# 1.27 wordwrap 1.0.0

## 1.27.1 Available under license :

Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial

revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright 2018 Colin Arenz

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to

You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and

assume any risks associated with Your exercise of permissions under this License.

8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall

any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

### Terms and Conditions for use, reproduction, and distribution

#### 1. Definitions

License shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

Licensor shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

Legal Entity shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, control means **(i)** the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or **(ii)** ownership of fifty percent (50%) or more of the outstanding shares, or **(iii)** beneficial ownership of such entity.

You (or Your) shall mean an individual or Legal Entity exercising permissions granted by this License.

Source form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

Object form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

Work shall mean the work of authorship, whether in Source or Object form, made

available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

Derivative Works shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

Contribution shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, submitted means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as Not a Contribution.

Contributor shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

#### #### 2. Grant of Copyright License

Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

#### #### 3. Grant of Patent License

Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their

Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a

cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

#### #### 4. Redistribution

You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

\* **(a)** You must give any other recipients of the Work or Derivative Works a copy of this License; and

\* **(b)** You must cause any modified files to carry prominent notices stating that You changed the files; and

\* **(c)** You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

\* **(d)** If the Work includes a NOTICE text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

#### #### 5. Submission of Contributions

Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding

such Contributions.

#### #### 6. Trademarks

This License

does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

#### #### 7. Disclaimer of Warranty

Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an AS IS BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

#### #### 8. Limitation of Liability

In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

#### #### 9. Accepting Warranty or Additional Liability

While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

### ### APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets `[]` replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same printed page as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

# 1.92 has-value 1.0.0

## 1.92.1 Available under license :

Creative Commons Legal Code

CC0 1.0 Universal

CREATIVE COMMONS CORPORATION IS NOT A LAW FIRM AND DOES NOT PROVIDE LEGAL SERVICES. DISTRIBUTION OF THIS DOCUMENT DOES NOT CREATE AN ATTORNEY-CLIENT RELATIONSHIP. CREATIVE COMMONS PROVIDES THIS INFORMATION ON AN "AS-IS" BASIS. CREATIVE COMMONS MAKES NO WARRANTIES REGARDING THE USE OF THIS DOCUMENT OR THE INFORMATION OR WORKS PROVIDED HEREUNDER, AND DISCLAIMS LIABILITY FOR DAMAGES RESULTING FROM THE USE OF THIS DOCUMENT OR THE INFORMATION OR WORKS PROVIDED HEREUNDER.

Statement of Purpose

The laws of most jurisdictions throughout the world automatically confer exclusive Copyright and Related Rights (defined below) upon the creator

and subsequent owner(s) (each and all, an "owner") of an original work of authorship and/or a database (each, a "Work").

Certain owners wish to permanently relinquish those rights to a Work for the purpose of contributing to a commons of creative, cultural and scientific works ("Commons")

that the public can reliably and without fear of later claims of infringement build upon, modify, incorporate in other works, reuse and redistribute as freely as possible in any form whatsoever and for any purposes, including without limitation commercial purposes. These owners may contribute to the Commons to promote the ideal of a free culture and the further production of creative, cultural and scientific works, or to gain reputation or greater distribution for their Work in part through the use and efforts of others.

For these and/or other purposes and motivations, and without any expectation of additional consideration or compensation, the person associating CC0 with a Work (the "Affirmer"), to the extent that he or she is an owner of Copyright and Related Rights in the Work, voluntarily elects to apply CC0 to the Work and publicly distribute the Work under its terms, with knowledge of his or her Copyright and Related Rights in the Work and the meaning and intended legal effect of CC0 on those rights.

1. Copyright and Related Rights. A Work made available under CC0 may be protected by copyright and related or neighboring rights ("Copyright and Related Rights"). Copyright and Related Rights include, but are not limited to, the following:

- i. the right to reproduce, adapt, distribute, perform, display, communicate, and translate a Work;
- ii. moral rights retained by the original author(s) and/or performer(s);
- iii. publicity and privacy rights pertaining to a person's image or likeness depicted in a Work;
- iv. rights protecting against unfair competition in regards to a Work, subject to the limitations in paragraph 4(a), below;
- v. rights protecting the extraction, dissemination, use and reuse of data in a Work;
- vi. database rights (such as those arising under Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, and under any national implementation

thereof, including any amended or successor version of such directive); and

- vii. other similar, equivalent or corresponding rights throughout the world based on applicable law or treaty, and any national implementations thereof.

2. Waiver. To the greatest extent permitted by, but not in contravention of, applicable law, Affirmer hereby overtly, fully, permanently, irrevocably and unconditionally waives, abandons, and surrenders all of Affirmer's Copyright and Related Rights and associated claims and causes of action, whether now known or unknown (including existing as well as future claims and causes of action), in the Work (i) in all territories worldwide, (ii) for the maximum duration provided by applicable law or treaty (including future time extensions), (iii) in any current or future medium and for any number of copies, and (iv) for any purpose whatsoever, including without limitation commercial, advertising or promotional purposes (the "Waiver"). Affirmer makes the Waiver for the benefit of each member of the public at large and to the detriment of Affirmer's heirs and successors, fully intending that such Waiver shall not be subject to revocation, rescission, cancellation, termination, or any other legal or equitable action to disrupt the quiet enjoyment of the Work by the public as contemplated by Affirmer's express Statement of Purpose.

3. Public License Fallback. Should any part of the Waiver for any reason be judged legally invalid or ineffective under applicable law, then the Waiver shall be preserved to the maximum extent permitted taking into account Affirmer's express Statement of Purpose. In addition, to the extent the Waiver is so judged Affirmer hereby grants to each affected person a royalty-free, non transferable, non sublicensable, non exclusive, irrevocable and unconditional license to exercise Affirmer's Copyright and Related Rights in the Work (i) in all territories worldwide, (ii) for the maximum duration provided by applicable law or treaty (including future time extensions), (iii) in any current or future medium and for any number of copies, and (iv) for any purpose whatsoever, including without limitation commercial, advertising or promotional purposes (the "License"). The License shall be deemed effective as of the date CC0 was applied by Affirmer to the Work. Should any part of the License for any reason be judged legally invalid or ineffective under applicable law, such partial invalidity or ineffectiveness shall not invalidate the remainder of the License, and in such case Affirmer hereby affirms that he or she will not (i) exercise any of his or her remaining Copyright and Related Rights in the Work or (ii) assert any associated claims and causes of action with respect to the Work, in either case contrary to Affirmer's express Statement of Purpose.

4. Limitations and Disclaimers.

- a. No trademark or patent rights held by Affirmer are waived, abandoned, surrendered, licensed or otherwise affected by this document.
- b. Affirmer offers the Work as-is and makes no representations or warranties of any kind concerning the Work, express, implied,

statutory or otherwise, including without limitation warranties of title, merchantability, fitness for a particular purpose, non infringement, or the absence of latent or other defects, accuracy, or the present or absence of errors, whether or not discoverable, all to the greatest extent permissible under applicable law.

