n * or from 'DISABLED'. Depending on the status, it enables or disables the\n
* appropriate DOM element.\n *\n * @usageNotes\n * The following is an example of writing the disabled
property to a native DOM element:\n *\n * ```ts\n * setDisabledState(isDisabled: boolean): void {\n *
this._renderer.setProperty(this._elementRef.nativeElement, 'disabled', isDisabled);\n * }\n * ```\n *\n * @param
isDisabled The disabled status to set on the element\n *\n setDisabledState?(isDisabled: boolean):
void;\n\n /**\n * Base class for all ControlValueAccessor classes defined in Forms package.\n * Contains
common logic and utility functions.\n *\n * Note: this is an *internal-only* class and should not be extended or used
directly in\n * applications code.\n *\n @Directive()\n\nexport class BaseControlValueAccessor
{\n /**\n * The registered callback function called when a change or input event occurs on the input\n *
element.\n * @nodoc\n *\n onChange = (_: any) => {};\n\n /**\n * The registered callback function called
when a blur event occurs on the input element.\n * @nodoc\n *\n onTouched = () => {};\n\n constructor(private

```

CVAs can be found). We use this class to distinguish between default CVA, built-in CVAs and custom CVAs, so that Forms logic can recognize built-in CVAs and treat custom ones with higher priority (when both built-in and custom CVAs are present). Note: this is an internal-only class and should not be extended or used directly in applications code.

```

*\n */\n\nexport const NG_VALIDATORS = new InjectionToken<Array<Validator|Function>>('NgValidators');\n\n/**\n *
@description\n * An `InjectionToken` for registering additional asynchronous validators used with\n *
`AbstractControl`s.\n * @see `NG_VALIDATORS`\n * @usageNotes\n * ### Provide a custom async
validator directive\n * The following example implements the `AsyncValidator` interface to create an\n * async
validator directive with a custom error key.\n * ```typescript\n * @Directive({\n * selector:
'[customAsyncValidator]',\n * providers: [{provide: NG_ASYNC_VALIDATORS, useExisting:

```

```

CustomAsyncValidatorDirective, multi: true}}) class CustomAsyncValidatorDirective implements
AsyncValidator {
  validate(control: AbstractControl): Promise<ValidationErrors|null> {
    return
    Promise.resolve({'custom': true});
  }
}
export const NG_ASYNC_VALIDATORS = [
  new
  InjectionToken<Array<Validator|Function>>('NgAsyncValidators'),
  {
    provide: AsyncValidator,
    useValue: new NgAsyncValidator(),
    multi: true,
  },
]
}
}

A regular expression that matches
valid e-mail addresses.
At a high level, this regexp matches e-mail addresses of the format `local-part@tld`,
where:
- `local-part` consists of one or more of the allowed characters (alphanumeric and some
punctuation
symbols).
- `local-part` cannot begin or end with a period (.).
- `local-part` cannot be longer than 64
characters.
- `tld` consists of one or more `labels` separated by periods (.). For example `localhost` or
`foo.com`.
- A `label` consists of one or more of the allowed characters (alphanumeric, dashes (-) and
periods (.)).
- A `label` cannot begin or end with a dash (-) or a period (.).
- A `label` cannot be longer
than 63 characters.
- The whole address cannot be longer than 254 characters.
## Implementation
background
This regexp was ported over from AngularJS (see there for git history):
https://github.com/angular/angular.js/blob/c133ef836/src/ng/directive/input.js#L27
It is based on the
[WHATWG version](https://html.spec.whatwg.org/multipage/input.html#valid-e-mail-address) with
some
enhancements to incorporate more RFC rules (such as rules related to domain names and the
lengths of different
parts of the address). The main differences from the WHATWG version are:
- Disallow `local-part` to begin or
end with a period (.).
- Disallow `local-part` length to exceed 64 characters.
- Disallow total address
length to exceed 254 characters.
See [this commit](https://github.com/angular/angular.js/commit/f3f5cf72e)
for more details.
const EMAIL_REGEXP = /^(?=.{1,254}$)(?=.{1,64}@)[a-zA-Z0-9!#$%&'*/+=?^_{|}~-]+(?:\[a-zA-Z0-9!#$%&'*/+=?^_{|}~-]+\)*@[a-zA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?(\.?[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?*$;

* @description
Provides a set of built-in validators that can be used by form controls.
A validator is a
function that processes a `FormControl` or collection of
controls and returns an error map or null. A null map
means that validation has passed.
* @see [Form Validation](/guide/form-validation)
* @publicApi
export class Validators {
  * @description
Validator that requires the control's value to be greater
than or equal to the provided number.
* @usageNotes
### Validate against a minimum of 3
typescript
const control = new FormControl(2, Validators.min(3));
console.log(control.errors); // {min: {min: 3, actual: 2}}
* @returns
A validator function that
returns an error map with the
`min` property if the validation check fails, otherwise `null`.
* @see
`updateValueAndValidity()`
static min(min:
number): ValidatorFn {
  return minValidator(min);
}
}
* @description
Validator that requires
the control's value to be less than or equal to the provided number.
* @usageNotes
### Validate
against a maximum of 15
typescript
const control = new FormControl(16, Validators.max(15));
console.log(control.errors); // {max: {max: 15, actual: 16}}
* @returns
A validator function
that returns an error map with the
`max` property if the validation check fails, otherwise `null`.
* @see
`updateValueAndValidity()`
static max(max: number): ValidatorFn {
  return maxValidator(max);
}
}
* @description
Validator that requires the control have a non-empty value.
* @usageNotes
### Validate that the field is non-empty
typescript
const control = new
FormControl("", Validators.required);
console.log(control.errors);
// {required: true}
* @returns
An error map with the `required` property
if the validation
check fails, otherwise `null`.
* @see
`updateValueAndValidity()`
static required(control:
AbstractControl): ValidationErrors|null {
  return requiredValidator(control);
}
}
* @description
Validator that requires the control's value be true. This validator is commonly
used for required checkboxes.
* @usageNotes
### Validate that the field value is true
typescript
const control =
new FormControl('some value', Validators.requiredTrue);
console.log(control.errors); // {required: true}
* @returns
An error map that contains the `required` property
set to `true` if the validation check
fails, otherwise `null`.
* @see
`updateValueAndValidity()`
static requiredTrue(control:

```

AbstractControl): ValidationErrors|null

```
{\n  return requiredTrueValidator(control);\n }\n\n /**\n  * @description\n  * Validator that requires the control's value pass an email validation test.\n  *\n  * Tests the value using a [regular\n  * expression](https://developer.mozilla.org/en-US/docs/Web/JavaScript/Guide/Regular_Expressions)\n  * pattern suitable for common use cases. The pattern is based on the definition of a valid email\n  * address in the [WHATWG HTML\n  * specification](https://html.spec.whatwg.org/multipage/input.html#valid-e-mail-address)\n  * with\n  * some enhancements to incorporate more RFC rules (such as rules related to domain names and the\n  * lengths of different parts of the address).\n  *\n  * The differences from the WHATWG version include:\n  * - Disallow `local-part` (the part before the `@` symbol) to begin or end with a period (`.`).\n  * - Disallow `local-part` to be longer than 64 characters.\n  * - Disallow the whole address to be longer than 254 characters.\n  *\n  * If this pattern does not satisfy your business needs, you can use `Validators.pattern()` to\n  * validate the value against a different pattern.\n  *\n  * @usageNotes\n  * \n  * ### Validate that the field matches a valid email pattern\n  * \n  * ```typescript\n  * const control = new FormControl('bad@', Validators.email);\n  * \n  * console.log(control.errors); // {email: true}\n  * ```\n  *\n  * @returns An error map with the `email` property\n  * if the validation check fails, otherwise `null`.\n  *\n  * @see `updateValueAndValidity()`\n  *\n  * /\n  * static email(control: AbstractControl): ValidationErrors|null {\n  *   return emailValidator(control);\n  * }\n  * }\n  * }\n  * \n  * @description\n  * Validator that requires the length of the control's value to be greater than or equal\n  * to the provided minimum length. This validator is also provided by default if you use the\n  * the HTML5 `minlength` attribute. Note that the `minLength` validator is intended to be used\n  * \n  * only for types that have a numeric `length` property, such as strings or arrays. The\n  * `minLength` validator logic is also not invoked for values when their `length` property is 0\n  * (for example in case of an empty string or an empty array), to support optional controls. You\n  * can use the standard `required` validator if empty values should not be considered valid.\n  *\n  * @usageNotes\n  * \n  * ### Validate that the field has a minimum of 3 characters\n  * \n  * ```typescript\n  * const control = new FormControl('ng', Validators.minLength(3));\n  * \n  * console.log(control.errors); // {minlength: {requiredLength: 3, actualLength: 2}}\n  * ```\n  *\n  * html\n  * <input minlength="5">\n  * \n  * @returns A validator function that returns an error map with the\n  * `minlength` property if the validation check fails, otherwise `null`.\n  *\n  * @see `updateValueAndValidity()`\n  *\n  * /\n  * static minLength(minLength: number): ValidatorFn\n  * {\n  *   return minLengthValidator(minLength);\n  * }\n  * }\n  * }\n  * \n  * @description\n  * Validator that requires the length of the control's value to be less than or equal\n  * to the provided maximum length. This validator is also provided by default if you use the\n  * the HTML5 `maxlength` attribute. Note that the `maxLength` validator is intended to be used\n  * only for types that have a numeric `length` property, such as strings or arrays.\n  *\n  * @usageNotes\n  * \n  * ### Validate that the field has maximum of 5 characters\n  * \n  * ```typescript\n  * const control = new FormControl('Angular', Validators.maxLength(5));\n  * \n  * console.log(control.errors); //\n  * {maxlength: {requiredLength: 5, actualLength: 7}}\n  * ```\n  *\n  * html\n  * <input maxlength="5">\n  * \n  * @returns A validator function that returns an error map with the\n  * `maxlength` property if the validation check fails, otherwise `null`.\n  *\n  * @see `updateValueAndValidity()`\n  *\n  * /\n  * static maxLength(maxLength: number): ValidatorFn {\n  *   return maxLengthValidator(maxLength);\n  * }\n  * }\n  * }\n  * \n  * @description\n  * Validator that requires the control's value to match a regex pattern. This validator is also\n  * provided by default if you use the HTML5 `pattern` attribute.\n  *\n  * @usageNotes\n  * \n  * ### Validate that the field only contains letters or spaces\n  * \n  * ```typescript\n  * const control = new FormControl('1', Validators.pattern('[a-zA-Z ]*')); \n  * \n  * console.log(control.errors); // {pattern:\n  * {requiredPattern: '^([a-zA-Z ]*$)', actualValue: '1'}}\n  * ```\n  *\n  * html\n  * <input pattern="[a-zA-Z ]*">\n  * \n  * ### Pattern matching with the global or sticky flag\n  * \n  * `RegExp` objects created with the `g` or `y` flags that are passed into `Validators.pattern`\n  * can produce different results on the same input when validations are run consecutively. This is\n  * due to how the behavior of `RegExp.prototype.test` is\n  * specified in [ECMA-262](https://tc39.es/ecma262/#sec-regexpbuiltinexec)\n  * (`RegExp` preserves the index of the last match when the global or sticky flag is used).\n  * \n  * Due to this behavior, it
```

is recommended that when using `Validators.pattern`` you **do not** pass in a `RegExp`` object with either the global or sticky `flag`` enabled.

```

typescript // Not recommended (since the `g` flag is used)
const controlOne = new FormControl('1', Validators.pattern(/foo/g)); // Good
const controlTwo = new FormControl('1', Validators.pattern(/foo/));
`
@param pattern A regular expression to be used as is to test the values, or a string.
If a string is passed, the `^` character is prepended and the `$` character is appended to the provided string (if not already present), and the resulting regular expression is used to test the values.
@returns A validator function

```

```

that returns an error map with the `pattern` property if the validation check fails, otherwise `null`.
@see `updateValueAndValidity()`
static pattern(pattern: string|RegExp): ValidatorFn {
  return patternValidator(pattern);
}
`
description Validator that performs no operation.
@see `updateValueAndValidity()`
static nullValidator(control: AbstractControl): ValidationErrors|null {
  return nullValidator(control);
}
`
description Compose multiple validators into a single function that returns the union of the individual error maps for the provided control.
@returns A validator function that returns an error map with the merged error maps of the validators if the validation check fails, otherwise `null`.
@see `updateValueAndValidity()`
static compose(validators: null): null;
static compose(validators: (ValidatorFn|null|undefined)[]):

```

```

ValidatorFn|null;
static compose(validators: (ValidatorFn|null|undefined)[]|null): ValidatorFn|null {
  return compose(validators);
}
`
description Compose multiple async validators into a single function that returns the union of the individual error objects for the provided control.
@returns A validator function that returns an error map with the merged error objects of the async validators if the validation check fails, otherwise `null`.
@see `updateValueAndValidity()`
static composeAsync(validators: (AsyncValidatorFn|null)[]): AsyncValidatorFn|null {
  return composeAsync(validators);
}
}
`

directive
and pass it an existing FormGroup instance (you can create one in your class).
Example:
`);
}
```

```

${formArrayNameExample});\n\n\nexport const disabledAttrWarning = `
It looks like you're using the disabled
attribute with a reactive form directive. If you set disabled to true
when you set up this control in your component
class, the disabled attribute will actually be set in the DOM for
you. We recommend using this approach to avoid
'changed after checked' errors.
Example:
// Specify the `disabled` property at control creation time:
form
= new FormGroup({
  first: new FormControl({ value: 'Nancy', disabled: true }, Validators.required),
  last: new
  FormControl('Drew', Validators.required)
});
// Controls can also be enabled/disabled after creation:
form.get('first').enable();
form.get('last').disable();
`;
\n\n\nexport const
asyncValidatorsDroppedWithOptsWarning = `
It looks like you're constructing using a FormControl with both an
options argument and an
async validators argument. Mixing these arguments will cause your async validators to
be dropped. You should either put all your validators in the options object, or in separate validators
arguments.
For example:
// Using validators arguments
fc = new FormControl(42, Validators.required,
myAsyncValidator);
// Using AbstractControlOptions
fc = new FormControl(42, { validators:
Validators.required, asyncValidators: myAV });
// Do NOT mix them: async validators will be dropped!
fc =
new FormControl(42, { validators: Validators.required },
/* Oops! */ myAsyncValidator);
`;
\n\n\nexport function ngModelWarning(directiveName: string): string {\n return
`\n It looks like you're using ngModel on the same form field as ${directiveName}.
Support for using the
ngModel input property and ngModelChange event with
reactive form directives has been deprecated in Angular
v6 and will be removed
in a future version of Angular.