- c. Affirmer disclaims responsibility for clearing rights of other persons that may apply to the Work or any use thereof, including without limitation any person's Copyright and Related Rights in the Work. Further, Affirmer disclaims responsibility for obtaining any necessary consents, permissions or other rights required for any use of the Work.
- d. Affirmer understands and acknowledges that Creative Commons is not a party to this document and has no duty or obligation with respect to this CC0 or use of the Work.

## 1.167 @ampproject/remapping 2.1.2

### 1.167.1 Available under license :

Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

## 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or

agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You"  
(or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the

Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following

boilerplate notice, with the fields enclosed by brackets "[ ]"  
replaced with your own identifying information. (Don't include  
the brackets!) The text should be enclosed in the appropriate  
comment syntax for the file format. We also recommend that a  
file or class name and description of purpose be included on the  
same "printed page" as the copyright notice for easier  
identification within third-party archives.

```

input -\n \* Observable<Action>.\n \*\n \* We provide a type parameter, even though TS will not infer it from the\n \* arguments, to preserve backwards compatibility with old versions of ngrx.\n \* ^\nexport function ofType<V extends Action>(\n ...allowedTypes: Array<string | ActionCreator<string, Creator>>)\n): OperatorFunction<Action, V>;\n/\*\*\n \* `ofType` filters an Observable of `Actions` into an Observable of the actions\n \* whose type strings are passed to it.\n \*\n \* For example, if `actions` has type `Actions<AdditionAction|SubstractionAction>`, and\n \* the type of the `Addition` action is `add`, then\n \* `actions.pipe(ofType('add'))` returns an\n \* `Observable<AdditionAction>`.\n \*\n \* Properly typing this function is hard and requires some advanced TS\n \* tricks\n \* below.\n \*\n \* Type narrowing automatically works, as long as your `actions` object\n \* starts with a\n \* `Actions<SomeUnionOfActions>` instead of generic `Actions`.\n \*\n \* For backwards compatibility, when one passes a single type argument\n \* `ofType<T>('something')` the result is an `Observable<T>`. Note, that `T`\n \* completely overrides any possible inference from 'something'.\n \*\n \* Unfortunately, for unknown 'actions: Actions' these types will produce\n \* 'Observable<never>'. In such cases one has to manually set the generic type\n \* like\n \* `actions.ofType<AdditionAction>('add')`.\n \*\n \* @usageNotes\n \*\n \* Filter the Actions stream on the `customers page loaded`"

/**
 * @description
 * Creates a reducer function to handle state transitions.
 * Reducer creators reduce the
 * explicitness
 * of reducer functions with switch statements.
 * @param initialState Provides a state value if the current state is
 * `undefined`, as it is initially.
 * @param ons Associations between actions and state changes.
 * @returns A
 * reducer function.
 * @usageNotes
 * - Must be used with `ActionCreator`'s (returned by `createAction`).
 * Cannot be used with class-based action creators.
 * - The returned `ActionReducer` should additionally be wrapped
 * with another function, if you are using View Engine AOT.
 * In case you are using Ivy (or only JIT View Engine)
 * the extra wrapper function is not required.
 * **Declaring a reducer creator**
 * ```ts
 * export
   const
     reducer =
       createReducer(
         initialState,
         on(
           featureActions.actionOne,
           featureActions.actionTwo,
           (state, {
             updatedValue
           }) => ({
             ...state,
             prop:
             updatedValue
           })
         ),
         on(
           featureActions.actionThree,
           () =>
             initialState
         )
       );
 * **Declaring a reducer
 * creator using a wrapper function (Only needed if using View Engine AOT)**
 * ```ts
 * const
   featureReducer =
     createReducer(
       initialState,
       on(
         featureActions.actionOne,
         featureActions.actionTwo,
         (state, {
           updatedValue
         }) => ({
           ...state,
           prop:
           updatedValue
         })
       ),
       on(
         featureActions.actionThree,
         () =>
           initialState
       )
     );

```

```

and parses a URL.  
- Normalizing means that a relative URL will be resolved into an absolute URL in the context of the application document.  
- Parsing means that the anchor's `protocol`, `hostname`, `port`, `pathname` and related properties are all populated to reflect the normalized URL.  
While this approach has wide compatibility, it doesn't work as expected on IE. On IE, normalizing happens similar to other browsers, but the parsed components will not be set. (E.g. if you assign `a.href = 'foo'`, then `a.protocol`, `a.host`, etc. will not be correctly updated.)  
We work around that by performing the parsing in a 2nd step by taking a previously normalized URL and assigning it again. This correctly populates all properties.  
See

<https://github.com/angular/angular.js/blob/2c7400e7d07b0f6cec1817dab40b9250ce8ebce6/src/ng/urlUtils.js#L26-L33> for more info.

```
function resolveUrl(anchor: HTMLAnchorElement): string {
  if (!anchor) return document.createElement('a').href;
  anchor.setAttribute('href', url);
  anchor.setAttribute('href', anchor.href);
  return anchor.pathname;
}
```

```
function resolveUrl(url: string): {
  pathname: string,
  search: string,
  hash: string
} {
  if (!url) return document.createElement('a').href;
  url = url.replace(/^\/+/, '');
  return {
    pathname: url.split('#')[0].split('?')[0],
    search: url.split('?')[1] || '',
    hash: url.split('#')[1] || ''
  };
}
```

`RouteReuseStrategy` instructs to re-attach a\n * previously detached subtree.\n */\n  attachEvents?:
EventEmitter<unknown>;\n\n  /**\n * Emits a detached component instance when the `RouteReuseStrategy`
instructs

```

to detach the subtree. The `detachEvents?` property is an `EventEmitter<unknown>`. Acts as a placeholder that Angular dynamically fills based on the current router state. Each outlet can have a unique name, determined by the optional `name` attribute. The name cannot be set or changed dynamically. If not set, default value is `"primary"`.

```
<router-outlet></router-outlet>
```

```
<router-outlet name='left'></router-outlet>
```

```
<router-outlet name='right'></router-outlet>
```

Named outlets can be the targets of secondary routes. The `Route` object for a secondary route has an `outlet` property to identify the target outlet.

```
{ path: <base-path>, component: <component>, outlet: <target_outlet_name> }
```

Using named outlets and secondary routes, you can target multiple outlets in the same `RouterLink` directive. The router keeps track of separate branches in a navigation tree for each named outlet and generates a representation of that tree in the URL. The URL for a secondary route uses the following syntax to specify both the primary and secondary routes at the same time:

```
http://base-path/primary-route-path(outlet-name:route-path)
```

A router outlet emits an `activate` event when a new component is instantiated, a `deactivate` event when a component is destroyed. An attached event emits when the `RouteReuseStrategy` instructs the outlet to reattach the subtree, and the `detach` event emits when the `RouteReuseStrategy` instructs the outlet to detach the subtree.

```
<router-outlet (activate)='onActivate($event)' (deactivate)='onDeactivate($event)' (attach)='onAttach($event)' (detach)='onDetach($event)'></router-outlet>
```