    * ^\nexport
    * Value gives the value type corresponding to a control type.
    * ^\n * Note that the resulting type will follow the same rules as `value` on your control, group, or
    * array, including `undefined` for each group element which might be disabled.
    * ^\n * If you are trying to extract a value type for a data model, you probably want { @link RawValue },
    * which will not have `undefined` in group keys.
    * @usageNotes
    * ### `FormControl` value type
    * You can extract the value type of a single control:
    * type NameControl = FormControl<string>;
    * type NameValue = Value<NameControl>;
    * The resulting type is `string`.
    * ### `FormGroup` value type
    * Imagine you have an interface defining the controls in your group. You can extract the shape of
  
```

```

* the values as follows:\n *\n * ``\n * interface PartyFormControls {\n *   address: FormControl<string>;\n * }\n *\n * // Value operates on controls; the object must be wrapped in a FormGroup.\n * type PartyFormValues =\n * Value<FormGroup<PartyFormControls>>;\n *\n * The resulting type is `{address: string|undefined}`.\n *\n * ### `FormArray` value type\n *\n * You can extract values from FormArrays as well:\n *\n * ``\n * type\n * GuestNamesControls = FormArray<FormControl<string>>;\n *\n * type NamesValues =\n * Value<GuestNamesControls>;\n *\n * ``\n *\n * The resulting type is `string[]`.\n *\n * ***Internal: not for public use.***\n *\n * `export type Value<T extends AbstractControl|undefined> = T extends AbstractControl<any, any>? T['value'] : never;\n *\n * `RawValue` gives the raw value type corresponding to a control type.\n *\n * Note that the resulting type will follow the same rules as `.getRawValue()` on your control, group, or array. This means that all controls inside a group will be required, not optional, regardless of their disabled state.\n *\n * You may also wish to use `{ @link Value }`, which will have `undefined` in group keys (which can be disabled).\n *\n * @usageNotes\n *\n * ### `FormGroup` raw value type\n *\n * Imagine you have an interface defining the controls in your group. You can extract the shape of the raw values as follows:\n *\n * ``\n * interface PartyFormControls {\n *   address: FormControl<string>;\n * }\n *\n * // RawValue operates on controls; the object must be wrapped in a FormGroup.\n * type PartyFormValues = RawValue<FormGroup<PartyFormControls>>;\n *\n * ``\n *\n * The resulting type is `{address: string}`. (Note the absence of `undefined`.)\n *\n * ***Internal: not for public use.***\n *\n * `export type RawValue<T extends AbstractControl|undefined> = T extends AbstractControl<any, any>?\n * (T['setValue'] extends ((v: infer R) => void) ? R : never) : never;\n *\n * // Disable clang-format to produce clearer formatting for these multiline types.\n *\n * // clang-format off\n *\n * `_tokenize` splits a string literal S by a delimiter D.\n *\n * `export type Tokenize<S extends string, D extends string> =\n * string extends S ? string[] : /* S must be a literal */\n * S extends `${infer T}${D}${infer U}` ? [T, ...Tokenize<U, D>] : [S] ;\n *\n * // Base case\n *\n * ;\n *\n * `CoerceStrArrToNumArr` accepts an array of strings, and converts any numeric string to a number.\n *\n * `export type CoerceStrArrToNumArr<S> =\n * // Extract the head of the array.\n * S extends [infer Head, ...infer Tail] ?\n * // Using a template literal type, coerce the head to `number` if possible.\n * // Then, recurse on the tail.\n * Head extends `${number}` ?\n * [number, ...CoerceStrArrToNumArr<Tail>] :\n * [Head, ...CoerceStrArrToNumArr<Tail>] ;\n *\n * `Navigate` takes a type T and an array K, and returns the type of T[K[0]][K[1]][K[2]]...\n *\n * `export type Navigate<T, K extends (Array<string|number>)> =\n * T extends object ? /* T must be indexable (object or array) */\n * (K extends [infer Head, ...infer Tail] ? /* Split K into head and tail */\n * (Head extends keyof T ? /* head(K) must index T */\n * (Tail extends (string|number)[] ? /* tail(K) must be an array */\n * [] extends Tail ? T[Head] : /* base case: K can be split, but Tail is empty */\n * (Navigate<T[Head], Tail>) /* explore T[head(K)] by tail(K) */\n * any) /* tail(K) was not an array, give up */\n * :never) /* head(K) does not index T, give up */\n * :any) /* K cannot be split, give up */\n * :any /* T is not indexable, give up */\n * ;\n *\n * `Writeable` removes readonly from all keys.\n *\n * `export type Writeable<T> =\n * {\n *   -readonly[P in keyof T]: T[P];\n * }\n *\n * `GetProperty` takes a type T and some property names or indices K.\n *\n * If K is a dot-separated string, it is tokenized into an array before proceeding.\n *\n * Then, the type of the nested property at K is computed: T[K[0]][K[1]][K[2]]...\n *\n * This works with both objects, which are indexed by property name, and arrays, which are indexed numerically.\n *\n * For internal use only.\n *\n * `export type GetProperty<T, K> =\n * // K is a string\n * K extends string ? GetProperty<T, CoerceStrArrToNumArr<Tokenize<K, '.'>>> :\n * // Is is an array\n * Writeable<K> extends Array<string|number> ?\n * Navigate<T, Writeable<K>> :\n * // Fall through permissively if we can't calculate the type of K.\n * any;\n *\n * // clang-format on\n *\n * // ***\n *\n * This is the base class for `FormControl`, `FormGroup`, and `FormArray`.\n *\n * It provides some of the shared behavior that all controls and groups of controls have, like running validators, calculating status, and resetting state. It also defines the properties that are shared between all sub-classes, like `value`, `valid`, and `dirty`. It shouldn't be instantiated directly.\n *\n * The first type parameter T Value represents the value type of the control (control.value).\n *\n * The optional type parameter TRawValue represents the raw value type

```

Retrieves a child control given the control's name or path.\n  *\n  * @param path A dot-delimited string or array of
string/number values that define the path to the\n  * control. If a string is provided, passing it as a
string literal will result in improved type\n  * information. Likewise, if an array is provided, passing it `as const`
will cause improved type\n  * information to be available.\n  *\n  * @usageNotes\n  * ### Retrieve a nested
control\n  * * For example, to get a `name` control nested within a `person` sub-group:\n  * *
`\n  * this.form.get('person.name');`\n  * * -OR-\n  * *
`\n  * this.form.get(['person', 'name'] as const);` // `as const`
gives improved typings\n  * * ### Retrieve a control in a FormArray\n  * * When accessing an element
inside a FormArray, you can use an element index.\n  * * For example, to get a `price` control from the first element
in an `items` array you can use:\n  * *
`\n  * this.form.get('items.0.price');`\n  * * -OR-\n  * *
`\n  * this.form.get(['items', 0, 'price']);`\n  */\n  get<P extends string|((string | number)[])>(path: P):\n
AbstractControl<GetProperty<TRawValue, P>>|null {\n    let currPath: Array<string|number>|string
= path;\n    if (currPath === null) return null;\n    if (!Array.isArray(currPath)) currPath = currPath.split('.');\n
if (currPath.length === 0) return null;\n    return currPath.reduce(\n      (control: AbstractControl|null, name) =>
control && control._find(name), this);\n  }\n\n /**\n  * @description\n  * Reports error data for the control with
the given path.\n  *\n  * @param errorCode The code of the error to check\n  * @param path A list of control
names that designates how to move from the current control\n  * to the control that should be queried for errors.\n
*\n  * @usageNotes\n  * For example, for the following `FormGroup`:\n  * * ```\n  * form = new
FormGroup({\n  *   address: new FormGroup({ street: new FormControl() })\n  * });\n  * ```\n  * * The path to

```

the 'street' control from the root form would be 'address' -> 'street'.  
It can be provided to this method in one of two formats:  
1. An array of string control names, e.g. ['address', 'street']  
1. A period-delimited list of control names in one string, e.g. 'address.street'  
@returns error data for that particular error. If the control or error is not present, null is returned.

```
getError(errorCode: string, path?: Array<string|number>|string): any {  
    const control = path ? this.get(path) : this;  
    return control && control.errors ? control.errors[errorCode] : null;  
}  
/**  
 * @description  
 * Reports whether the control with the given path has the error specified.  
 * @param errorCode The code of the error to check  
 * @param path A list of control names that designates how to move from the current control to the control that should be queried for errors.  
 * @usageNotes  
 * For example, for the following  
`FormGroup`:  
` ` form = new FormGroup({  
 ` address: new FormGroup({  
 ` street: new FormControl() })  
 ` });  
` ` The path  
to the 'street' control from the root form would be 'address' -> 'street'.  
It can be provided to this method in one of two formats:  
1. An array of string control names, e.g. ['address', 'street']  
1. A period-delimited list of control names in one string, e.g. 'address.street'  
If no path is given, this method checks for the error on the current control.  
@returns whether the given error is present in the control at the given path.  
If the control is not present, false is returned.
```

```
hasError(errorCode: string, path?: Array<string|number>|string): boolean {  
    return !!this.getError(errorCode, path);  
}

type OptionalKeys<T> = {\n [K in keyof T] -?: undefined extends T[K] ? K : never\n}[keyof T];\n\n/**\n * Tracks
the value and validity state of a group of `FormControl` instances.\n *\n * A `FormGroup` aggregates the values of
each child `FormControl` into one object,\n * with each control name as the key. It calculates its status by reducing
the status values\n * of its children. For example, if one of the controls
in a group is invalid, the entire\n * group becomes invalid.\n *\n * `FormGroup` is one of the four fundamental
building blocks used to define forms in Angular,\n * along with `FormControl`, `FormArray`, and `FormRecord`.\n
*\n * When instantiating a `FormGroup`, pass in a collection of child controls as the first\n * argument. The key for
each child registers the name for the control.\n *\n * `FormGroup` is intended for use cases where the keys are
known ahead of time.\n * If you need to dynamically add and remove controls, use {@link FormRecord} instead.\n
*\n * `FormGroup` accepts an optional type parameter `TControl`, which is an object type with inner\n * control
types as values.\n *\n * @usageNotes\n *\n * ### Create a form group with 2 controls\n *\n * ```\n * const form =
new FormGroup({\n * first: new FormControl('Nancy', Validators.minLength(2)),\n * last: new
FormControl('Drew'),\n * });\n *\n * console.log(form.value); // {first: 'Nancy', last: 'Drew'}\n *\n *
console.log(form.status);
// 'VALID'\n *\n * ### The type argument, and optional controls\n *\n * `FormGroup` accepts one generic
argument, which is an object containing its inner controls.\n * This type will usually be inferred automatically, but
you can always specify it explicitly if you\n * wish.\n * If you have controls that are optional (i.e. they can be
removed, you can use the `?` in the\n * type):\n *\n * ```\n * const form = new FormGroup<{\n * first:
FormControl<string|null>,\n * middle?: FormControl<string|null>, // Middle name is optional.\n * last:
FormControl<string|null>,\n * }>({\n * first: new FormControl('Nancy'),\n * last: new FormControl('Drew'),\n *
});\n *\n * ```\n *\n * ### Create a form group with a group-level validator\n *\n * You include group-level validators as
the second arg, or group-level async\n * validators as the third arg. These come in handy when you want to perform
validation\n * that considers the value of more than one child control.\n
*\n * ```\n * const form = new FormGroup({\n * password: new FormControl("", Validators.minLength(2)),\n *
passwordConfirm: new FormControl("", Validators.minLength(2)),\n * }, passwordMatchValidator);\n *\n * \n *\n * function passwordMatchValidator(g: FormGroup) {\n * return g.get('password').value ===
g.get('passwordConfirm').value\n * ? null : {'mismatch': true};\n * }\n *\n * ```\n *\n * Like `FormControl`
instances, you choose to pass in\n * validators and async validators as part of an options object.\n *\n * ```\n * const
form = new FormGroup({\n * password: new FormControl(""),\n * passwordConfirm: new FormControl(""),\n * }, {\n
validators: passwordMatchValidator, asyncValidators: otherValidator });\n *\n * ```\n *\n * ### Set the updateOn
property for all controls in a form group\n *\n * The options object is used to set a default value for each child\n *

```

control's `updateOn` property. If you set `updateOn` to `blur` at the group level, all child controls default to `blur`, unless the child has explicitly specified a different `updateOn` value.

```

const c = new FormGroup({
  one: new FormControl(),
  { updateOn: 'blur' }
});

```

Using a FormGroup with optional controls

It is possible to have optional controls in a FormGroup. An optional control can be removed later using `removeControl`, and can be omitted when calling `reset`. Optional controls must be declared optional in the group's type.

```

const c = new FormGroup<{one?: FormControl<string>}>({
  one: new FormControl()
});

```

Notice that `c.value.one` has type `string|null|undefined`. This is because calling `c.reset({})` without providing the optional key `one` will cause it to become `null`.

```

  level `FormGroup` instance and binds it to a form\n * to track aggregate form value and validation status.\n * As
  soon as you import the `FormsModule`, this directive becomes active by default on\n

```

\* all `<form>` tags. You don't need to add a special selector. You optionally export the directive into a local template variable using `ngForm` as the key (ex: `#myForm="ngForm"`). This is optional, but useful. Many properties from the underlying `FormGroup` instance are duplicated on the directive itself, so a reference to it gives you access to the aggregate value and validity status of the form, as well as user interaction properties like `dirty` and `touched`. To register child controls with the form, use `NgModel` with a `name` attribute. You may use `NgModelGroup` to create sub-groups within the form. If necessary, listen to the directive's `ngSubmit` event to be notified when the user has triggered a form submission. The `ngSubmit` event emits the original form submission event. In template driven forms, all `<form>` tags are automatically tagged as `NgForm`. To import the `FormsModule` but skip its usage in some forms, for example, to use native HTML5 validation, add the `ngNoForm` and the `<form>` tags won't create an `NgForm` directive. In reactive forms, using `ngNoForm` is unnecessary because the `<form>` tags are inert. In that case, you would refrain from using the `formGroup` directive. @usageNotes

### Listening for form submission

The following example shows how to capture the form values from the `ngSubmit` event.

```
{@example forms/ts/simpleForm/simple_form_example.ts region='Component'}
```

### Setting the update options

The following example shows you how to change the `updateOn` option from its default using `ngFormOptions`.

```
html
<form [ngFormOptions]="{updateOn: 'blur'}">
<input name="one" ngModel> <!-- this ngModel will update on blur -->
</form>
```

### Native DOM validation UI

In order to prevent the native DOM form validation UI from interfering with Angular's form validation, Angular automatically adds the `novalidate` attribute on any `<form>` whenever `FormsModule` or `ReactiveFormsModule` are imported into the application. If you want to explicitly enable native DOM validation UI with Angular forms, you can add the `ngNativeValidate` attribute to the `<form>` element.

```
html
<form ngNativeValidate> ... </form>
```

@ngModule

```

```

FormControlState<T> {\n value: T;\n disabled: boolean;\n}\n\n/\*\*\n \* Interface for options provided to a `FormControl`.\n \*\n \* This interface extends all options from { @link AbstractControlOptions }, plus some options\n \* unique to `FormControl`.\n \*\n \* @publicApi\n \*/\nexport interface FormControlOptions extends AbstractControlOptions {\n /\*\*\n \* @description\n \* Whether to use the initial value used to construct the `FormControl` as its default value\n \* as well. If this option is false or not provided, the default value of a FormControl is `null`.\n \* When a FormControl is reset without an explicit value, its value reverts to\n \* its default value.\n \*/\n nonNullable?: boolean;\n\n /\*\*\n \* @deprecated Use `nonNullable` instead.\n \*/\n initialValueIsDefault?: boolean;\n}\n\n/\*\*\n \* Tracks the value and validation status of an individual form control.\n \*\n \* This is one of the four fundamental building blocks of Angular forms, along with\n \* `FormGroup`, `FormArray` and `FormRecord`. It extends the `AbstractControl` class that\n \* implements most of the base functionality for accessing the value, validation status,\n \* user interactions and events.\n \*\n \* `FormControl` takes a single generic argument, which describes the type of its value. This\n \* argument always implicitly includes `null` because the control can be reset. To change this\n \* behavior, set `nonNullable` or see the usage notes below.\n \*\n \* See [usage examples below](#usage-notes).\n \*\n \* @see `AbstractControl`\n \* @see [Reactive Forms Guide](guide/reactive-forms)\n \* @see [Usage Notes](#usage-notes)\n \*\n \* @publicApi\n \*/\n\n @overrideImplementation FormControlCtor\n \*\n \* @usageNotes\n \*\n \* ### Initializing Form Controls\n \*\n \* Instantiate a `FormControl`, with an initial value.\n \*\n \* ```ts\n \* const control = new FormControl('some value');\n \* console.log(control.value); // 'some value'\n \* ```\n \*\n \* The following example initializes the control with a form state object. The `value` and `disabled` keys are required in this case.\n \*\n \* ```ts\n \* const control = new FormControl({ value: 'n/a', disabled: true });\n \* console.log(control.value); // 'n/a'\n \* console.log(control.status); // 'DISABLED'\n \* ```\n \*\n \* The following example initializes the control with a synchronous validator.\n \*\n \* ```ts\n \* const control = new FormControl("", Validators.required);\n \* console.log(control.value); // ""\n \* console.log(control.status); // 'INVALID'\n \* ```\n \*\n \* The following example initializes the control using an options object.\n \*\n \* ```ts\n \* const control = new FormControl("", {\n \* validators: Validators.required,\n \* asyncValidators: myAsyncValidator\n \* });\n \* ```\n \*\n \* ### The single type argument\n \*\n \* `FormControl` accepts a generic argument, which describes the type of its value. In most cases, this argument will be inferred. If you are initializing the control to `null`, or you otherwise wish to provide a\n \* wider type, you may specify the argument explicitly:\n \*\n \* ```\n \* let fc = new FormControl<string|null>(null);\n \* fc.setValue('foo');\n \* ```\n \*\n \* You might notice that `null` is always added to the type of the control. This is because the control will become `null` if you call `reset`. You can change\n \* this behavior by setting `{ nonNullable: true }`.\n \*\n \* ### Configure the control to update on a blur event\n \*\n \* Set the `updateOn` option to `blur` to update on the blur `event`.\n \*\n \* ```ts\n \* const control = new FormControl("", { updateOn: 'blur' });\n \* ```\n \*\n \* ### Configure the control to update on a submit event\n \*\n \* Set the `updateOn` option to `submit` to update on a submit `event`.\n \*\n \* ```ts\n \* const control = new FormControl("", { updateOn: 'submit' });\n \* ```\n \*\n \* ### Reset the control back to a specific value\n \*\n \* You reset to a specific form state by passing through a standalone\n \* value or a form state object that contains both a value and a disabled state\n \* (these are the only two properties that cannot be calculated).\n \*\n \* ```ts\n \* const control = new FormControl('Nancy');\n \* console.log(control.value); // 'Nancy'\n \* control.reset('Drew');\n \* console.log(control.value); // 'Drew'\n \* ```\n \*\n \* ### Reset the control to its initial value\n \*\n \* If you wish to always reset the control to its initial value (instead of null),\n \* you can pass the `nonNullable` option:\n \*\n \* ```ts\n \* const control = new FormControl('Nancy', { nonNullable: true });\n \* console.log(control.value); // 'Nancy'\n \* control.reset();\n \* console.log(control.value); // 'Nancy'\n \* ```\n \*\n \* ### Reset the control back to an initial value and disabled\n \*\n \* ```ts\n \* const control = new FormControl('Nancy');\n \* console.log(control.value); // 'Nancy'\n \* console.log(control.status); // 'VALID'\n \* control.reset({ value: 'Drew', disabled: true });\n \* console.log(control.value); // 'Drew'\n \* console.log(control.status); // 'DISABLED'\n \* ```\n\nexport interface FormControl<TValue = any> extends AbstractControl<TValue> {\n /\*\*\n \* The default value of this FormControl, used whenever the control is reset without an explicit\n \* value. See { @link

As this is a very common case for `ngModel`, we added\n this second change\n * detection run.\n *\n * Notes:\n * - this is just one extra run no matter how many `ngModel`s\n have been changed.\n * - this is a general problem when using `exportAs` for directives!\n\n */\nconst\n resolvedPromise = (() => Promise.resolve());\n\n/**\n * @description\n * Creates a `FormControl` instance from a\n domain\n model and binds it\n * to a form control element.\n *\n * The `FormControl` instance tracks the value, user\n interaction, and\n * validation status of the control and keeps the view synced with the model. If used\n * within a\n parent form, the directive also registers itself with the form as a child\n * control.\n *\n * This directive is used by\n itself or as part of a larger form. Use the\n * `ngModel` selector to activate it.\n *\n * It accepts a domain model as\n an optional `Input`. If you have a one-way binding\n * to `ngModel` with `[]` syntax, changing the domain model's\n value in the component\n * class sets the value in the view. If you have a two-way binding with `[]` syntax\n * (also known as 'banana-in-a-box syntax'), the value in the UI always syncs back to\n * the domain model in your\n class.\n *\n * To inspect the properties of the associated `FormControl` (like the validity state),\n * export the\n directive into a local template variable using `ngModel` as the key (ex:\n *\n * `#myVar="ngModel"`). You can then access the control using the directive's `control` property.\n * However, the\n most commonly used properties (like `valid` and `dirty`) also exist on the control\n * for direct access. See a full list\n of properties directly available in\n * `AbstractControlDirective`. \n *\n * @see `RadioControlValueAccessor`\n *\n * @see `SelectControlValueAccessor`\n *\n * @usageNotes\n *\n * ### Using ngModel on a standalone control\n *\n * The following examples show a simple standalone control using `ngModel`:\n *\n * { @example\n forms/ts/simpleNgModel/simple_ng_model_example.ts region='Component'}\n *\n * When using the `ngModel`\n within `<form>` tags, you'll also need to supply a `name` attribute\n * so that the control can be registered with the\n parent form under that name.\n *\n * In the context of a parent form, it's often unnecessary to include one-way or\n two-way binding,\n * as the parent form syncs the value for you. You access its properties by exporting it into\n a\n * local template variable using `ngForm` such as (`#f="ngForm"`). Use the variable where\n * needed on form\n submission.\n *\n * If you do need to populate initial values into your form, using a one-way binding for\n * `ngModel`\n tends to be sufficient as long as you use the exported form's value rather\n * than the domain model's\n value on submit.\n *\n * ### Using ngModel within a form\n *\n * The following example shows controls using\n `ngModel` within a form:\n *\n * { @example forms/ts/simpleForm/simple_form_example.ts

```

```

region='Component'}\n *\n * ### Using a standalone ngModel within a group\n *\n * The following example shows
you how to use a standalone ngModel control\n * within a form. This controls the display of the form, but doesn't
contain form data.\n *\n * ```html\n * <form>\n * <input name="login" ngModel placeholder="Login">\n *
<input type="checkbox" ngModel [ngModelOptions]="{standalone: true}"> Show more options?\n * </form>\n
* <!-- form value: {login:
"} -->\n *\n * ### Setting the ngModel `name` attribute through options\n *\n * The following example
shows you an alternate way to set the name attribute. Here,\n * an attribute identified as name is used within a
custom form control component. To still be able\n * to specify the NgModel's name, you must specify it using the
`ngModelOptions` input instead.\n *\n * ```html\n * <my-custom-form-control name="Nancy"
ngModel [ngModelOptions]="{name: 'user'}">\n * </my-custom-form-control>\n * </form>\n * <!-- form value:
{user: " } -->\n *\n * @ngModule FormsModule\n * @publicApi\n * ^\n @Directive({\n selector:

```

##### Using radio buttons with reactive form directives

The follow example shows how to use radio buttons in a reactive form. When using radio buttons in a reactive form, radio buttons in the same group should have the same `formControlName`. Providing a `name` attribute is optional.

```

@example
forms/ts/reactiveRadioButtons/reactive_radio_button_example.ts
region='Reactive'
@NgModule
ReactiveFormsModule
@NgModule FormsModule
@publicApi
@Directive({
  selector:

```

```

```

```

 * @example
 * forms/ts/reactiveSelectControl/reactive_select_control_example.ts
 * region='Component'
 */
/**
 * ### Using select

```

controls in a template-driven form

To use a select in a template-driven form, simply add an `ngModel` and a `name` attribute to the main `<select>` tag.

```
{ @example forms/ts/selectControl/select_control_example.ts
region='Component'}
```

### Customizing option selection

Angular uses object identity to select option. It's possible for the identities of items to change while the data does not. This can happen, for example, if the items are produced from an RPC to the server, and that RPC is re-run. Even if the data hasn't changed, the second response will produce objects with different identities.

To customize the default option comparison algorithm,

```
<select>` supports `compareWith` input. `compareWith` takes a **function** which has two arguments:
`option1` and `option2`. If `compareWith` is given, Angular selects option by the return value of the function.
`ts`
const selectedCountriesControl = new FormControl();
<select
[compareWith]="compareFn" [formControl]="selectedCountriesControl">
  <option *ngFor="let country
of countries" [ngValue]="country">
    {{country.name}}
  </option>
</select>
compareFn(c1: Country, c2: Country): boolean {
  return c1 && c2 ? c1.id === c2.id : c1 === c2;
}
**Note:** We listen to the 'change' event because 'input' events aren't fired for selects in IE, see:
https://developer.mozilla.org/en-US/docs/Web/API/HTMLElement/input_event#browser_compatibility

})\n
export class
RequiredValidator extends AbstractValidatorDirective {\n /**\n * @description\n * Tracks changes to the

```

required attribute bound to this directive.  
`@Input() required!: boolean|string;`  
`/** @internal */`  
`override inputName = 'required';`  
`/** @internal */`  
`override normalizeInput = coerceToBoolean;`  
`/** @internal */`  
`override createValidator = (input: boolean): ValidatorFn => requiredValidator;`  
`/** @nodoc */`  
`override enabled(input: boolean): boolean {`  
`return input;`  
`}`  
 A Directive that adds the `required` validator to checkbox controls marked with the `required` attribute. The directive is provided with the `NG\_VALIDATORS` multi-provider list.  
 @see [Form Validation](guide/form-validation)  
 @usageNotes  
 ### Adding a required checkbox validator using template-driven forms  
 The following example

shows how to add a checkbox required validator to an input attached to an `ngModel` binding.

```

<input type="checkbox" name="active" ngModel required>

```

```

@publicApi
@NgModule
FormsModule
@NgModule
ReactiveFormsModule
@Directive({
  selector:
'input[type=checkbox][required][formControlName],input[type=checkbox][required][formControl],input[type=checkbox][required][ngModel]',
  providers: [CHECKBOX_REQUIRED_VALIDATOR],
  host: {'[attr.required]':
'_enabled ? \'\' : null'}
})
export class CheckboxRequiredValidator extends RequiredValidator {
  /** @internal */
  override createValidator = (input: unknown): ValidatorFn => requiredTrueValidator;
}

```

Provider which adds `EmailValidator` to the `NG\_VALIDATORS` multi-provider list.  
 @next const EMAIL\_VALIDATOR: any = {  
 provide: NG\_VALIDATORS,  
 useExisting: forwardRef(() => EmailValidator),  
 multi: true};  
 A directive that adds the `email`

validator to controls marked with the `email` attribute. The directive is provided with the `NG\_VALIDATORS` multi-provider list.  
 The email validation is based on the WHATWG HTML specification with some enhancements to incorporate more RFC rules. More information can be found on the [Validators.email page](api/forms/Validators#email).  
 @see [Form Validation](guide/form-validation)  
 @usageNotes  
 ### Adding an email validator  
 The following example shows how to add an email validator to an input attached to an `ngModel` binding.

```

<input type="email" name="email" ngModel email="true">
<input type="email" name="email" ngModel [email]="true">

```

```

@publicApi
@NgModule
FormsModule
@NgModule
ReactiveFormsModule
@Directive({
  selector:
'[email][formControlName],[email][formControl],[email][ngModel]',
  providers:
[EMAIL_VALIDATOR]
})

```

```

export
class EmailValidator extends AbstractValidatorDirective {
  /** @description */
  Tracks changes to the email attribute bound to this directive.
  /** @internal */
  @Input() email!: boolean|string;
  /** @internal */
  override inputName = 'email';
  /** @internal */
  override normalizeInput = coerceToBoolean;
  /** @internal */
  override createValidator = (input: number): ValidatorFn => emailValidator;
  /** @nodoc */
  override enabled(input: boolean): boolean {
    return input;
  }
}

```

A function that receives a control and synchronously returns a map of validation errors if present, otherwise null.  
 @publicApi  
 @next interface ValidatorFn {  
 (control: AbstractControl): ValidationErrors|null;  
}

A function that receives a control and returns a Promise or observable that emits validation errors if present, otherwise null.  
 @publicApi  
 @next interface AsyncValidatorFn {  
 (control: AbstractControl): Promise<ValidationErrors|null>|Observable<ValidationErrors|null>;  
}

Provider which adds `MinLengthValidator` to the `NG\_VALIDATORS` multi-provider list.  
 @next const MIN\_LENGTH\_VALIDATOR: any = {  
 provide: NG\_VALIDATORS,  
 useExisting: forwardRef(() => MinLengthValidator),  
 multi: true};  
 A directive that adds minimum length validation to controls marked with the `minlength` attribute. The directive is provided with the `NG\_VALIDATORS` multi-provider list.  
 @see [Form Validation](guide/form-validation)  
 @usageNotes  
 ### Adding a minimum length validator  
 The following example shows how to add a minimum length validator to an input attached to an `ngModel` binding.