@see [Routing tutorial](guide/router-tutorial-toh#named-outlets "Example of a named outlet and secondary route configuration"). @see `RouterLink` @see `Route`

```

`undefined` indicates that the navigation commands should be applied relative to the root.

`relativeTo?: ActivatedRoute | null;`

`queryParams?: string;` Sets query parameters to the URL.

`queryParamsHandling?: QueryParamsHandling | null;`

`fragment?: string;` Sets the hash fragment for the URL.

`preserve?: boolean;` How to handle query parameters in the router link for the next navigation. One of:

- `'preserve'`: Preserve current parameters.
- `'merge'`: Merge new with current parameters.

`merge?: boolean;` The "preserve" option discards any new query params.

`queryParamsHandling?: QueryParamsHandling | null;` The "merge" option appends new query params to the params from the current URL.

`preserveFragment?: boolean;` In case of a key collision between current parameters and those in the `queryParams` object, the new value is used.

`preserveFragment?: boolean;` When true, preserves the URL fragment for the next navigation.

`options?: RouterOptions;` Options that modify the `Router` navigation strategy. Supply an object containing any of these properties to a `Router` navigation function to control how the target URL should be constructed or interpreted.

`@see [Router.navigate() method](api/router/Router#navigate)`

`@see [Router.navigateByUrl() method](api/router/Router#navigatebyurl)`

`@see [Router.createUrlTree() method](api/router/Router#createurltree)`

`@see [Routing and Navigation guide](guide/router)`

`@see [UrlCreationOptions]`

`@see [NavigationBehaviorOptions]`

`@publicApi`

`@next` export interface

`NavigationExtras extends UrlCreationOptions, NavigationBehaviorOptions {}`

`defaultErrorHandler(error: any): any`

`defaultMalformedUriErrorHandler(error: UriError, urlSerializer: UrlSerializer, url: string): UrlTree`

`RestoredState = { [k: string]: any; }`

`Remove `navigationId` and `routerPageId` and move to `ng` or `` namespace.`

`navigationId: number;` The prefix is there to reduce the chance of colliding with any existing user properties on the history state.

`routerPageId?: number;` Information about a navigation operation.

`Router.getCurrentNavigation() method`

`id: number;` The unique identifier of the current navigation.

`initialUrl: string;` The target URL passed into the `Router#navigateByUrl()` call before navigation. This is the value before the router has parsed or applied redirects to it.

`extractedUrl: string;` The initial target URL after being parsed with `UrlSerializer.extract()`.

`finalUrl: string;` The extracted URL after redirects have been applied. This URL may not be available immediately, therefore this property can be `undefined`. It is guaranteed to be set after the `RoutesRecognized` event fires.

`trigger: string;` Identifies how this navigation was triggered.

- `'imperative'`--Triggered by `router.navigateByUrl()` or `router.navigate()`.
- `'popstate'`--Triggered by a popstate event.
- `'hashchange'`--Triggered by a hashchange event.

`extras: NavigationExtras;` A `NavigationExtras` options object that controlled the strategy used for this navigation.

`previousNavigation: Navigation | null;` The previously successful `Navigation` object. Only one previous navigation is available, therefore this previous `Navigation` object has a `null` value for its own `previousNavigation`.

`@publicApi`

`@next` export interface

`Navigation {`

`id: number;` The unique identifier of the current navigation.

`initialUrl: UrlTree;` The target URL passed into the `Router#navigateByUrl()` call before navigation. This is the value before the router has parsed or applied redirects to it.

`extractedUrl: UrlTree;` The initial target URL after being parsed with `UrlSerializer.extract()`.

`finalUrl: UrlTree;` The extracted URL after redirects have been applied. This URL may not be available immediately, therefore this property can be `undefined`. It is guaranteed to be set after the `RoutesRecognized` event fires.

`trigger: string;` Identifies how this navigation was triggered.

- `'imperative'`--Triggered by `router.navigateByUrl()`

or `router.navigate`.  
 \* `popstate`--Triggered by a popstate event.  
 \* `hashchange`--Triggered by a hashchange event.  
 \* trigger: 'imperative'|'popstate'|'hashchange';  
 \* Options that controlled the strategy used for this navigation.  
 \* See `NavigationExtras`.  
 \* extras: NavigationExtras;  
 \* The previously successful `Navigation` object. Only one previous navigation is available, therefore this previous `Navigation` object has a `null` value for its own `previousNavigation`.  
 \* previousNavigation: Navigation|null;  
 \* export interface NavigationTransition {

 \* @description  
 \* A service that provides navigation among views and URL manipulation capabilities.  
 \* @see `Route`.  
 \* @see [Routing and Navigation Guide](guide/router).  
 \* @ngModule RouterModule  
 \* @publicApi  
 \* @Injectable({  
 providedIn: 'root',  
 useFactory: setupRouter,  
 })  
 \* export class Router {  
 \* Represents the activated `UrlTree` that the `Router` is configured to handle (through `UrlHandlingStrategy`). That is, after we find the route config tree that we're going to activate, run guards, and are just about to activate the route, we set the currentUrlTree.  
 \* This should match the `browserUrlTree` when a navigation succeeds. If the `UrlHandlingStrategy.shouldProcessUrl` is `false`, only the `browserUrlTree` is updated.  
 \* private currentUrlTree: UrlTree;  
 \* Meant to represent the entire browser url after a successful navigation. In the life of a navigation transition:  
 \* 1. The rawUrl represents the full URL that's being navigated to.  
 \* 2. We apply redirects, which might only apply to part of the URL (due to `UrlHandlingStrategy`).  
 \* 3. Right before activation (because we assume activation will succeed), we update the rawUrlTree to be a combination of the urlAfterRedirects (again, this might only apply to part of the

initial url) and the rawUrl of the transition (which was the original navigation url in its full form).  
private rawUrlTree: UriTree; // Meant to represent the part of the browser url that the Router is set up to handle (via the UrlHandlingStrategy). This value is updated immediately after the browser url is updated (or the browser url update is skipped via skipLocationChange).

With that, note that browserUrlTree may not reflect the actual browser URL for two reasons:  
1. UrlHandlingStrategy only handles part of the URL  
2. skipLocationChange does not update the browser url.  
So to reiterate, browserUrlTree only represents the Router's internal understanding of the current route, either before guards with urlUpdateStrategy === 'eager' or right before activation with 'deferred'. This should match the currentUrlTree when the navigation succeeds.  
private browserUrlTree: UriTree;  
private readonly transitions: BehaviorSubject<NavigationTransition>;  
private navigations: Observable<NavigationTransition>;  
private lastSuccessfulNavigation: Navigation|null = null;  
private currentNavigation: Navigation|null = null;  
private disposed = false;  
private locationSubscription?: SubscriptionLike;  
private navigationId: number = 0; // The id of the currently active page in the router. Updated to the transition's target id on a successful navigation. This is used to track what page the router last activated. When an attempted navigation fails, the router can then use this to compute how to restore the state back to the previously active page.  
private currentPageId: number = 0; // The routerPageId of whatever page is currently active in the browser history. This is important for computing the target page id for new navigations because we need to ensure each page id in the browser history is 1 more than the previous entry.  
private get browserPageId(): number|undefined { return (this.location.getState() as RestoredState | null)?.routerPageId; }  
private configLoader: RouterConfigLoader;

// Hook that enables you to pause navigation after the preactivation phase. Used by RouterModule.

@internal  
private afterPreactivation: () => Observable<void> = () => of(void 0); // A strategy for extracting and merging URLs. Used for AngularJS to Angular migrations.  
private urlHandlingStrategy: UrlHandlingStrategy = new DefaultUrlHandlingStrategy();  
// A strategy for re-using routes.  
private routeReuseStrategy: RouteReuseStrategy = new DefaultRouteReuseStrategy();  
// A strategy for setting the title based on the routerState.  
private titleStrategy?: TitleStrategy;  
// How to handle a navigation request to the current URL. One of:  
- 'ignore': The router ignores the request.  
- 'reload': The router reloads the URL. Use to implement a 'refresh' feature.  
Note that this only configures whether the Route reprocesses the URL and triggers related action and events like redirects, guards, and resolvers. By default, the router re-uses a component instance when it re-navigates

to the same component type without visiting a different component first. This behavior is configured by the RouteReuseStrategy. In order to reload routed components on same url navigation, you need to set onSameUrlNavigation to 'reload' and provide a RouteReuseStrategy which returns false for shouldReuseRoute.  
private onSameUrlNavigation: 'reload'|'ignore' = 'ignore';  
// How to merge parameters, data, resolved data, and title from parent to child routes. One of:  
- 'emptyOnly': Inherit parent parameters, data, and resolved data for path-less or component-less routes.  
- 'always': Inherit parent parameters, data, and resolved data for all child routes.  
private paramsInheritanceStrategy: 'emptyOnly'|'always' = 'emptyOnly';  
// Determines when the router updates the browser URL. By

default (``deferred``), updates the browser URL after navigation has finished. \* Set to ``eager`` to update the browser URL at the beginning of navigation. \* You can choose to update early so that, if navigation fails, \* you can show an error message with the URL that failed. \*  
 urlUpdateStrategy: 'deferred'|'eager' = 'deferred';  
 /\*\* \* Enables a bug fix that corrects relative link resolution in components with empty paths. \* @see `RouterModule` \* @deprecated \*  
 relativeLinkResolution: 'legacy'|'corrected' = 'corrected';  
 /\*\* \* Configures how the Router attempts to restore state when a navigation is cancelled. \*  
 \* 'replace' - Always uses `location.replaceState` to set the browser state to the state of the \* router before the navigation started. This means that if the URL of the browser is updated \* \_before\_ the navigation is canceled, the Router will simply replace the item in history rather \* than trying to restore to the previous location in the session history. This happens most \* frequently with `urlUpdateStrategy: 'eager` and navigations with the browser back/forward \* buttons. \*  
 \* 'computed' - Will attempt to return to the same index in the session history that corresponds \* to the Angular route when the navigation gets cancelled. For example, if the browser back \* button is clicked and the navigation is cancelled, the Router will trigger a forward navigation \* and vice versa. \*  
 \* Note: the 'computed' option is incompatible with any `UrlHandlingStrategy` which only \* handles a portion of the URL because the history restoration navigates to the previous place in \* the browser history rather than simply resetting a portion of the URL. \*  
 \* The default value is `replace`. \*  
 canceledNavigationResolution: 'replace'|'computed' = 'replace';  
 /\*\* \* Creates the router service. \*

from '../events';\nimport {Router} from '../router';\nimport {IsActiveMatchOptions} from '../url_tree';\nimport
{RouterLink, RouterLinkWithHref} from '../router_link';\n\n/**\n * @description\n */\n * Tracks whether the