```

<input name="firstName" ngModel minlength="4">

```

```

@ngModule ReactiveFormsModule
@ngModule FormsModule
@publicApi
@Directive({
  selector:

```

```

'[minlength][formControlName],[minlength][formControl],[minlength][ngModel]',\n
  providers: [MIN_LENGTH_VALIDATOR],\n host: {'[attr.minlength]': '_enabled ? minlength : null'}\n))\nexport
class MinLengthValidator extends AbstractValidatorDirective {\n /**\n * @description\n * Tracks changes to
the minimum length bound to this directive.\n */\n @Input() minlength!: string|number|null;\n /** @internal
*/\n override inputName = 'minlength';\n /** @internal */\n override normalizeInput = (input: string|number):
number => toInteger(input);\n /** @internal */\n override createValidator = (minlength: number): ValidatorFn
=> minLengthValidator(minlength);\n}\n\n/**\n * @description\n * Provider which adds `MaxLengthValidator` to
the `NG_VALIDATORS` multi-provider list.\n */\nexport const MAX_LENGTH_VALIDATOR: any = {\n
provide: NG_VALIDATORS,\n useExisting: forwardRef(() => MaxLengthValidator),\n multi: true\n};\n\n/**\n *
A directive that adds max length validation to controls
marked with the\n * `maxlength` attribute. The directive is provided with the `NG_VALIDATORS` multi-provider
list.\n * @see [Form Validation](guide/form-validation)\n * @usageNotes\n * ### Adding a maximum
length validator\n * The following example shows how to add a maximum length validator to an input attached
to an\n * ngModel binding.\n * ```html\n * <input name="\`firstName\`" ngModel maxlength="\`25\`">\n * ```\n *
*/\n * @ngModule ReactiveFormsModule\n * @ngModule FormsModule\n * @publicApi\n */\n @Directive({\n
selector: '[maxlength][formControlName],[maxlength][formControl],[maxlength][ngModel]',\n providers:

export type FormArrayRawValue<T extends AbstractControl<any>> =\n TypedOrUntyped<T, Array<RawValue<T>>, any[]>;\n *\n /**\n * Tracks the value and validity state of an array of
`FormControl`,\n * `FormGroup` or `FormArray` instances.\n *\n * A `FormArray` aggregates the values of each
child `FormControl` into an array.\n * It calculates its status by reducing the status values of its children. For
example, if one of\n * the controls in a `FormArray` is invalid, the entire array becomes invalid.\n *\n *
`FormArray` accepts
one generic argument, which is the type of the controls inside.\n * If you need a heterogenous array, use { @link
UntypedFormArray }.\n *\n * `FormArray` is one of the four fundamental building blocks used to define forms in
Angular,\n * along with `FormControl`, `FormGroup`, and `FormRecord`.\n *\n * @usageNotes\n *\n * ### Create
an array of form controls\n *\n * ```\n * const arr = new FormArray([\n * new FormControl('Nancy',
Validators.minLength(2)),\n * new FormControl('Drew'),\n * ]);\n *\n * console.log(arr.value); // ['Nancy',
'Drew']\n * console.log(arr.status); // 'VALID'\n * ```\n *\n * ### Create a form array with array-level validators\n
*\n * You include array-level validators and async validators. These come in handy\n * when you want to perform
validation that considers the value of more than one child\n * control.\n *\n * The two types of validators are passed
in separately as the second and third arg\n * respectively, or together as part of an options object.\n
*\n * ```\n * const arr = new FormArray([\n * new FormControl('Nancy'),\n * new FormControl('Drew')\n * ],
{validators: myValidator, asyncValidators: myAsyncValidator});\n * ```\n *\n * ### Set the updateOn property for
all controls in a form array\n *\n * The options object is used to set a default value for each child\n * control's
`updateOn` property. If you set `updateOn` to `blur` at the\n * array level, all child controls default to `blur`, unless
the child\n * has explicitly specified a different `updateOn` value.\n *\n * ```ts\n * const arr = new FormArray([\n *
new FormControl(),\n * ], {updateOn: 'blur'});\n * ```\n *\n * ### Adding or removing controls from a form array\n
*\n * To change the controls in the array, use the `push`, `insert`, `removeAt` or `clear` methods\n * in `FormArray`
itself. These methods ensure the controls are properly tracked in the\n * form's hierarchy. Do not modify the array of
`AbstractControl`s used to instantiate\n * the `FormArray`

```

```

directly, as that result in strange and unexpected behavior such
 * as broken change detection.
 *

// clang-format on  
/\*\*  
 \* @description  
 \* Creates an `AbstractControl` from a user-specified configuration.  
 \* The `FormBuilder` provides syntactic sugar that shortens creating instances of a  
`FormControl`, `FormGroup`, or `FormArray`. It reduces the amount of boilerplate needed to  
build complex forms.  
@see [Reactive Forms Guide](guide/reactive-forms)  
@publicApi  
@injectable({providedIn: ReactiveFormsModule})  
export class FormBuilder {  
private useNonNullable: boolean = false;  
/\*\*  
 \* @description  
 \* Returns a FormBuilder in which automatically constructed  
@see FormControl} elements  
 \* have `{nonNullable: true}` and are non-nullable.  
 \*  
 \* Constructing non-nullable controls  
 \*  
 \* When constructing a control, it will be non-nullable, and will reset to its initial value.  
 \*  
 \*  
 \*  
 \* let nnfb = new FormBuilder().nonNullable;  
 \* let name = nnfb.control('Alex'); // FormControl<string>  
 \* name.reset(); console.log(name); // 'Alex'  
 \*  
 \* Constructing non-nullable groups or arrays  
 \*  
 \* When constructing a group or array, all automatically created inner controls will be  
 \* non-nullable, and will reset to their initial values.  
 \*  
 \*  
 \*  
 \* let nnfb = new FormBuilder().nonNullable;  
 \* let name = nnfb.group({who: 'Alex'}); // FormGroup<{who: FormControl<string>}>  
 \* name.reset(); console.log(name); // {who: 'Alex'}  
 \*  
 \* Constructing nullable fields on groups or arrays  
 \*  
 \* It is still possible to have a nullable field.  
 \*  
 \* In particular, any `FormControl` which is  
 \* already constructed will not be altered. For example:  
 \*  
 \*  
 \* let nnfb = new FormBuilder().nonNullable;  
 \* // FormGroup<{who: FormControl<string|null>}>  
 \* let name = nnfb.group({who: new FormControl('Alex')});  
 \* name.reset(); console.log(name); // {who: null}  
 \*  
 \* Because the inner control is constructed explicitly by the caller, the builder has  
 \* no control over how it is created, and cannot exclude the `null`.  
 \*  
 \*  
 \* get nonNullable(): NonNullableFormBuilder {  
const nnfb = new FormBuilder();  
nnfb.useNonNullable = true;  
return nnfb as NonNullableFormBuilder;  
}  
/\*\*  
 \* @description  
 \* Constructs a new `FormGroup` instance. Accepts a single generic argument, which is an  
object  
 \* containing all the keys and corresponding inner control types.  
 \* @param controls A collection of child controls. The key for each child is the name  
 \* under which it is registered.  
 \* @param options Configuration options object for the `FormGroup`. The object should have  
the  
 \* `AbstractControlOptions` type and might contain the following fields:  
 \* \* `validators`: A synchronous validator function, or an array of validator functions.  
 \* \* `asyncValidators`: A single async validator or array of async validator functions.  
 \* \* `updateOn`: The event upon which the control should be updated (options: 'change' | 'blur' | 'submit').  
 \*  
 \*  
 \* group<T extends {}>(controls: T, options?: AbstractControlOptions|null,  
 \* ): FormGroup<{[K in keyof T]: Element<T[K], null>}>;  
 \*  
 \*  
 \* @description  
 \* Constructs a new `FormGroup` instance.  
 \* @deprecated This API is not typesafe and can result in issues with Closure Compiler renaming.  
 \* Use the `FormBuilder#group` overload with `AbstractControlOptions` instead.  
 \* Note that `AbstractControlOptions` expects `validators` and `asyncValidators` to be valid  
 \* validators. If you have custom validators, make sure their validation function parameter is  
 \* `AbstractControl` and not a sub-class, such as `FormGroup`. These functions will be called  
 \* with an object of type `AbstractControl` and that cannot be automatically downcast to a  
 \* subclass, so TypeScript sees this as an error. For example, change the  
 \* `(group: FormGroup) => ValidationErrors|null` signature to be  
 \* `(group: AbstractControl) => ValidationErrors|null`.  
 \*  
 \* @param controls A record of child controls. The key for each child is the name  
 \* under which the control is registered.  
 \* @param options Configuration options object for the `FormGroup`. The legacy configuration  
 \* object consists of:  
 \* \* `validator`: A synchronous validator

function, or an array of validator functions.

`asyncValidator`: A single async validator or array of async validator functions

Note: the legacy format is deprecated and might be removed in one of the next major versions of Angular.

```

group(controls: {[key: string]: any}, options: {[key: string]: any}): FormGroup;
group(controls: {[key: string]: any}, options: AbstractControlOptions|{[key: string]: any}|null = null): FormGroup {
  const reducedControls = this._reduceControls(controls);
  let newOptions: FormControlOptions = {};
  if (isAbstractControlOptions(options)) {
    // `options` are `AbstractControlOptions`
    newOptions = options;
  } else if (options !== null) {
    // `options` are legacy form group options
    newOptions.validators = (options as any).validator;
    newOptions.asyncValidators = (options as any).asyncValidator;
  }
  return new FormGroup(reducedControls, newOptions);
}

```

`@description` Constructs a new `FormRecord` instance. Accepts a single generic argument, which is an object containing all the keys and corresponding inner control types.

`@param controls` A collection of child controls. The key for each child is the name under which it is registered.

`@param options` Configuration options object for the `FormRecord`. The object should have the `AbstractControlOptions` type and might contain the following fields:

- `validators`: A synchronous validator function, or an array of validator functions.
- `asyncValidators`: A single async validator or array of async validator functions.
- `updateOn`: The event upon which the control should be updated (options: 'change' | 'blur' | 'submit').

```

record<T>(controls: {[key: string]: T}, options: AbstractControlOptions|null = null): FormRecord<Element<T, null>> {
  const reducedControls = this._reduceControls(controls);
  // Cast to `any` because the inferred types are not as specific as Element.
  return new FormRecord(reducedControls, options) as any;
}

```

`@deprecated` Use `nonNullable` instead.

```

control<T>(formState: T|FormControlState<T>, opts: FormControlOptions&{initialValueIsDefault: true}): FormControl<T>;
control<T>(formState: T|FormControlState<T>, opts: FormControlOptions&{nonNullable: true}): FormControl<T>;

```

`@deprecated` When passing an `options` argument, the `asyncValidator` argument has no effect.

```

control<T>(formState: T|FormControlState<T>, opts: FormControlOptions, asyncValidator: AsyncValidatorFn|AsyncValidatorFn[]): FormControl<T|nullable>;
control<T>(formState: T|FormControlState<T>, validatorOrOpts?: ValidatorFn|ValidatorFn[]|FormControlOptions|null, asyncValidator?: AsyncValidatorFn|AsyncValidatorFn[]|null): FormControl<T|nullable>;

```

`@description` Constructs a new `FormControl` with the given state, validators and options. Sets `{nonNullable: true}` in the options to get a non-nullable control. Otherwise, the control will be nullable. Accepts a single generic argument, which is the type of the control's value.

`@param formState` Initializes the control with an initial state value, or with an object that contains both a value and a disabled status.

`@param validatorOrOpts` A synchronous validator function, or an array of such functions, or a `FormControlOptions` object that contains validation functions and a validation trigger.

`@param asyncValidator` A single async validator or array of async validator functions.

`@usageNotes` Initialize a control as disabled

The following example returns a control with an initial value in a disabled state.

```

<code-example path="forms/ts/formBuilder/form_builder_example.ts" region="disabled-control">
control<T>(formState: T|FormControlState<T>, validatorOrOpts?: ValidatorFn|ValidatorFn[]|FormControlOptions|null, asyncValidator?: AsyncValidatorFn|AsyncValidatorFn[]|null): FormControl {
  let newOptions: FormControlOptions = {};
  if (!this.useNonNullable) {
    return new FormControl(formState, validatorOrOpts, asyncValidator);
  }
  if (isAbstractControlOptions(validatorOrOpts)) {
    // If the second argument is options, then they are copied.
    newOptions = validatorOrOpts;
  } else {
    // If the other arguments are validators, they are copied into an options object.
    newOptions.validators = validatorOrOpts;
    newOptions.asyncValidators = asyncValidator;
  }
  return new FormControl<T>(formState, {...newOptions, nonNullable: true});
}

```

`@description` Constructs a new `FormArray` from the given array of configurations, validators and options. Accepts a single generic argument, which is the type of each control inside the array.

`@param controls`

```

An array of child controls or control configs. Each child control is given an
 * index when it is registered.
 * @param validatorOrOpts A synchronous validator function, or an array of such functions, or an
`AbstractControlOptions` object that contains
 * validation functions and a validation trigger.
 * @param asyncValidator A single async validator or array of async validator functions.

with\n \* `AbstractControl`s.\n \* @see `NG\_ASYNC\_VALIDATORS`\n \* @usageNotes\n \* ###  
Providing a custom validator\n \* The following example registers a custom validator directive. Adding the  
validator to the\n \* existing collection of validators requires the `multi: true` option.\n \* \n \* ``typescript\n \*  
@Directive({\n \* selector: '[customValidator]',\n \* providers: [{provide: NG\_VALIDATORS, useExisting:  
CustomValidatorDirective, multi: true}]\n \* })\n \* class CustomValidatorDirective implements Validator {\n \*  
validate(control:  
AbstractControl): ValidationErrors | null {\n \* return { 'custom': true };}\n \* }\n \* }\n \* @publicApi\n \*  
\nexport const NG\_VALIDATORS = new InjectionToken<Array<Validator|Function>>('NgValidators');\n\n/\*\*\n \*  
@description\n \* An `InjectionToken` for registering additional asynchronous validators used with\n \*  
`AbstractControl`s.\n \* @see `NG\_ASYNC\_VALIDATORS`\n \* @usageNotes\n \* ### Provide a custom async  
validator directive\n \* The following example implements the `AsyncValidator` interface to create an\n \* async  
validator directive with a custom error key.\n \* \n \* ``typescript\n \* @Directive({\n \* selector:  
'[customAsyncValidator]',\n \* providers: [{provide: NG\_ASYNC\_VALIDATORS, useExisting:  
CustomAsyncValidatorDirective, multi:\n \* true}]\n \* })\n \* class CustomAsyncValidatorDirective implements  
AsyncValidator {\n \* validate(control: AbstractControl): Promise<ValidationErrors|null> {\n \* return  
Promise.resolve({'custom': true});\n \*  
}\n \* }\n \* @publicApi\n \*  
\nexport const NG\_ASYNC\_VALIDATORS =\n \* new  
InjectionToken<Array<Validator|Function>>('NgAsyncValidators');\n\n/\*\*\n \* A regular expression that matches  
valid e-mail addresses.\n \* At a high level, this regexp matches e-mail addresses of the format `local-part@tld`,  
where:\n \* - `local-part` consists of one or more of the allowed characters (alphanumeric and some\n \* punctuation  
symbols).\n \* - `local-part` cannot begin or end with a period (`.`).\n \* - `local-part` cannot be longer than 64  
characters.\n \* - `tld` consists of one or more `labels` separated by periods (`.`). For example `localhost` or\n \*  
`foo.com`.\n \* - A `label` consists of one or more of the allowed characters (alphanumeric, dashes (`-`) and\n \*  
periods (`.`)).\n \* - A `label` cannot begin or end with a dash (`-`) or a period (`.`).\n \* - A `label` cannot be longer  
than 63 characters.\n \* - The whole address cannot be longer than 254 characters.\n \* \n \* ## Implementation  
background\n \* This regexp was ported over from AngularJS (see there for git history):\n \*  
<https://github.com/angular/angular.js/blob/c133ef836/src/ng/directive/input.js#L27>\n \* It is based on the\n \*  
[WHATWG version](<https://html.spec.whatwg.org/multipage/input.html#valid-e-mail-address>) with\n \* some  
enhancements to incorporate more RFC rules (such as rules related to domain names and the\n \* lengths of different  
parts of the address). The main differences from the WHATWG version are:\n \* - Disallow `local-part` to begin or  
end with a period (`.`).\n \* - Disallow `local-part` length to exceed 64 characters.\n \* - Disallow total address  
length to exceed 254 characters.\n \* \n \* See [this commit](<https://github.com/angular/angular.js/commit/f3f5cf72e>)  
for more details.\n \* \n \* const EMAIL\_REGEXP =\n \* /^(?=[1,254]\$)(?=[1,64]@)[a-zA-Z0-  
9!#\$%&'\*/+/?^\_`{}~~]+(?:\\.([a-zA-Z0-9!#\$%&'\*/+/?^\_`{}~~]+)\*@[a-zA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-  
9])?(?:\\.([a-zA-Z0-9](?:[a-zA-Z0-9-]{0,61}[a-zA-Z0-9])?)\*\$);\n\n/\*\*\n \*  
@description\n \* Provides a set of built-in validators that can be used by form controls.\n \* \n \* A validator is a  
function that processes a `FormControl` or collection of\n \* controls and returns an error map or null. A null map  
means that validation has passed.\n \* \n \* @see [Form Validation](/guide/form-validation)\n \* \n \* @publicApi\n \*  
\nexport class Validators {\n \* /\*\*\n \* @description\n \* Validator that requires the control's value to be greater  
than or equal to the provided number.\n \* \n \* @usageNotes\n \* ### Validate against a minimum of 3\n \*  
\n \* ``typescript\n \* const control = new FormControl(2, Validators.min(3));\n \* \n \*  
console.log(control.errors); // {min: {min: 3, actual: 2}}\n \* \n \* \n \* @returns A validator function that  
returns an error map with the\n \* `min` property if the validation check fails, otherwise `null`.\n \* \n \* @see  
`updateValueAndValidity()`\n \* \n \* \n \* static min(min:  
number): ValidatorFn {\n \* return minValidator(min);\n \* }\n \* }\n \* /\*\*\n \* @description\n \* Validator that requires  
the control's value to be less than or equal to the provided number.\n \* \n \* @usageNotes\n \* \n \* ### Validate