```

linked route of an element is currently active, and allows you to specify one or more CSS classes to add to the element when the linked route is active. Use this directive to create a visual distinction for elements associated with an active route. For example, the following code highlights the word "Bob" when the router activates the associated route:

```
<a routerLink="/user/bob" routerLinkActive="active-link">Bob</a>
```

Whenever the URL is either '/user' or '/user/bob', the "active-link" class is added to the anchor tag. If the URL changes, the class is removed. You can set more than one class using a space-separated string or an array. For example:

```
<a routerLink="/user/bob" routerLinkActive="class1 class2">Bob</a>
```

```
[routerLinkActive]="['class1', 'class2']">Bob</a>
```

To add the classes only when the URL matches the link exactly, add the option `exact: true`:

```
<a routerLink="/user/bob" routerLinkActive="active-link" [routerLinkActiveOptions]="{exact: true}">Bob</a>
```

To directly check the `isActive` status of the link, assign the `RouterLinkActive` instance to a template variable. For example, the following checks the status without assigning any CSS classes:

```
<a routerLink="/user/bob" routerLinkActive #rla="routerLinkActive"> Bob {{ rla.isActive ? '(already open)' : '' }}</a>
```

You can apply the `RouterLinkActive` directive to an ancestor of linked elements. For example, the following sets the active-link class on the `<div>` parent tag when the URL is either '/user/jim' or '/user/bob'.

```
<div routerLinkActive="active-link" [routerLinkActiveOptions]="{exact: true}"> <a routerLink="/user/jim">Jim</a> <a routerLink="/user/bob">Bob</a></div>
```

The `RouterLinkActive` directive can also be used to set the `aria-current` attribute to provide an alternative distinction for active elements to visually impaired users. For example, the following code adds the 'active' class to the Home Page link when it is indeed active and in such case also sets its `aria-current` attribute to 'page':

```
<a routerLink="/" routerLinkActive="active" ariaCurrentWhenActive="page">Home Page</a>
```

```

convertToParamMap(params: Params): ParamMap {
  return new ParamsAsMap(params);
}

Matches the route configuration (`route`) against the actual URL (`segments`).

When no matcher is defined on a `Route`, this is the matcher used by the Router by default.

@param segments The remaining unmatched segments in the current navigation
@param segmentGroup The current segment group being matched
@param route The `Route` to match against.
@see UrlMatchResult
@see Route
@returns The resulting match information or `null` if the `route` should not match.
@publicApi

  * @description\n  * \n  * Represents the parsed URL.\n  * \n  * Since a router state is a tree, and the URL is nothing but
  a serialized state, the URL is a\n  * serialized tree.\n  * \n  * UrlTree is a data structure that provides a lot of affordances in
  dealing with URLs\n  * \n  * @usageNotes\n  * ### Example\n  * \n  * ```\n  *
  * @Component({ templateUrl: 'template.html' })\n  * class MyComponent {\n  *   constructor(router: Router) {\n  *
  const tree: UrlTree =\n  *     router.parseUrl('/team/33/(user/victor//support:help)?debug=true#fragment');\n  *
  const f = tree.fragment; // return 'fragment'\n  *   const q = tree.queryParams; // returns {debug: 'true'}\n  *   const
  g: UrlSegmentGroup = tree.root.children[PRIMARY_OUTLET];\n  *   const s: UrlSegment[] = g.segments; //
  returns 2 segments 'team' and '33'\n  *   g.children[PRIMARY_OUTLET].segments; // returns 2 segments 'user' and
  'victor'\n  *   g.children['support'].segments; // return 1 segment 'help'\n  *   }\n  *   }\n  *   ```\n  * \n  * @publicApi\n
  *\n  * ^\n  * export class UrlTree {\n  *   /** @internal *\n  *   // TODO(issue/24571): remove '!'.\n  *   _queryParamMap!:
  ParamMap;\n  *   /** @internal *\n  *   constructor(\n  *     /** The root segment group of the URL tree *\n  *     public
  root: UrlSegmentGroup,\n  *     /** The query params of the URL *\n  *     public queryParams: Params,\n  *     /** The

/**
 * Creates a `UrlTree` relative to an `ActivatedRouteSnapshot`.
 *
 * @publicApi
 *
 * @param relativeTo The `ActivatedRouteSnapshot` to apply the commands to.
 * @param commands An array of URL fragments with which to construct the new URL tree.
 * If the path is static, can be the literal URL string. For a dynamic path, pass an array of path
 * segments, followed by the parameters for each segment.
 * The fragments are applied to the one provided in the `relativeTo` parameter.
 * @param queryParams The query parameters for the `UrlTree`. `null` if the `UrlTree` does not have
 * any query parameters.
 * @param fragment The fragment for the `UrlTree`. `null` if the `UrlTree` does not have a fragment.
 *
 * @usageNotes
 * ```
 * // create /team/33/user/11
 * createUrlTreeFromSnapshot(snapshot, ['/team', 33, 'user',
    11]);
 * // create /team/33;expand=true/user/11
 * createUrlTreeFromSnapshot(snapshot, ['/team', 33,
    { expand: true }, 'user', 11]);
 * // you can collapse static segments like this (this works only with the first
    passed-in value)
 * createUrlTreeFromSnapshot(snapshot, ['/team/33/user', userId]);
 * // If the first segment
    can contain slashes, and you do not want the router to split it,
 * // you can do the following:
 * createUrlTreeFromSnapshot(snapshot, [{ segmentPath: '/one/two' }]);
 * // create /team/33/(user/11/right:chat)
 * createUrlTreeFromSnapshot(snapshot, ['/team', 33, { outlets: { primary: 'user/11', right:
    'chat' } }], null, null);
 * // remove the right secondary node
 * createUrlTreeFromSnapshot(snapshot, ['/team', 33, { outlets: { primary:
    'user/11', right: null } }]);
 * // For the examples below, assume the current URL is for the `team/33/user/11` and
    the `ActivatedRouteSnapshot` points to `user/11`:
 * // navigate to /team/33/user/11/details
 * createUrlTreeFromSnapshot(snapshot, ['details']);
 * // navigate to /team/33/user/22
 * createUrlTreeFromSnapshot(snapshot, ['../22']);
 * // navigate to /team/44/user/22
 * createUrlTreeFromSnapshot(snapshot, ['../team/44/user/22']);
 * ```

```

navigation is not performed. The location listener is set up before the root component gets created. Use if there is a reason to have more control over when the router starts its initial navigation due to some complex initialization logic.

```

@see `forRoot()`
@publicApi
export type InitialNavigation =
  'disabled'|'enabledBlocking'|'enabledNonBlocking';

```

Extra configuration options that can be used with the `withRouterConfig`` function.

```

@publicApi
@developerPreview
export interface
RouterConfigOptions {
  /**
   * Configures how the Router attempts to restore state when a navigation
   is cancelled.
   * 'replace' - Always uses `location.replaceState` to set the browser state to the state of the
   router before the navigation started. This means that if the URL of the browser is updated
   before the navigation is canceled, the Router will simply replace the item in history rather
   than trying to restore to the previous location in the session history. This happens most
   frequently with `urlUpdateStrategy: 'eager'` and navigations with the browser back/forward
   buttons.
   * 'computed' - Will attempt to return to the same index in the session history that corresponds
   to the Angular route when the navigation gets cancelled. For example, if the browser back
   button is clicked and the navigation is cancelled, the Router will trigger a forward
   navigation and vice versa.
   * Note: the 'computed' option is incompatible with any `UrlHandlingStrategy` which only
   handles a portion of the URL because the history restoration navigates to the previous place in
   the browser history rather than simply resetting a portion of the URL.
   * The default value is `replace` when not set.
   canceledNavigationResolution?:
   'replace'|'computed';
  /**
   * Define what the router should do if it receives a navigation request to the current
   URL.
   * Default is `ignore`, which causes the router ignores the navigation.
   * This can disable features such as a `refresh` button.
   * Use this option to configure the behavior when navigating to the current URL.
   Default is `ignore`.
   onSameUrlNavigation?: 'reload'|'ignore';
  /**
   * Defines how the router merges parameters, data, and resolved data from parent to child
   routes. By default ('emptyOnly'), inherits parent parameters only for
   path-less or component-less routes.
   * Set to 'always' to enable unconditional inheritance of parent parameters.
   * Note that when dealing with matrix parameters, `parent` refers to the parent `Route`
   config which does not necessarily mean the `URL segment to the left`. When the `Route`
   `path` contains multiple segments, the matrix parameters must appear on the last segment.
   For example, matrix parameters for `{path: 'a/b', component: MyComp}` should appear as
   `a/b;foo=bar` and not `a;foo=bar/b`.
   paramsInheritanceStrategy?:
   'emptyOnly'|'always';
  /**
   * Defines when the router updates the browser URL. By default ('deferred'),
   update after successful navigation.
   * Set to 'eager' if prefer to update the URL at the beginning of navigation.
   * Updating the URL early allows you to handle a failure of navigation by showing an error
   message with the URL that failed.
   urlUpdateStrategy?: 'deferred'|'eager';
}

```

Configuration options for the scrolling feature which can be used with `withInMemoryScrolling`` function.

```

@publicApi
@developerPreview
export interface InMemoryScrollingOptions {
  /**
   * When set to 'enabled', scrolls to the anchor element when the URL has a fragment.
   * Anchor scrolling is disabled by default.
   * Anchor scrolling does not happen on 'popstate'. Instead, we restore the position that we
   stored or scroll to the top.
   anchorScrolling?: 'disabled'|'enabled';
  /**
   * Configures if the scroll position needs to be restored when navigating back.
   * 'disabled' - (Default) Does nothing. Scroll position is maintained on navigation.
   * 'top' - Sets the scroll position to x = 0, y = 0 on all navigation.
   * 'enabled' - Restores the previous scroll position on backward navigation, else sets the
   position to the anchor if one is provided, or sets the scroll position to [0, 0]
   (forward navigation). This option will be the default in the future.
   * You can implement custom scroll restoration behavior by adapting the enabled
   behavior as in the following example.
   ```typescript
   class AppComponent {
     movieData: any;
     constructor(private router: Router, private viewportScroller: ViewportScroller,
       changeDetectorRef: ChangeDetectorRef) {
       router.events.pipe(filter((event: Event): event is Scroll => event instanceof
       Scroll)).subscribe(e => {
         fetch('http://example.com/movies.json').then(response => {
           this.movieData = response.json();
           // update the template with the data before restoring scroll
           changeDetectorRef.detectChanges();
           if (e.position) {

```