```

against a maximum of 15\n * \n * ``typescript\n * const control = new FormControl(16, Validators.max(15));\n
*\n * console.log(control.errors); // {max: {max: 15, actual: 16}}\n * ``\n *\n * @returns A validator function
that returns an error map with the\n * `max` property if the validation check fails, otherwise `null`.\n *\n * @see
`updateValueAndValidity()`\n *\n */\n static max(max: number): ValidatorFn {\n return maxValidator(max);\n
}\n\n /**\n * @description\n * Validator that requires the control have a non-empty value.\n *\n *
@usageNotes\n *\n * ### Validate that the field is non-empty\n *\n * ``typescript\n * const control = new
FormControl("", Validators.required);\n *\n * console.log(control.errors);\n
// {required: true}\n * ``\n *\n * @returns An error map with the `required` property\n * if the validation
check fails, otherwise `null`.\n *\n * @see `updateValueAndValidity()`\n *\n */\n static required(control:
AbstractControl): ValidationErrors|null {\n return requiredValidator(control);\n }\n\n /**\n * @description\n *
Validator that requires the control's value be true. This validator is commonly\n * used for required checkboxes.\n
*\n * @usageNotes\n *\n * ### Validate that the field value is true\n *\n * ``typescript\n * const control =
new FormControl('some value', Validators.requiredTrue);\n *\n * console.log(control.errors); // {required: true}\n
* ``\n *\n * @returns An error map that contains the `required` property\n * set to `true` if the validation check
fails, otherwise `null`.\n *\n * @see `updateValueAndValidity()`\n *\n */\n static requiredTrue(control:
AbstractControl): ValidationErrors|null
{\n return requiredTrueValidator(control);\n }\n\n /**\n * @description\n * Validator that requires the
control's value pass an email validation test.\n *\n * Tests the value using a [regular\n *
expression](https://developer.mozilla.org/en-US/docs/Web/JavaScript/Guide/Regular_Expressions)\n * pattern
suitable for common use cases. The pattern is based on the definition of a valid email\n * address in the
[WHATWG HTML\n * specification](https://html.spec.whatwg.org/multipage/input.html#valid-e-mail-address)
with\n * some enhancements to incorporate more RFC rules (such as rules related to domain names and the\n *
lengths of different parts of the address).\n *\n * The differences from the WHATWG version include:\n * -
Disallow `local-part` (the part before the `@` symbol) to begin or end with a period (`.`).\n * - Disallow `local-part`
to be longer than 64 characters.\n * - Disallow the whole address to be longer than 254 characters.\n *\n
* If this pattern does not satisfy your business needs, you can use `Validators.pattern()` to\n * validate the value
against a different pattern.\n *\n * @usageNotes\n *\n * ### Validate that the field matches a valid email
pattern\n *\n * ``typescript\n * const control = new FormControl('bad@', Validators.email);\n *\n *
console.log(control.errors); // {email: true}\n * ``\n *\n * @returns An error map with the `email` property\n *
if the validation check fails, otherwise `null`.\n *\n * @see `updateValueAndValidity()`\n *\n */\n static
email(control: AbstractControl): ValidationErrors|null {\n return emailValidator(control);\n }\n\n /**\n *
@description\n * Validator that requires the length of the control's value to be greater than or equal\n * to the
provided minimum length. This validator is also provided by default if you use the\n * the HTML5 `minlength`
attribute. Note that the `minLength` validator is intended to be used\n
*\n * only for types that have a numeric `length` property, such as strings or arrays. The\n * `minLength` validator
logic is also not invoked for values when their `length` property is 0\n * (for example in case of an empty string or
an empty array), to support optional controls. You\n * can use the standard `required` validator if empty values
should not be considered valid.\n *\n * @usageNotes\n *\n * ### Validate that the field has a minimum of 3
characters\n *\n * ``typescript\n * const control = new FormControl('ng', Validators.minLength(3));\n *\n *
console.log(control.errors); // {minlength: {requiredLength: 3, actualLength: 2}}\n * ``\n *\n * ``html\n *
<input minlength="5">\n * ``\n *\n * @returns A validator function that returns an error map with the\n *
`minlength` property if the validation check fails, otherwise `null`.\n *\n * @see `updateValueAndValidity()`\n
*\n */\n static minLength(minLength: number): ValidatorFn
{\n return minLengthValidator(minLength);\n }\n\n /**\n * @description\n * Validator that requires the
length of the control's value to be less than or equal\n * to the provided maximum length. This validator is also
provided by default if you use the\n * the HTML5 `maxlength` attribute. Note that the `maxLength` validator is
intended to be used\n * only for types that have a numeric `length` property, such as strings or arrays.\n *\n *
@usageNotes\n *\n * ### Validate that the field has maximum of 5 characters\n *\n * ``typescript\n * const

```

```

control = new FormControl('Angular', Validators.maxLength(5));\n * console.log(control.errors); //
{maxlength: {requiredLength: 5, actualLength: 7}}\n * \`\`\`\n * \`\`\`html\n * <input maxlength="5">\n *
\`\`\`\n * \n * @returns A validator function that returns an error map with the\n * `maxlength` property if the
validation check fails, otherwise `null`.\n * \n * @see `updateValueAndValidity()`\n
*\n * \n static maxLength(maxLength: number): ValidatorFn {\n return maxLengthValidator(maxLength);\n
}\n\n /**\n * @description\n * Validator that requires the control's value to match a regex pattern. This validator
is also\n * provided by default if you use the HTML5 `pattern` attribute.\n * \n * @usageNotes\n * \n * ###
Validate that the field only contains letters or spaces\n * \n * \`\`\`typescript\n * const control = new
FormControl('1', Validators.pattern('[a-zA-Z ]*'));\n * console.log(control.errors); // {pattern:
{requiredPattern: '^[a-zA-Z ]*$', actualValue: '1'}}\n * \`\`\`\n * \n * \`\`\`html\n * <input pattern="[a-zA-Z ]*">\n
*\n * \n * ### Pattern matching with the global or sticky flag\n * \n * `RegExp` objects created with the `g` or
`y` flags that are passed into `Validators.pattern`\n * can produce different results on the same input when
validations are run consecutively. This is\n * due to how the behavior of
`RegExp.prototype.test` is\n * specified in [ECMA-262](https://tc39.es/ecma262/#sec-regexpbuiltinexec)\n *
(`RegExp` preserves the index of the last match when the global or sticky flag is used).\n * Due to this behavior, it
is recommended that when using\n * `Validators.pattern` you **do not** pass in a `RegExp` object with either the
global or sticky\n * flag enabled.\n * \n * \`\`\`typescript\n * // Not recommended (since the `g` flag is used)\n *
const controlOne = new FormControl('1', Validators.pattern(/foo/g));\n * \n * // Good\n * const controlTwo =
new FormControl('1', Validators.pattern(/foo/));\n * \n * \n * @param pattern A regular expression to be used
as is to test the values, or a string.\n * If a string is passed, the `^` character is prepended and the `$` character is\n
* appended to the provided string (if not already present), and the resulting regular\n * expression is used to test the
values.\n * \n * @returns A validator function
that returns an error map with the\n * `pattern` property if the validation check fails, otherwise `null`.\n * \n *
@see `updateValueAndValidity()`\n * \n * \n static pattern(pattern: string|RegExp): ValidatorFn {\n return

  /**
   * Retrieves a child control given the control's
   * name or path.
   *
   * This signature for `get` supports non-const (mutable) arrays. Inferred type
   * information
   * will not be as robust, so prefer to pass a `readonly` array if possible.
   */
  get<P extends
string|Array<string|number>>(path: P):
AbstractControl<GetProperty<TRawValue, P>>|null;

  /**
   * Retrieves a child control given the control's name or path.
   *
   * @param path A dot-delimited string or array of
string/number values that define the path to the
   * control. If a string is provided, passing it as a
   * string literal will result in improved type
   * information. Likewise, if an array is provided, passing it `as const`
   * will cause improved type
   * information to be available.
   *
   * @usageNotes
   *
   * ### Retrieve a nested
   * control
   *
   * For example, to get a `name` control nested within a `person` sub-group:
   *
   *

```

```

`this.form.get('person.name');`
 * -OR-
 * `this.form.get(['person', 'name'] as const);` // `as const`
gives improved typings
 * ### Retrieve a control in a FormArray
 * When accessing an element
inside a FormArray, you can use an element index.
 * For example, to get a `price` control from the first element
in an `items` array you can use:
 * `this.form.get('items.0.price');`
 * -OR-
 * `this.form.get(['items', 0, 'price']);`
 * `get<P extends string|((string | number)[])>(path: P):`
AbstractControl<GetProperty<TRawValue, P>>|null {
 * let currPath: Array<string|number>|string
 * = path;
 * if (currPath === null) return null;
 * if (!Array.isArray(currPath)) currPath = currPath.split('.');
 * if (currPath.length === 0) return null;
 * return currPath.reduce(
 *   (control: AbstractControl|null, name) =>
 *   control && control._find(name), this);
}
 * @description
 * Reports error data for the control with
the given path.
 * @param errorCode The code of the error to check
 * @param path A list of control
names that designates how to move from the current control
 * to the control that should be queried for errors.
 * @usageNotes
 * For example, for the following `FormGroup`:
 * form = new
FormGroup({
 *   address: new FormGroup({ street: new FormControl() })
});
 * The path to
the `street` control from the root form would be `address` -> `street`.
 * It can be provided to this method in one
of two formats:
 * 1. An array of string control
names, e.g. `['address', 'street']`
 * 1. A period-delimited list of control names in one string, e.g. `address.street`
 * @returns error data for that particular error. If the control or error is not present,
 * null is returned.
 * @example
 * getError(errorCode: string, path?: Array<string|number>|string): any {
 *   const control = path ? this.get(path) :
 *   this;
 *   return control && control.errors ? control.errors[errorCode] : null;
}
 * @description
 * Reports whether the control with the given path has the error specified.
 * @param errorCode The code of
the error to check
 * @param path A list of control names that designates how to move from the current control
 * to the control that should be queried for errors.
 * @usageNotes
 * For example, for the following
`FormGroup`:
 * form = new FormGroup({
 *   address: new FormGroup({ street: new
 *   FormControl() })
});
 * The path
to the `street` control from the root form would be `address` -> `street`.
 * It can be provided to this method in
one of two formats:
 * 1. An array of string control names, e.g. `['address', 'street']`
 * 1. A period-
delimited list of control names in one string, e.g. `address.street`
 * If no path is given, this method checks
for the error on the current control.
 * @returns whether the given error is present in the control at the given
path.
 * If the control is not present, false is returned.
 * @example
 * hasError(errorCode: string, path?:

type OptionalKeys<T> = {\n  [K in keyof T] -?: undefined extends T[K] ? K : never\n}[keyof T];\n\n/**\n * Tracks
the value and validity state of a group of `FormControl` instances.\n *\n * A `FormGroup` aggregates the values of
each child `FormControl` into one object,\n * with each control name as the key. It calculates its status by reducing
the status values\n * of its children. For example, if one of the controls
in a group is invalid, the entire\n * group becomes invalid.\n *\n * `FormGroup` is one of the four fundamental
building blocks used to define forms in Angular,\n * along with `FormControl`, `FormArray`, and `FormRecord`.\n
*\n * When instantiating a `FormGroup`, pass in a collection of child controls as the first\n * argument. The key for
each child registers the name for the control.\n *\n * `FormGroup` is intended for use cases where the keys are
known ahead of time.\n *\n * If you need to dynamically add and remove controls, use { @link FormRecord } instead.\n
*\n * `FormGroup` accepts an optional type parameter `TControl`, which is an object type with inner\n * control
types as values.\n *\n * @usageNotes\n *\n * ### Create a form group with 2 controls\n *\n * ```\n * const form =
new FormGroup({\n *   first: new FormControl('Nancy', Validators.minLength(2)),\n *   last: new
FormControl('Drew'),\n * });\n *\n * console.log(form.value); // {first: 'Nancy', last: 'Drew'}\n *\n *
console.log(form.status);
\n *\n * // 'VALID'\n *\n * ```\n *\n * ### The type argument, and optional controls\n *\n * `FormGroup` accepts one generic
argument, which is an object containing its inner controls.\n *\n * This type will usually be inferred automatically, but
you can always specify it explicitly if you\n * wish.\n *\n * If you have controls that are optional (i.e. they can be
removed, you can use the `?` in the\n * type):\n *\n * ```\n * const form = new FormGroup<{\n *   first:

```