```

viewportScroller.scrollToPosition(e.position);\n *   }\n *   });\n *   });\n *   }\n *   }\n *   ```\n *^\n

 })  
 export class Router {  
 \* Represents the activated `UrlTree` that the `Router` is configured to handle (through `UrlHandlingStrategy`). That is, after we find the route config tree that we're going to activate, run guards, and are just about to activate the route, we set the `currentUrlTree`.  
 \* This should match the `browserUrlTree` when a navigation succeeds. If the `UrlHandlingStrategy.shouldProcessUrl` is `false`, only the `browserUrlTree`

is updated.\n \*/\n private currentUrlTree: UrlTree;\n /\*\*\n \* Meant to represent the entire browser url after a successful navigation. In the life of a\n \* navigation transition:\n \* 1. The rawUrl represents the full URL that's being navigated to\n \* 2. We apply redirects, which might only apply to \_part\_ of the URL (due to\n \* `UrlHandlingStrategy`).\n \* 3. Right before activation (because we assume activation will succeed), we update the\n \* rawUrlTree to be a combination of the urlAfterRedirects (again, this might only apply to part\n \* of the initial url) and the rawUrl of the transition (which was the original navigation url in\n \* its full form).\n \*/\n private rawUrlTree: UrlTree;\n /\*\*\n \* Meant to represent the part of the browser url that the `Router` is set up to handle (via the\n \* `UrlHandlingStrategy`). This value is updated immediately after the browser url is updated (or\n \* the browser url update is skipped via `skipLocationChange`).

With that, note that\n \* `browserUrlTree` \_may not\_ reflect the actual browser URL for two reasons:\n \*\n \* 1. `UrlHandlingStrategy` only handles part of the URL\n \* 2. `skipLocationChange` does not update the browser url.\n \*\n \* So to reiterate, `browserUrlTree` only represents the Router's internal understanding of the\n \* current route, either before guards with `urlUpdateStrategy === 'eager'` or right before\n \* activation with `deferred`.\n \*\n \* This should match the `currentUrlTree` when the navigation succeeds.\n \*/\n private browserUrlTree: UrlTree;\n private readonly transitions: BehaviorSubject<NavigationTransition>;\n private navigations: Observable<NavigationTransition>;\n private lastSuccessfulNavigation: Navigation|null = null;\n private currentNavigation: Navigation|null = null;\n private disposed = false;\n private locationSubscription?: SubscriptionLike;\n private navigationId: number = 0;\n /\*\*\n \* The id of the currently active page in the router.\n \* Updated to the transition's target id on a successful navigation.\n \*\n \* This is used to track what page the router last activated. When an attempted navigation fails,\n \* the router can then use this to compute how to restore the state back to the previously active\n \* page.\n \*/\n private currentPageId: number = 0;\n /\*\*\n \* The routerPageId of whatever page is currently active in the browser history. This is\n \* important for computing the target page id for new navigations because we need to ensure each\n \* page id in the browser history is 1 more than the previous entry.\n \*/\n private get browserPageId(): number|undefined {\n return (this.location.getState() as RestoredState | null)?.routerPageId;\n }\n private configLoader: RouterConfigLoader;\n private ngModule: NgModuleRef<any>;\n private console: Console;\n private isNgZoneEnabled: boolean = false;\n /\*\*\n \* An event stream for routing events in this NgModule.\n \*/

\*/\n public readonly events: Observable<Event> = new Subject<Event>();\n /\*\*\n \* The current state of routing in this NgModule.\n \*/\n public readonly routerState: RouterState;\n /\*\*\n \* A handler for navigation errors in this NgModule.\n \*/\n errorHandler: ErrorHandler = defaultErrorHandler;\n /\*\*\n \* A handler for errors thrown by `Router.parseUrl(url)`\n \* when `url` contains an invalid character.\n \* The most common case is a `%` sign\n \* that's not encoded and is not part of a percent encoded sequence.\n \*/\n malformedUriErrorHandler: (error: URIError, urlSerializer: UrlSerializer, url: string) => UrlTree = defaultMalformedUriErrorHandler;\n /\*\*\n \* True if at least one navigation event has occurred,\n \* false otherwise.\n \*/\n navigated: boolean = false;\n private lastSuccessfulId: number = -1;\n /\*\*\n \* Hook that enables you to pause navigation after the preactivation phase.\n \* Used by `RouterModule`.\n \*/\n

\* @internal\n \*/\n afterPreactivation: () => Observable<void> = () => of(void 0);\n /\*\*\n \* A strategy for extracting and merging URLs.\n \* Used for AngularJS to Angular migrations.\n \*/\n urlHandlingStrategy: UrlHandlingStrategy = new DefaultUrlHandlingStrategy();\n /\*\*\n \* A strategy for re-using routes.\n \*/\n routeReuseStrategy: RouteReuseStrategy = new DefaultRouteReuseStrategy();\n /\*\*\n \* A strategy for setting the title based on the `routerState`.\n \*/\n titleStrategy?: TitleStrategy;\n /\*\*\n \* How to handle a navigation request to the current URL. One of:\n \*\n \* - `ignore` : The router ignores the request.\n \* - `reload` : The router reloads the URL. Use to implement a `refresh` feature.\n \*\n \* Note that this only configures whether the Route reprocesses the URL and triggers related\n \* action and events like redirects, guards, and resolvers. By default, the router re-uses a\n \* component instance when it re-navigates