```

FormControl<string|null>,\n * middle?: FormControl<string|null>, // Middle name is optional.\n * last:
FormControl<string|null>,\n * }>({\n * first: new FormControl('Nancy'),\n * last: new FormControl('Drew'),\n *
});\n * ```\n *\n * ### Create a form group with a group-level validator\n *\n * You include group-level validators as
the second arg, or group-level async\n * validators as the third arg. These come in handy when you want to perform
validation\n * that considers the value of more than one child control.\n
*\n * ```\n *\n * const form = new FormGroup({\n * password: new FormControl("", Validators.minLength(2)),\n *
passwordConfirm: new FormControl("", Validators.minLength(2)),\n * }, passwordMatchValidator);\n *\n *\n *
function passwordMatchValidator(g: FormGroup) {\n * return g.get('password').value ===
g.get('passwordConfirm').value\n * ? null : {'mismatch': true};\n * }\n * ```\n *\n * Like `FormControl`
instances, you choose to pass in\n * validators and async validators as part of an options object.\n *\n * ```\n *\n * const
form = new FormGroup({\n * password: new FormControl("")\n * passwordConfirm: new FormControl("")\n * }, {
validators: passwordMatchValidator, asyncValidators: otherValidator });\n *\n * ```\n *\n * ### Set the updateOn
property for all controls in a form group\n *\n * The options object is used to set a default value for each child\n *
control's `updateOn` property. If you set `updateOn` to `blur` at the\n * group level, all child controls default
to `blur`, unless the child\n * has explicitly specified a different `updateOn` value.\n *\n * ```\n *\n * const c = new
FormGroup({\n * one: new FormControl()\n * }, { updateOn: 'blur' });\n *\n * ```\n *\n * ### Using a FormGroup with
optional controls\n *\n * It is possible to have optional controls in a FormGroup. An optional control can be
removed later\n * using `removeControl`, and can be omitted when calling `reset`. Optional controls must be\n *
declared optional in the group's type.\n *\n * ```\n *\n * const c = new FormGroup<{one?: FormControl<string>}>({\n
* one: new FormControl("")\n * });\n *\n * ```\n *\n * Notice that `c.value.one` has type `string|null|undefined`. This is
because calling `c.reset({})`\n * without providing the optional key `one` will cause it to become `null`.\n *\n *
@publicApi\n *\n * export class FormGroup<TControl extends {[K in keyof TControl]: AbstractControl<any>} =
any> extends\n * AbstractControl<\n * TypedOrUntyped<TControl, FormGroupValue<TControl>,\n
any>,\n * TypedOrUntyped<TControl, FormGroupRawValue<TControl>, any>> {\n * /**\n * Creates a new

const formDirectiveProvider: any = {\n  provide: ControlContainer,\n  useExisting: forwardRef(() =>
NgForm)\n};\n\nconst resolvedPromise = (() => Promise.resolve());\n\n/**\n * @description\n * Creates a top-
level `FormGroup` instance and binds it to a form\n * to track aggregate form value and validation status.\n *\n * As
soon as you import the `FormsModule`, this directive becomes active by default on\n
* all `` tags. You don't need to add a special selector.\n *\n * You optionally export the directive into a local
template variable using `ngForm` as the key\n * (ex: `#myForm="ngForm"`). This is optional, but useful. Many
properties from the underlying\n * `FormGroup` instance are duplicated on the directive itself, so a reference to it\n
* gives you access to the aggregate value and validity status of the form, as well as\n * user interaction properties
like `dirty` and `touched`.\n *\n * To register child controls with the form, use `NgModel` with a `name`\n *
attribute. You may use `NgModelGroup` to create sub-groups within the form.\n *\n * If necessary, listen to the
directive's `ngSubmit` event to be notified when the user has\n * triggered a form submission. The `ngSubmit` event
emits the original form\n * submission event.\n *\n * In template driven forms, all `` tags are automatically
tagged as `NgForm`.\n *\n * To import the `FormsModule` but skip its usage in
some forms,\n * for example, to use native HTML5 validation, add the `ngNoForm` and the ``\n * tags
won't create an `NgForm` directive. In reactive forms, using `ngNoForm` is\n * unnecessary because the ``
tags are inert. In that case, you would\n * refrain from using the `formGroup` directive.\n *\n * @usageNotes\n *\n
* ### Listening for form submission\n *\n * The following example shows how to capture the form values from the
`ngSubmit` event.\n *\n * {@example forms/ts/simpleForm/simple_form_example.ts region='Component'}\n *\n
* ### Setting the update options\n *\n * The following example shows you how to change the `updateOn` option
from its default using\n * ngFormOptions.\n *\n * ```html\n * <form [ngFormOptions]="{updateOn: 'blur'}"\n *
<input name="one" ngModel> <!-- this ngModel will update on blur -->\n * </form>\n * ```\n *\n * ### Native
DOM validation UI\n *\n * In order to prevent the native DOM form validation UI from interfering with Angular's
form\n * validation, Angular automatically adds the `novalidate` attribute on any `` whenever\n *
`FormsModule` or `ReactiveFormsModule` are imported into the application.\n *\n * If you want to explicitly enable
native DOM validation UI with Angular forms, you can add the\n * `ngNativeValidate` attribute to the ``
element:\n *\n * ```html\n * <form ngNativeValidate>\n *   ...</form>\n * ```\n *\n * @ngModule
FormsModule\n * @publicApi\n *\n * @Directive({\n  selector: 'form:not([ngNoForm]):not([formGroup]),ng-
form,[ngForm]',\n  providers: [formDirectiveProvider],\n  host: {'(submit)': 'onSubmit($event)', '(reset)':
'onReset()'},\n  outputs: ['ngSubmit'],\n  exportAs: 'ngForm'\n})\n\nexport class NgForm extends ControlContainer

It extends the `AbstractControl` class that\n * implements most of the base\n functionality for accessing the value, validation status,\n * user interactions and events.\n *\n * `FormControl` takes\n a single generic argument, which describes the type of its value. This\n * argument\n always implicitly includes `null`\n because the control can be reset. To change this\n * behavior, set `nonNullable` or see the usage notes below.\n *\n * See [usage examples below](#usage-notes).\n *\n * @see `AbstractControl`\n * @see [Reactive Forms\n Guide](guide/reactive-forms)\n * @see [Usage Notes](#usage-notes)\n *\n * @publicApi\n */\n\n@overriddenImplementation FormControlCtor\n *\n * @usageNotes\n * ### Initializing Form Controls\n *\n * Instantiate a `FormControl`, with an initial value.\n *\n * ```ts\n * const control = new FormControl('some\n value');\n * console.log(control.value); // 'some value'\n *\n * The following example initializes the control\n with a form state object. The `value` and `disabled` keys are required in this case.\n *\n * ```ts\n * const control\n = new FormControl({ value: 'n/a', disabled: true });\n * console.log(control.value); // 'n/a'\n *\n * console.log(control.status); // 'DISABLED'\n *\n * The following example initializes the control with a\n synchronous validator.\n *\n * ```ts\n * const control = new FormControl("", Validators.required);\n *\n * console.log(control.value); // ""\n *\n * console.log(control.status); // 'INVALID'\n *\n * The following\n example initializes the control using an options object.\n *\n * ```ts\n * const control = new FormControl("", {\n * validators: Validators.required,\n * asyncValidators: myAsyncValidator\n * });\n *\n * ```\n *\n * ### The single type argument\n *\n * `FormControl` accepts a generic argument, which describes the\n type of its value.\n * In most cases, this argument will be inferred.\n *\n * If you are initializing the control to `null`,\n or you otherwise wish to provide a\n * wider type, you may specify the argument explicitly:\n *\n * ```ts\n * let fc =\n new FormControl<string|null>(null);\n * fc.setValue('foo');\n *\n * ```\n *\n * You might notice that `null` is always\n added to the type of the control.\n * This is because the control will become `null` if you call `reset`. You can\n change\n * this behavior by setting `{ nonNullable: true }`.\n *\n * ### Configure the control to update on a blur\n event\n *\n * Set the `updateOn` option to `blur` to update on the blur `event`.\n *\n * ```ts\n * const control = new\n FormControl("", { updateOn: 'blur' });\n *\n * ```\n *\n * ### Configure the control to update on a submit event\n *\n * Set the `updateOn` option to `submit` to update on a submit `event`.\n

```

```

*\n * ``ts\n * const control = new FormControl('', { updateOn: 'submit' });\n * ``\n *\n * ### Reset the control
back to a specific value\n *\n * You reset to a specific form state by passing through a standalone\n * value or a
form state object that contains both a value and a disabled state\n * (these are the only two properties that cannot be
calculated).\n *\n * ``ts\n * const control = new FormControl('Nancy');\n *\n * console.log(control.value); //
'Nancy'\n *\n * control.reset('Drew');\n *\n * console.log(control.value); // 'Drew'\n * ``\n *\n * ### Reset the
control to its initial value\n *\n * If you wish to always reset the control to its initial value (instead of null),\n * you
can pass the `nonNullable` option:\n *\n * ``\n * const control = new FormControl('Nancy', { nonNullable: true });\n
*\n * console.log(control.value); // 'Nancy'\n *\n * control.reset();\n *\n * console.log(control.value); // 'Nancy'\n *
``\n *\n * ### Reset the control back to an initial
value and disabled\n *\n * ``\n * const control = new FormControl('Nancy');\n *\n * console.log(control.value); //
'Nancy'\n *\n * console.log(control.status); // 'VALID'\n *\n * control.reset({ value: 'Drew', disabled: true });\n *\n *
console.log(control.value); // 'Drew'\n *\n * console.log(control.status); // 'DISABLED'\n * ``\n
*\n * export interface

```

directive into a local template variable using `ngModel` as the key (ex: `#myVar="ngModel"`). You can then access the control using the directive's `control` property. However, the most commonly used properties (like `valid` and `dirty`) also exist on the control for direct access. See a full list of properties directly available in `AbstractControlDirective`. @see `RadioControlValueAccessor` @see `SelectControlValueAccessor` @usageNotes

### Using ngModel on a standalone control

The following examples show a simple standalone control using `ngModel`:

```

@{example
forms/ts/simpleNgModel/simple_ng_model_example.ts
region='Component'}

```

When using the `ngModel` within `` tags, you'll also need to supply a `name` attribute so that the control can be registered with the parent form under that name. In the context of a parent form, it's often unnecessary to include one-way or two-way binding, as the parent form syncs the value for you. You access its properties by exporting it into a local template variable using `ngForm` such as `<#f="ngForm">`. Use the variable where needed on form submission. If you do need to populate initial values into your form, using a one-way binding for `ngModel` tends to be sufficient as long as you use the exported form's value rather than the domain model's value on submit.

### Using ngModel within a form

The following example shows controls using `ngModel` within a form:

```

@{example forms/ts/simpleForm/simple_form_example.ts
region='Component'}

```

### Using a standalone ngModel within a group

The following example shows you how to use a standalone ngModel control within a form. This controls the display of the form, but doesn't contain form data.

```

<html>
<form>
  <input name="login" ngModel placeholder="Login">
  <input type="checkbox" ngModel [ngModelOptions]="{standalone: true}"> Show more options?
</form>
<!-- form value: {login:
"} -->

```

### Setting the ngModel `name` attribute through options

The following example shows you an alternate way to set the name attribute. Here, an attribute identified as name is used within a custom form control component. To still be able to specify the NgModel's name, you must specify it using the `ngModelOptions` input instead.

```

<html>
<form>
  <my-custom-form-control name="Nancy"
ngModel [ngModelOptions]="{name: 'user'}">
</my-custom-form-control>
</form>
<!-- form value:
{user: } -->

```

@ngModule FormsModule @publicApi

@Directive({
 selector: '[ngModel]:not([formControlName]):not([formControl])',
 providers: [formControlBinding],
 exportAs: 'ngModel'})
export class NgModel extends NgControl implements OnChanges, OnDestroy {
 public override readonly control: FormControl = new FormControl();
 // At runtime we coerce arbitrary values assigned to the
 'disabled' input to a
 'boolean'.
 // This is not reflected in the type of the property because outside of templates, consumers
 // should only deal with booleans. In templates, a string is allowed for convenience and to
 // match the native
 'disabled attribute' semantics which can be observed on input elements.
 // This static member tells the compiler that values of type 'string' can also be assigned
 to the input in a template.

### Register `FormControl` within a group
The
following example shows how to register multiple form controls within a form group and set their value.
@example forms/ts/simpleFormGroup/simple_form_group_example.ts region=Component
To see
`formControlName` examples with different form control types, see:
* Radio buttons:
`RadioControlValueAccessor`
* Selects: `SelectControlValueAccessor`
* Use with ngModel is
deprecated
* Support for using the `ngModel` input property and `ngModelChange` event with reactive

```

form directives has been deprecated in Angular v6 and is scheduled for removal in a future version of Angular.

For details, see [\[Deprecated features\]\(guide/deprecations#ngmodel-with-reactive-forms\)](#).

```

  `FormControl`,\n * `FormGroup` or `FormArray` instances.\n *\n * A `FormArray` aggregates the values of each
  child `FormControl`\n * into an array.\n * It calculates its status by reducing the status values of its children. For
  example, if one of\n * the controls in a `FormArray` is invalid, the entire array becomes invalid.\n *\n *
  `FormArray` accepts
  one generic argument, which is the type of the controls inside.\n * If you need a heterogenous array, use { @link
  UntypedFormArray }.\n *\n * `FormArray` is one of the four fundamental building blocks used to define forms in
  Angular,\n * along with `FormControl`, `FormGroup`, and `FormRecord`.\n *\n * @usageNotes\n *\n * ### Create
  
```

```

an array of form controls
const arr = new FormArray([
  new FormControl('Nancy',
    Validators.minLength(2)),
  new FormControl('Drew')
]);
console.log(arr.value); // ['Nancy',
'Drew']
console.log(arr.status); // 'VALID'

### Create a form array with array-level validators
You include array-level validators and async validators. These come in handy
when you want to perform validation that considers the value of more than one child
control. The two types of validators are passed in separately as the second and third arg
respectively, or together as part of an options object.

const arr = new FormArray([
  new FormControl('Nancy'),
  new FormControl('Drew')
], {
  validators: myValidator,
  asyncValidators: myAsyncValidator
});

### Set the updateOn property for all controls in a form array
The options object is used to set a default value for each child
control's `updateOn` property. If you set `updateOn` to `blur` at the
array level, all child controls default to `blur`, unless the child
has explicitly specified a different `updateOn` value.

const arr = new FormArray([
  new FormControl(),
  { updateOn: 'blur' }
]);

### Adding or removing controls from a form array
To change the controls in the array, use the `push`, `insert`, `removeAt` or `clear`
methods in `FormArray` itself. These methods ensure the controls are properly tracked
in the form's hierarchy. Do not modify the array of `AbstractControl`s used to
instantiate the `FormArray` directly, as that result in strange and unexpected
behavior such as broken change detection.

@publicApi
export class FormArray<TControl extends AbstractControl<any> = any> extends
  AbstractControl<
    TypedOrUntyped<TControl, FormArrayValue<TControl>, any>,

and value when the control value is updated.\n * When false, no events are emitted.\n * The configuration
options are passed to the {@link AbstractControl#updateValueAndValidity\n * updateValueAndValidity}
method.\n * /\n override setValue(value: FormArrayRawValue<TControl>, options: {\n onlySelf?: boolean,\n
emitEvent?: boolean\n } = {}): void {\n assertAllValuesPresent(this, false, value);\n value.forEach((newValue:
any, index: number) => {\n assertControlPresent(this, false, index);\n this.at(index).setValue(newValue,
{onlySelf: true, emitEvent: options.emitEvent});\n });\n this.updateValueAndValidity(options);\n }\n\n /**\n
* Patches the value of the `FormArray`. It accepts an array that matches the\n * structure of the control, and does

```

its best to match the values to the correct controls in the group. It accepts both super-sets and sub-sets of the array without throwing an error.

@usageNotes Patch the values for controls in a form array

```

const arr = new FormArray([
  new FormControl(),
  new FormControl()
]);
console.log(arr.value); // [null, null]
arr.patchValue(['Nancy']);
console.log(arr.value); // ['Nancy', null]

```

@param value Array of latest values for the controls

@param options Configure options that determine how the control propagates changes and emits events after the value changes

- `onlySelf`: When true, each change only affects this control, and not its parent. Default is false.
- `emitEvent`: When true or not supplied (the default), both the `statusChanges` and `valueChanges` observables emit events with the latest status and value when the control value is updated. When false, no events are emitted. The configuration options are passed to the `{@link AbstractControl#updateValueAndValidity updateValueAndValidity}` method.

`updateValueAndValidity` method

```

override patchValue(value: FormArrayValue<TControl>, options: {
  onlySelf?: boolean,
  emitEvent?: boolean
} = {}): void {
  // Even though the `value` argument type doesn't allow `null` and `undefined` values,
  // `patchValue` can be called recursively and inner data structures might have these values,
  // so we just ignore such cases when a field containing FormArray instance receives `null` or `undefined` as a value.
  if (value === null /* both `null` and `undefined` */) return;
  value.forEach((newValue, index) => {
    if (this.at(index)) {
      this.at(index).patchValue(newValue, {onlySelf: true, emitEvent: options.emitEvent});
    }
  });
  this.updateValueAndValidity(options);
}

```

Resets the `FormArray` and all descendants are marked `pristine` and `untouched`, and the value of all descendants to null or null maps. You reset to a specific form state by passing in an array of states that matches the structure of the control. The state is a standalone value or a form state object with both a value and a disabled status.

@usageNotes Reset the values in a form array

```

const arr = new FormArray([
  new FormControl(),
  new FormControl()
]);
arr.reset(['name', 'last name']);
console.log(arr.value); // ['name', 'last name']

```

Reset the values in a form array and the disabled status for the first control

```

arr.reset([
  {value: 'name', disabled: true},
  'last'
]);
console.log(arr.value); // ['last']
console.log(arr.at(0).status); // 'DISABLED'

```

@param value Array of values for the controls

@param options Configure options that determine how the control propagates changes and emits events after the value changes

- `onlySelf`: When true, each change only affects this control, and not its parent. Default is false.
- `emitEvent`: When true or not supplied (the default), both the `statusChanges` and `valueChanges` observables emit events with the latest status and value when the control is reset. When false, no events are emitted. The configuration options are passed to the `{@link AbstractControl#updateValueAndValidity updateValueAndValidity}` method.

```

override reset(value: TypedOrUntyped<TControl, FormArrayValue<TControl>, any> = [], options: {
  onlySelf?: boolean,
  emitEvent?: boolean
} = {}): void {
  this._forEachChild((control: AbstractControl, index: number) => {
    control.reset(value[index], {onlySelf: true, emitEvent: options.emitEvent});
  });
  this._updatePristine(options);
  this._updateTouched(options);
  this.updateValueAndValidity(options);
}

```

The aggregate value of the array, including any disabled controls.

Reports all values regardless of disabled status.

`getRawValue`:

```

FormArrayRawValue<TControl> {
  return this.controls.map((control: AbstractControl) =>
    control.getRawValue());
}

```

Remove all controls in the `FormArray`.

@param options Specifies whether this `FormArray` instance should emit events after all controls are removed.

- `emitEvent`: When true or not supplied (the default), both the `statusChanges` and `valueChanges` observables emit events with the latest status and value when all controls in this `FormArray` instance are removed. When false, no events are emitted.

@usageNotes Remove all elements from a `FormArray`

```

const arr = new FormArray([
  new FormControl(),
  new FormControl()
]);
console.log(arr.length); // 2
arr.clear();
console.log(arr.length); // 0