to the same component type without visiting a different\n \* component first. This behavior is configured by the `RouteReuseStrategy`. In order to reload\n \* routed components on same url navigation, you need to set `onSameUrlNavigation` to `reload`\n \* and\_ provide a `RouteReuseStrategy` which returns `false` for

```

`shouldReuseRoute`\n *^\n onSameUrlNavigation: 'reload'|'ignore' = 'ignore';\n\n /**\n * How to merge
parameters, data, resolved data, and title from parent to child\n * routes. One of:\n *\n * - `emptyOnly` : Inherit
parent parameters, data, and resolved data\n * for path-less or component-less routes.\n * - `always` : Inherit
parent parameters, data, and resolved data\n * for all child routes.\n *^\n paramsInheritanceStrategy:
'emptyOnly'|'always' = 'emptyOnly';\n\n /**\n * Determines when the router updates the browser URL.\n * By
default (`"deferred"`), updates the browser URL after navigation has finished.\n * Set to `eager`
to update the browser URL at the beginning of navigation.\n * You can choose to update early so that, if
navigation fails,\n * you can show an error message with the URL that failed.\n *^\n urlUpdateStrategy:
'deferred'|'eager' = 'deferred';\n\n /**\n * Enables a bug fix that corrects relative link resolution in components with
empty paths.\n * @see `RouterModule`\n *\n * @deprecated\n *^\n relativeLinkResolution: 'legacy'|'corrected'
= 'corrected';\n\n /**\n * Configures how the Router attempts to restore state when a navigation is cancelled.\n
*\n * 'replace' - Always uses `location.replaceState` to set the browser state to the state of the\n * router before the
navigation started. This means that if the URL of the browser is updated\n * _before_ the navigation is canceled,
the Router will simply replace the item in history rather\n * than trying to restore to the previous location in the
session history. This happens most\n * frequently with `urlUpdateStrategy:
'eager` and navigations with the browser back/forward\n * buttons.\n *\n * 'computed' - Will attempt to return
to the same index in the session history that corresponds\n * to the Angular route when the navigation gets
cancelled. For example, if the browser back\n * button is clicked and the navigation is cancelled, the Router will
trigger a forward navigation\n * and vice versa.\n *\n * Note: the 'computed' option is incompatible with any
`UrlHandlingStrategy` which only\n * handles a portion of the URL because the history restoration navigates to the
previous place in\n * the browser history rather than simply resetting a portion of the URL.\n *\n * The default
value is `replace`.\n *\n *^\n canceledNavigationResolution: 'replace'|'computed' = 'replace';\n\n /**\n * Creates
the router service.\n *^\n // TODO: vsavkin make internal after the final is out.\n constructor(\n private

/**
 * @description
 * When applied to an element in a template, makes that element a
 * link
 * that initiates navigation
 * to a route. Navigation opens one or more routed components
 * in one or more `<router-outlet>` locations on the page.
 * Given a route configuration `{ path: 'user/:name', component: UserCmp }`,
 * the following creates a static link to the route:
 * <a routerLink="/user/bob">link to user component</a>
 * You can use dynamic values to generate the link.
 * For a dynamic link, pass an array of path segments,
 * followed by the params for each segment.
 * For example, `['/team', teamId, 'user', userName, {details: true}]`
 * generates a link to `/team/11/user/bob;details=true`.
 * Multiple static segments can be merged into one term and combined
 * with dynamic segments.
 * For example, `['/team/11/user', userName, {details: true}]`
 * The input that you provide to the link is treated as a delta to the current URL.
 * For instance, suppose the current URL is
 * /user/(box//aux:team).
 * The link <a [routerLink]="['/user/jim']">Jim</a>
 * creates the URL
 * /user/(jim//aux:team).
 * See {@link Router#createUrlTree createUrlTree} for more information.
 *
 * @usageNotes
 * You can use absolute or relative paths in a link, set query parameters,
 * control how parameters are handled, and keep a history of navigation states.
 *
 * ### Relative link paths
 *
 * The first segment name can be prepended with `^`, `./`, or `../`.
 *
 * * If the first segment begins with `^`, the router looks up the route from the root of the
 * app.
 *
 * * If the first segment begins with `./`, or doesn't begin with a slash, the router
 * looks in the children of the current activated route.
 *
 * * If the first segment begins with `../`, the router goes up one level in the route tree.
 *
 * ### Setting and handling query params and fragments
 *
 * The following link adds a query parameter and a fragment to the generated URL:
 * <a
 [routerLink]="['/user/bob']" [queryParams]="{debug: true}" fragment="/education">
 * link
 to user component
 </a>
 *
 * By default, the directive constructs the new URL using the given query
 parameters.
 * The example generates the link: /user/bob?debug=true#education.
 * You can instruct the directive to handle query parameters differently
 * by specifying the `queryParamsHandling` option in the link.
 * Allowed values are:
 *
 * - `merge`: Merge the given `queryParams` into the current query params.
 *
 * -