```

It's a simpler and more efficient

```

alternative to removing all elements one by one:
const arr = new FormArray([
  new FormControl(),
  new FormControl()
]);
while (arr.length) {
  arr.removeAt(0);
}
clear(options: {emitEvent?: boolean} = {}): void {
  if (this.controls.length < 1) return;
  this._forEachChild((control) => control._registerOnCollectionChange(() => {}));
  this.controls.splice(0);
  this.updateValueAndValidity({emitEvent: options.emitEvent});
}

/** Adjusts a negative index by summing it with the length of the array. For very negative indices, the result may remain negative.
@internal
private _adjustIndex(index: number): number {
  return index < 0 ? index + this.length : index;
}

/** @internal
override _syncPendingControls(): boolean {
  let subtreeUpdated = (this.controls as any).reduce((updated: any, child: any) => {

## 1.210 atob 2.1.2

### 1.210.1 Available under license :

Creative Commons Legal Code

Attribution 3.0 Unported

CREATIVE COMMONS CORPORATION IS NOT A LAW FIRM AND DOES NOT PROVIDE LEGAL SERVICES. DISTRIBUTION OF THIS LICENSE DOES NOT CREATE AN ATTORNEY-CLIENT RELATIONSHIP. CREATIVE COMMONS PROVIDES THIS INFORMATION ON AN "AS-IS" BASIS. CREATIVE COMMONS MAKES NO WARRANTIES REGARDING THE INFORMATION PROVIDED, AND DISCLAIMS LIABILITY FOR DAMAGES RESULTING FROM ITS USE.

License

THE WORK (AS DEFINED BELOW) IS PROVIDED UNDER THE TERMS OF THIS CREATIVE COMMONS PUBLIC LICENSE ("CCPL" OR "LICENSE"). THE WORK IS PROTECTED BY COPYRIGHT AND/OR OTHER APPLICABLE LAW. ANY USE OF THE WORK OTHER THAN AS AUTHORIZED UNDER THIS LICENSE OR COPYRIGHT LAW IS PROHIBITED.

BY EXERCISING ANY RIGHTS TO THE WORK PROVIDED HERE, YOU ACCEPT AND AGREE TO BE BOUND BY THE TERMS OF THIS LICENSE. TO THE EXTENT THIS LICENSE MAY BE CONSIDERED TO BE A CONTRACT, THE LICENSOR GRANTS YOU THE RIGHTS CONTAINED HERE IN CONSIDERATION OF YOUR ACCEPTANCE OF SUCH TERMS AND CONDITIONS.

#### 1. Definitions

- a. "Adaptation" means a work based upon the Work, or upon the Work and other pre-existing works, such as a translation, adaptation, derivative work, arrangement of music or other alterations of a literary or artistic work, or phonogram or performance and includes cinematographic adaptations or any other form in which the Work may be recast, transformed, or adapted including in any form recognizably derived from the original, except that a work that constitutes a Collection will not be considered an Adaptation for the purpose of

this License. For the avoidance of doubt, where the Work is a musical work, performance or phonogram, the synchronization of the Work in timed-relation with a moving image ("synching") will be considered an Adaptation for the purpose of this License.

- b. "Collection" means a collection of literary or artistic works, such as encyclopedias and anthologies, or performances, phonograms or broadcasts, or other works or subject matter other than works listed in Section 1(f) below, which, by reason of the selection and arrangement of their contents, constitute intellectual creations, in which the Work is included in its entirety in unmodified form along with one or more other contributions, each constituting separate and independent works in themselves, which together are assembled into a collective whole. A work that constitutes a Collection will not be considered an Adaptation (as defined above) for the purposes of this License.
- c. "Distribute" means to make available to the public the original and copies of the Work or Adaptation, as appropriate, through sale or other transfer of ownership.
- d. "Licensor" means the individual, individuals, entity or entities that offer(s) the Work under the terms of this License.
- e. "Original Author" means, in the case of a literary or artistic work, the individual, individuals, entity or entities who created the Work or if no individual or entity can be identified, the publisher; and in addition (i) in the case of a performance the actors, singers, musicians, dancers, and other persons who act, sing, deliver, declaim, play in, interpret or otherwise perform literary or artistic works or expressions of folklore; (ii) in the case of a phonogram the producer being the person or legal entity who first fixes the sounds of a performance or other sounds; and, (iii) in the case of broadcasts, the organization that transmits the broadcast.
- f. "Work" means the literary and/or artistic work offered under the terms of this License including without limitation any production in the literary, scientific and artistic domain, whatever may be the mode or form of its expression including digital form, such as a book, pamphlet and other writing; a lecture, address, sermon or other work of the same nature; a dramatic or dramatico-musical work; a choreographic work or entertainment in dumb show; a musical composition with or without words; a cinematographic work to which are assimilated works expressed by a process analogous to cinematography; a work of drawing, painting, architecture, sculpture, engraving or lithography; a photographic work to which are assimilated works expressed by a process analogous to photography; a work of applied art; an illustration, map, plan, sketch or three-dimensional work relative to geography, topography, architecture or science; a performance; a broadcast; a phonogram; a compilation of data to the

extent it is protected as a copyrightable work; or a work performed by a variety or circus performer to the extent it is not otherwise considered a literary or artistic work.

- g. "You" means an individual or entity exercising rights under this License who has not previously violated the terms of this License with respect to the Work, or who has received express permission from the Licensor to exercise rights under this License despite a previous violation.
- h. "Publicly Perform" means to perform public recitations of the Work and to communicate to the public those public recitations, by any means or process, including by wire or wireless means or public digital performances; to make available to the public Works in such a way that members of the public may access these Works from a place and at a place individually chosen by them; to perform the Work to the public by any means or process and the communication to the public of the performances of the Work, including by public digital performance; to broadcast and rebroadcast the Work by any means including signs, sounds or images.
- i. "Reproduce" means to make copies of the Work by any means including without limitation by sound or visual recordings and the right of fixation and reproducing fixations of the Work, including storage of a protected performance or phonogram in digital form or other electronic medium.

2. Fair Dealing Rights. Nothing in this License is intended to reduce, limit, or restrict any uses free from copyright or rights arising from limitations or exceptions that are provided for in connection with the copyright protection under copyright law or other applicable laws.

3. License Grant. Subject to the terms and conditions of this License, Licensor hereby grants You a worldwide, royalty-free, non-exclusive, perpetual (for the duration of the applicable copyright) license to exercise the rights in the Work as stated below:

- a. to Reproduce the Work, to incorporate the Work into one or more Collections, and to Reproduce the Work as incorporated in the Collections;
- b. to create and Reproduce Adaptations provided that any such Adaptation, including any translation in any medium, takes reasonable steps to clearly label, demarcate or otherwise identify that changes were made to the original Work. For example, a translation could be marked "The original work was translated from English to Spanish," or a modification could indicate "The original work has been modified.";
- c. to Distribute and Publicly Perform the Work including as incorporated in Collections; and,

d. to Distribute and Publicly Perform Adaptations.

e. For the avoidance of doubt:

i. Non-waivable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme cannot be waived, the Licensor reserves the exclusive right to collect such royalties for any exercise by You of the rights granted under this License;

ii. Waivable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme can be waived, the Licensor waives the exclusive

right to collect such royalties for any exercise by You of the rights granted under this License; and,

iii. Voluntary License Schemes. The Licensor waives the right to collect royalties, whether individually or, in the event that the Licensor is a member of a collecting society that administers voluntary licensing schemes, via that society, from any exercise by You of the rights granted under this License.

The above rights may be exercised in all media and formats whether now known or hereafter devised. The above rights include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. Subject to Section 8(f), all rights not expressly granted by Licensor are hereby reserved.

4. Restrictions. The license granted in Section 3 above is expressly made subject to and limited by the following restrictions:

a. You may Distribute or Publicly Perform the Work only under the terms

of this License. You must include a copy of, or the Uniform Resource Identifier (URI) for, this License with every copy of the Work You Distribute or Publicly Perform. You may not offer or impose any terms on the Work that restrict the terms of this License or the ability of the recipient of the Work to exercise the rights granted to that recipient under the terms of the License. You may not sublicense the Work. You must keep intact all notices that refer to this License and to the disclaimer of warranties with every copy of the Work You Distribute or Publicly Perform. When You Distribute or Publicly Perform the Work, You may not impose any effective technological measures on the Work that restrict the ability of a recipient of the Work from You to exercise the rights granted to that recipient under the terms of the License. This Section 4(a) applies to the Work as incorporated in a Collection, but this does not require the Collection apart from the Work itself to be made subject to the terms of this License. If You create a Collection, upon notice from any Licensor You must, to the extent practicable, remove from the Collection any credit

as required by Section 4(b), as requested. If You create an Adaptation, upon notice from any Licensor You must, to the extent practicable, remove from the Adaptation any credit as required by Section 4(b), as requested.

- b. If You Distribute, or Publicly Perform the Work or any Adaptations or Collections, You must, unless a request has been made pursuant to Section 4(a), keep intact all copyright notices for the Work and provide, reasonable to the medium or means You are utilizing: (i) the name of the Original Author (or pseudonym, if applicable) if supplied, and/or if the Original Author and/or Licensor designate another party or parties (e.g., a sponsor institute, publishing entity, journal) for attribution ("Attribution

Parties") in Licensor's copyright notice,

terms of service or by other reasonable means, the name of such party or parties; (ii) the title of the Work if supplied; (iii) to the extent reasonably practicable, the URI, if any, that Licensor specifies to be associated with the Work, unless such URI does not refer to the copyright notice or licensing information for the Work; and (iv) , consistent with Section 3(b), in the case of an Adaptation, a credit identifying the use of the Work in the Adaptation (e.g., "French translation of the Work by Original Author," or "Screenplay based on original Work by Original Author"). The credit required by this Section 4 (b) may be implemented in any reasonable manner; provided, however, that in the case of a Adaptation or Collection, at a minimum such credit will appear, if a credit for all contributing authors of the Adaptation or Collection appears, then as part of these credits and in a manner

at least as prominent as the credits for the

other contributing authors. For the avoidance of doubt, You may only use the credit required by this Section for the purpose of attribution in the manner set out above and, by exercising Your rights under this License, You may not implicitly or explicitly assert or imply any connection with, sponsorship or endorsement by the Original Author, Licensor and/or Attribution Parties, as appropriate, of You or Your use of the Work, without the separate, express prior written permission of the Original Author, Licensor and/or Attribution Parties.

- c. Except as otherwise agreed in writing by the Licensor or as may be otherwise permitted by applicable law, if You Reproduce, Distribute or Publicly Perform the Work either by itself or as part of any Adaptations or Collections, You must not distort, mutilate, modify or take other derogatory action in relation to the Work which would be prejudicial

to the Original Author's honor or reputation. Licensor

agrees that in those jurisdictions (e.g. Japan), in which any exercise of the right granted in Section 3(b) of this License (the right to make Adaptations) would be deemed to be a distortion, mutilation, modification or other derogatory action prejudicial to the Original

Author's honor and reputation, the Licensor will waive or not assert, as appropriate, this Section, to the fullest extent permitted by the applicable national law, to enable You to reasonably exercise Your right under Section 3(b) of this License (right to make Adaptations) but not otherwise.

## 5. Representations, Warranties and Disclaimer

UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES IN WRITING, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A

PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO SUCH EXCLUSION MAY NOT APPLY TO YOU.

6. Limitation on Liability. EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

## 7. Termination

a. This License and the rights granted hereunder will terminate automatically upon any breach by You of the terms of this License. Individuals or entities who have received Adaptations or Collections from You under this License, however, will not have their licenses terminated provided such individuals or entities remain in full compliance with those licenses.

Sections 1, 2, 5, 6, 7, and 8 will survive any termination of this License.

b. Subject to the above terms and conditions, the license granted here is perpetual (for the duration of the applicable copyright in the Work). Notwithstanding the above, Licensor reserves the right to release the Work under different license terms or to stop distributing the Work at any time; provided, however that any such election will not serve to withdraw this License (or any other license that has been, or is required to be, granted under the terms of this License), and this License will continue in full force and effect unless terminated as stated above.

## 8. Miscellaneous

a. Each time You Distribute or Publicly Perform the Work or a Collection, the Licensor offers to the recipient a license to the Work on the same

- terms and conditions as the license granted to You under this License.
- b. Each time You Distribute or Publicly Perform an Adaptation, Licensor offers to the recipient a license to the original Work on the same terms and conditions as the license granted to You under this License.
  - c. If any provision of this License is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this agreement, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.
  - d. No term or provision of this License shall be deemed waived and no breach consented to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.
  - e. This License constitutes the entire agreement between the parties with respect to the Work licensed here. There are no understandings, agreements or representations with respect to the Work not specified here. Licensor shall not be bound by any additional provisions that may appear in any communication from You. This License may not be modified without the mutual written agreement of the Licensor and You.
  - f. The rights granted under, and the subject matter referenced, in this License were drafted utilizing the terminology of the Berne Convention for the Protection of Literary and Artistic Works (as amended on September 28, 1979), the Rome Convention of 1961, the WIPO Copyright Treaty of 1996, the WIPO Performances and Phonograms Treaty of 1996 and the Universal Copyright Convention (as revised on July 24, 1971). These rights and subject matter take effect in the relevant jurisdiction in which the License terms are sought to be enforced according to the corresponding provisions of the implementation of those treaty provisions in the applicable national law. If the standard suite of rights granted under applicable copyright law includes additional rights not granted under this License, such additional rights are deemed to be included in the License; this License is not intended to restrict the license of any rights under applicable law.

#### Creative Commons Notice

Creative Commons is not a party to this License, and makes no warranty whatsoever in connection with the Work. Creative Commons will not be liable to You or any party on any legal theory for any damages whatsoever, including without limitation any general, special, incidental or consequential damages arising in connection to this license. Notwithstanding the foregoing two (2) sentences, if Creative Commons has expressly identified itself as the Licensor hereunder, it shall have all rights and obligations of Licensor.

Except for the limited purpose of indicating to the public that the Work is licensed under the CCPL, Creative Commons does not authorize the use by either party of the trademark "Creative Commons" or any related trademark or logo of Creative Commons without the prior written consent of Creative Commons. Any permitted use will be in compliance with Creative Commons' then-current trademark usage guidelines, as may be published on its website or otherwise made available upon request from time to time. For the avoidance of doubt, this trademark restriction does not form part of this License.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

## 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect,

to cause the

direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an

example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner

or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean

the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual

or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by

combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided

that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing,

shall

any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

## 1.234.1 Available under license :

Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,

"control" means (i) the power, direct or indirect, to cause the

direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this

License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the

Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding

those notices that do not

pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

#### END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License");  
you may not use this file except in compliance with the License.  
You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

=====

Creative Commons Corporation ("Creative Commons") is not a law firm and does not provide legal services or legal advice. Distribution of Creative Commons public licenses does not create a lawyer-client or other relationship. Creative Commons makes its licenses and related information available on an "as-is" basis. Creative Commons gives no warranties regarding its licenses, any material licensed under their terms and conditions, or any related information. Creative Commons disclaims all liability for damages resulting from their use to the fullest extent possible.

Using Creative Commons Public Licenses

Creative Commons public licenses provide a standard set of terms and

conditions that creators and other rights holders may use to share original works of authorship and other material subject to copyright and certain other rights specified in the public license below. The following considerations are for informational purposes only, are not exhaustive, and do not form part of our licenses.

Considerations for licensors: Our public licenses are intended for use by those authorized to give the public permission to use material in ways otherwise restricted by copyright and certain other rights. Our licenses are irrevocable. Licensors should read and understand the terms and conditions of the license they choose before applying it. Licensors should also secure all rights necessary before applying our licenses so that the public can reuse the material as expected. Licensors should clearly mark any material not subject to the license. This includes other CC-licensed material, or material used under an exception or limitation to copyright. More considerations for licensors: [wiki.creativecommons.org/Considerations\\_for\\_licensors](http://wiki.creativecommons.org/Considerations_for_licensors)

Considerations for the public: By using one of our public licenses, a licensor grants the public permission to use the licensed material under specified terms and conditions. If the licensor's permission is not necessary for any reason--for example, because of any applicable exception or limitation to copyright--then that use is not regulated by the license. Our licenses grant only permissions under copyright and certain other rights that a licensor has authority to grant. Use of the licensed material may still be restricted for other reasons, including because others have copyright or other rights in the material. A licensor may make special requests, such as asking that all changes be marked or described. Although not required by our licenses, you are encouraged to respect those requests where reasonable. More considerations for the public: [wiki.creativecommons.org/Considerations\\_for\\_licensees](http://wiki.creativecommons.org/Considerations_for_licensees)

=====

Creative Commons Attribution  
4.0 International Public License

By exercising the Licensed Rights (defined below), You accept and agree to be bound by the terms and conditions of this Creative Commons Attribution 4.0 International Public License ("Public License"). To the extent this Public License may be interpreted as a contract, You are

granted the Licensed Rights in consideration of Your acceptance of these terms and conditions, and the Licensor grants You such rights in consideration of benefits the Licensor receives from making the Licensed Material available under these terms and conditions.

#### Section 1 -- Definitions.

- a. Adapted Material means material subject to Copyright and Similar Rights that is derived from or based upon the Licensed Material and in which the Licensed Material is translated, altered, arranged, transformed, or otherwise modified in a manner requiring permission under the Copyright and Similar Rights held by the Licensor. For purposes of this Public License, where the Licensed Material is a musical work, performance, or sound recording, Adapted Material is always produced where the Licensed Material is synched in timed relation with a moving image.
- b. Adapter's License means the license You apply to Your Copyright and Similar Rights in Your contributions to Adapted Material in accordance with the terms and conditions of this Public License.
- c. Copyright and Similar Rights means copyright and/or similar rights closely related to copyright including, without limitation, performance, broadcast, sound recording, and Sui Generis Database Rights, without regard to how the rights are labeled or categorized. For purposes of this Public License, the rights specified in Section 2(b)(1)-(2) are not Copyright and Similar Rights.
- d. Effective Technological Measures means those measures that, in the absence of proper authority, may not be circumvented under laws fulfilling obligations under Article 11 of the WIPO Copyright Treaty adopted on December 20, 1996, and/or similar international agreements.
- e. Exceptions and Limitations means fair use, fair dealing, and/or any other exception or limitation to Copyright and Similar Rights that applies to Your use of the Licensed Material.
- f. Licensed Material means the artistic or literary work, database, or other material to which the Licensor applied this Public License.
- g. Licensed Rights means the rights granted to You subject to the terms and conditions of this Public License, which are limited to

all Copyright and Similar Rights that apply to Your use of the Licensed Material and that the Licensor has authority to license.

- h. Licensor means the individual(s) or entity(ies) granting rights under this Public License.
- i. Share means to provide material to the public by any means or process that requires permission under the Licensed Rights, such as reproduction, public display, public performance, distribution, dissemination, communication, or importation, and to make material available to the public including in ways that members of the public may access the material from a place and at a time individually chosen by them.
- j. Sui Generis Database Rights means rights other than copyright resulting from Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, as amended and/or succeeded, as well as other essentially equivalent rights anywhere in the world.
- k. You means the individual or entity exercising the Licensed Rights under this Public License. Your has a corresponding meaning.

## Section 2 -- Scope.

### a. License grant.

1. Subject to the terms and conditions of this Public License, the Licensor hereby grants You a worldwide, royalty-free, non-sublicensable, non-exclusive, irrevocable license to exercise the Licensed Rights in the Licensed Material to:
  - a. reproduce and Share the Licensed Material, in whole or in part; and
  - b. produce, reproduce, and Share Adapted Material.
2. Exceptions and Limitations. For the avoidance of doubt, where Exceptions and Limitations apply to Your use, this Public License does not apply, and You do not need to comply with its terms and conditions.
3. Term. The term of this Public License is specified in Section 6(a).
4. Media and formats; technical modifications allowed. The

Licensor authorizes You to exercise the Licensed Rights in all media and formats whether now known or hereafter created, and to make technical modifications necessary to do so. The Licensor waives and/or agrees not to assert any right or authority to forbid You from making technical modifications necessary to exercise the Licensed Rights, including technical modifications necessary to circumvent Effective Technological Measures. For purposes of this Public License, simply making modifications authorized by this Section 2(a)(4) never produces Adapted Material.

5. Downstream recipients.

- a. Offer from the Licensor -- Licensed Material. Every recipient of the Licensed Material automatically receives an offer from the Licensor to exercise the Licensed Rights under the terms and conditions of this Public License.
- b. No downstream restrictions. You may not offer or impose any additional or different terms or conditions on, or apply any Effective Technological Measures to, the Licensed Material if doing so restricts exercise of the Licensed Rights by any recipient of the Licensed

Material.

6. No endorsement. Nothing in this Public License constitutes or may be construed as permission to assert or imply that You are, or that Your use of the Licensed Material is, connected with, or sponsored, endorsed, or granted official status by, the Licensor or others designated to receive attribution as provided in Section 3(a)(1)(A)(i).

b. Other rights.

1. Moral rights, such as the right of integrity, are not licensed under this Public License, nor are publicity, privacy, and/or other similar personality rights; however, to the extent possible, the Licensor waives and/or agrees not to assert any such rights held by the Licensor to the limited extent necessary to allow You to exercise the Licensed Rights, but not otherwise.
2. Patent and trademark rights are not licensed under this Public License.
3. To the extent

possible, the Licensor waives any right to collect royalties from You for the exercise of the Licensed Rights, whether directly or through a collecting society under any voluntary or waivable statutory or compulsory licensing scheme. In all other cases the Licensor expressly reserves any right to collect such royalties.

### Section 3 -- License Conditions.

Your exercise of the Licensed Rights is expressly made subject to the following conditions.

#### a. Attribution.

1. If You Share the Licensed Material (including in modified form), You must:

a. retain the following if it is supplied by the Licensor with the Licensed Material:

i. identification of the creator(s) of the Licensed Material and any others designated to receive attribution, in any reasonable manner requested by the Licensor (including by pseudonym if designated);

ii. a copyright notice;

iii. a notice that refers to this Public License;

iv. a notice that refers to the disclaimer of warranties;

v. a URI or hyperlink to the Licensed Material to the extent reasonably practicable;

b. indicate if You modified the Licensed Material and retain an indication of any previous modifications; and

c. indicate the Licensed Material is licensed under this Public License, and include the text of, or the URI or hyperlink to, this Public License.

2. You may satisfy the conditions in Section 3(a)(1) in any reasonable manner based on the medium, means, and context in which You Share the Licensed Material. For example, it may be

reasonable to satisfy the conditions by providing a URI or hyperlink to a resource that includes the required information.

3. If requested by the Licensor, You must remove any of the information required by Section 3(a)(1)(A) to the extent reasonably practicable.
4. If You Share Adapted Material You produce, the Adapter's License You apply must not prevent recipients of the Adapted Material from complying with this Public License.

#### Section 4 -- Sui Generis Database Rights.

Where the Licensed Rights include Sui Generis Database Rights that apply to Your use of the Licensed Material:

- a. for the avoidance of doubt, Section 2(a)(1) grants You the right to extract, reuse, reproduce, and Share all or a substantial portion of the contents of the database;
- b. if You include all or a substantial portion of the database contents in a database in which You have Sui Generis Database Rights, then the database in which You have Sui Generis Database Rights (but not its individual contents) is Adapted Material; and
- c. You must comply with the conditions in Section 3(a) if You Share all or a substantial portion of the contents of the database.

For the avoidance of doubt, this Section 4 supplements and does not replace Your obligations under this Public License where the Licensed Rights include other Copyright and Similar Rights.

#### Section 5 -- Disclaimer of Warranties and Limitation of Liability.

- a. UNLESS OTHERWISE SEPARATELY UNDERTAKEN BY THE LICENSOR, TO THE EXTENT POSSIBLE, THE LICENSOR OFFERS THE LICENSED MATERIAL AS-IS AND AS-AVAILABLE, AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE LICENSED MATERIAL, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHER. THIS INCLUDES, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT, ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OR ABSENCE OF ERRORS, WHETHER OR NOT KNOWN OR DISCOVERABLE.

WHERE DISCLAIMERS OF WARRANTIES ARE NOT ALLOWED IN FULL OR IN PART, THIS DISCLAIMER MAY NOT APPLY TO YOU.

b. TO THE EXTENT POSSIBLE, IN NO EVENT WILL THE LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY (INCLUDING, WITHOUT LIMITATION, NEGLIGENCE) OR OTHERWISE FOR ANY DIRECT, SPECIAL, INDIRECT, INCIDENTAL, CONSEQUENTIAL, PUNITIVE, EXEMPLARY, OR OTHER LOSSES, COSTS, EXPENSES, OR DAMAGES ARISING OUT OF THIS PUBLIC LICENSE OR USE OF THE LICENSED MATERIAL, EVEN IF THE LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH LOSSES, COSTS, EXPENSES, OR DAMAGES. WHERE A LIMITATION OF LIABILITY IS NOT ALLOWED IN FULL OR IN PART, THIS LIMITATION MAY NOT APPLY TO YOU.

c. The disclaimer of warranties and limitation of liability provided above shall be interpreted in a manner that, to the extent possible, most closely approximates an absolute disclaimer and waiver of all liability.

#### Section 6 -- Term and Termination.

a. This Public License applies for the term of the Copyright and Similar Rights licensed here. However, if You fail to comply with this Public License, then Your rights under this Public License terminate automatically.

b. Where Your right to use the Licensed Material has terminated under Section 6(a), it reinstates:

1. automatically as of the date the violation is cured, provided it is cured within 30 days of Your discovery of the violation; or
2. upon express reinstatement by the Licensor.

For the avoidance of doubt, this Section 6(b) does not affect any right the Licensor may have to seek remedies for Your violations of this Public License.

c. For the avoidance of doubt, the Licensor may also offer the Licensed Material under separate terms or conditions or stop distributing the Licensed Material at any time; however, doing so will not terminate this Public License.

d. Sections 1, 5, 6, 7, and 8 survive termination of this Public License.

Section 7 -- Other Terms and Conditions.

- a. The Licensor shall not be bound by any additional or different terms or conditions communicated by You unless expressly agreed.
- b. Any arrangements, understandings, or agreements regarding the Licensed Material not stated herein are separate from and independent of the terms and conditions of this Public License.

Section 8 -- Interpretation.

- a. For the avoidance of doubt, this Public License does not, and shall not be interpreted to, reduce, limit, restrict, or impose conditions on any use of the Licensed Material that could lawfully be made without permission under this Public License.
- b. To the extent possible, if any provision of this Public License is deemed unenforceable, it shall be automatically reformed to the minimum extent necessary to make it enforceable. If the provision cannot be reformed, it shall be severed from this Public License without affecting the enforceability of the remaining terms and conditions.
- c. No term or condition of this Public License will be waived and no failure to comply consented to unless expressly agreed to by the Licensor.
- d. Nothing in this Public License constitutes or may be interpreted as a limitation upon, or waiver of, any privileges and immunities that apply to the Licensor or You, including from the legal processes of any jurisdiction or authority.

=====  
Creative Commons is not a party to its public licenses. Notwithstanding, Creative Commons may elect to apply one of its public licenses to material it publishes and in those instances will be considered the Licensor. The text of the Creative Commons public licenses is dedicated to the public domain under the CC0 Public Domain Dedication. Except for the limited purpose of indicating that material is shared under a Creative Commons public license or as otherwise permitted by the Creative Commons policies published at [creativecommons.org/policies](https://creativecommons.org/policies), Creative Commons does not authorize the

use of the trademark "Creative Commons" or any other trademark or logo of Creative Commons without its prior written consent including, without limitation, in connection with any unauthorized modifications to any of its public licenses or any other arrangements, understandings, or agreements concerning use of licensed material. For the avoidance of doubt, this paragraph does not form part of the public licenses.