```

```

`preserve`: Preserve the current query params.\n * For example:\n * <a [routerLink]=["/user/bob"]\n [queryParams]={"debug: true"}\n queryParamsHandling="merge">\n * link to user component\n * </a>\n * See { @link UrlCreationOptions.queryParamsHandling UrlCreationOptions#queryParamsHandling}.\n * ### Preserving navigation history\n * You can provide a `state` value to be persisted to the browser's\n [History.state` property](https://developer.mozilla.org/en-US/docs/Web/API/History#Properties).\n * For example:\n * <a [routerLink]=["/user/bob"] [state]="{tracingId: 123}">\n * link to user component\n * </a>\n * Use { @link Router.getCurrentNavigation() Router#getCurrentNavigation} to retrieve a saved\n * navigation-state value. For example, to capture the `tracingId` during the `NavigationStart`\n * event:\n * // Get NavigationStart events\n * router.events.pipe(filter(e => e instanceof\n NavigationStart)).subscribe(e => {\n * const navigation = router.getCurrentNavigation();\n * tracingService.trace({id: navigation.extras.state.tracingId});\n * });\n * @NgModule RouterModule\n * @publicApi\n * @Directive({\n selector: '.not(a):not(area)[routerLink]',\n standalone: true,\n})\nexport class\n RouterLink implements OnChanges {\n private _preserveFragment = false;\n private _skipLocationChange =\n false;\n private _replaceUrl = false;\n /**\n * Passed to { @link Router#createUrlTree Router#createUrlTree} as\n part of the\n * `UrlCreationOptions`.\n * @see { @link UrlCreationOptions#queryParams\n UrlCreationOptions#queryParams}\n * @see { @link Router#createUrlTree Router#createUrlTree}\n * @Input() queryParams?: Params|null;\n /**\n * Passed to { @link Router#createUrlTree Router#createUrlTree} as\n part of the\n * `UrlCreationOptions`.\n * @see { @link UrlCreationOptions#fragment\n UrlCreationOptions#fragment}\n * @see { @link Router#createUrlTree Router#createUrlTree}\n * @Input()\n fragment?: string;\n /**\n * Passed to { @link Router#createUrlTree Router#createUrlTree} as part of the\n * `UrlCreationOptions`.\n * @see { @link UrlCreationOptions#queryParamsHandling\n UrlCreationOptions#queryParamsHandling}\n * @see { @link Router#createUrlTree Router#createUrlTree}\n * @Input() queryParamsHandling?: QueryParamsHandling|null;\n /**\n * Passed to { @link\n Router#navigateByUrl Router#navigateByUrl} as part of the\n * `NavigationBehaviorOptions`.\n * @see { @link\n NavigationBehaviorOptions#state\n NavigationBehaviorOptions#state}\n * @see { @link Router#navigateByUrl Router#navigateByUrl}\n * @Input() state?: {[k: string]: any};\n /**\n * Passed to { @link Router#createUrlTree Router#createUrlTree} as\n part of the\n * `UrlCreationOptions`.\n * Specify a value here when you do not want to use the default value\n * for `routerLink`, which is the current activated route.\n * Note that a value of `undefined` here will use the\n `routerLink` default.\n * @see { @link UrlCreationOptions#relativeTo UrlCreationOptions#relativeTo}\n * @see\n { @link Router#createUrlTree Router#createUrlTree}\n * @Input() relativeTo?: ActivatedRoute|null;\n\n private commands: any[]|null = null;\n /** @internal\n * onChanges = new Subject<RouterLink>();\n\n constructor(\n private router: Router, private route: ActivatedRoute,\n @Attribute('tabindex') private readonly\n tabIndexAttribute: string|null|undefined,\n private readonly renderer: Renderer2,\n private readonly el: ElementRef) {\n this.setTabIndexIfNotOnNativeEl(0);\n }\n /**\n * Passed to { @link\n Router#createUrlTree Router#createUrlTree} as part of the\n * `UrlCreationOptions`.\n * @see { @link\n UrlCreationOptions#preserveFragment\n UrlCreationOptions#preserveFragment}\n * @see { @link\n Router#createUrlTree Router#createUrlTree}\n * @Input()\n set preserveFragment(preserveFragment:\n boolean|string|null|undefined) {\n this._preserveFragment = coerceToBoolean(preserveFragment);\n }\n get\n preserveFragment(): boolean {\n return this._preserveFragment;\n }\n /**\n * Passed to { @link\n Router#navigateByUrl Router#navigateByUrl} as part of the\n * `NavigationBehaviorOptions`.\n * @see { @link\n NavigationBehaviorOptions#skipLocationChange\n NavigationBehaviorOptions#skipLocationChange}\n * @see\n { @link Router#navigateByUrl Router#navigateByUrl}\n * @Input()\n set\n skipLocationChange(skipLocationChange: boolean|string|null|undefined) {\n this._skipLocationChange = coerceToBoolean(skipLocationChange);\n }\n get\n skipLocationChange(): boolean {\n return this._skipLocationChange;\n }\n /**\n * Passed to { @link Router#navigateByUrl\n Router#navigateByUrl} as part of the\n * `NavigationBehaviorOptions`.\n * @see { @link

import {Router} from './router';
import {IsActiveMatchOptions} from './url_tree';
import {RouterLink, RouterLinkWithHref} from './router_link';

/**
 * Tracks whether the linked route of an element is currently active, and allows you to specify one or more CSS classes to add to the element when the linked route is active.
 * Use this directive to create a visual distinction for elements associated with an active route.
 * For example, the following code highlights the word "Bob" when the router activates the associated route:
 * <a routerLink="/user/bob" routerLinkActive="active-link">Bob</a>
 * Whenever the URL is either '/user' or '/user/bob', the "active-link" class is added to the anchor tag. If the URL changes, the class is removed.
 * You can set more than one class using a space-separated string or an array.
 * For example:
 * <a routerLink="/user/bob" routerLinkActive="class1 class2">Bob</a>
 * <a routerLink="/user/bob" [routerLinkActive]="['class1', 'class2']">Bob</a>
 * To add the classes only when the URL matches the link exactly, add the option `exact: true`:
 * <a routerLink="/user/bob" routerLinkActive="active-link" [routerLinkActiveOptions]="{exact: true}">Bob</a>
 * To directly check the `isActive` status of the link, assign the `RouterLinkActive` instance to a template variable.
 * For example, the following checks the status without assigning any CSS classes:
 * <a routerLink="/user/bob" routerLinkActive #rla="routerLinkActive"> Bob {{ rla.isActive ? '(already open)' : '' }}</a>
 * You can apply the `RouterLinkActive` directive to an ancestor of linked elements.
 * For example, the following sets the active-link class on the `<div>` parent tag when the URL is either '/user/jim' or '/user/bob'.
 * <div routerLinkActive="active-link" [routerLinkActiveOptions]="{exact: true}">
 *   <a routerLink="/user/jim">Jim</a>
 *   <a routerLink="/user/bob">Bob</a>
 * </div>
 * The `RouterLinkActive` directive can also be used to set the aria-current attribute to provide an alternative distinction for active elements to visually impaired users.
 * For example, the following code adds the 'active' class to the Home Page link when it is indeed active and in such case also sets its aria-current attribute to 'page':
 * <a routerLink="/" routerLinkActive="active" ariaCurrentWhenActive="page">Home Page</a>
 * @NgModule RouterModule
 * @publicApi
 * @Directive({
 *   selector: '[routerLinkActive]',
 *   exportAs: 'routerLinkActive',
 *   standalone: true,
 * })
 * export class RouterLinkActive implements OnChanges, OnDestroy, AfterContentInit {

 *   private routerEventsSubscription: Subscription;
 *   private linkInputChangesSubscription?: Subscription;
 *   public readonly isActive: boolean = false;
 *   /**
 *    * Options to configure how to determine if the router link is active.
 *    * These options are passed to the `Router.isActive()` function.
 *    * @see Router.isActive
 *    * @Input() routerLinkActiveOptions: {exact: boolean}|IsActiveMatchOptions = {exact: false};
 *    * Aria-current attribute to apply when the router link is active.
 *    * Possible values: `page` | `step` | `location` | `date` | `time` | `true` | `false`.
 *    * @see {@link https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Attributes/aria-current}
 *    * @Input() ariaCurrentWhenActive?: `page`|`step`|`location`|`date`|`time`|`true`|`false`;
 *    * You can use the output `isActiveChange` to get notified each time the link becomes active or inactive.
 *    * Emits:
 *    * true -> Route is active
 *    * false -> Route is inactive
 *    * <a routerLink="/user/bob" routerLinkActive="active-link" (isActiveChange)="this.onRouterLinkActive($event)">Bob</a>

export class NoPreloading
implements PreloadingStrategy {
  preload(route: Route, fn: () => Observable<any>): Observable<any> {
    return of(null);
  }
}

```

The preloader optimistically loads all router configurations to make navigations into lazily-loaded sections of the application faster. The preloader runs in the background. When the router bootstraps, the preloader starts listening to all navigation events. After every such event, the preloader

will check if any configurations can be loaded lazily. If a route is protected by `canLoad` guards, the preloaded will not load it.

```

 * @publicApi
 * @Injectable({providedIn: 'root'})
export class
RouterPreloader implements OnDestroy {
  private subscription?: Subscription;
  constructor(
    private router: Router,
    private compiler: Compiler,
    private injector: EnvironmentInjector,

    // Note that `canLoad` is only checked as a condition that prevents `loadChildren`
and not `loadComponent`. `canLoad` guards only block loading of child routes by design. This
happens as a consequence of needing to descend into children for route matching immediately
while
component loading is deferred until route activation. Because `canLoad` guards can
have side effects, we
cannot execute them here so we instead skip preloading altogether
when present. Lastly, it remains
to be decided whether `canLoad` should behave this way
at all. Code splitting and lazy loading is separate
from client-side authorization checks
and should not be used as a security measure to prevent loading of
code.

/**
 * @description
 * Adds directives and providers for in-app navigation among views defined in an application.
 * Use the Angular `Router` service to declaratively specify application states and manage state transitions.
 * You can import this NgModule multiple times, once for each lazy-loaded bundle.
 * However, only one `Router` service can be active.
 * To ensure this, there are two ways to register routes when importing this module:
 * * The `forRoot()` method creates an `NgModule` that contains all the directives, the given routes, and the `Router` service itself.
 * * The `forChild()` method creates an `NgModule` that contains all the directives and the given routes, but does not include the `Router` service.
