

Software Installation and Data Migration: Release 6.1 to Release 6.2

Cisco Vision Dynamic Signage Director

Cisco Vision Dynamic Signage Director, Release 6.2.0-579

Last Modified: 2020-01-07

First Published: 2019-07-29

IMPORTANT: Release 6.2 will support a full ISO installation ONLY. There is no upgrade to this release.

Cisco Vision Director is installed within a virtual machine (VM) environment. With our 6.2 release, the VM environment will be used to migrate your data from Release 6.1. Release 6.2 includes a new operating system which requires complete installation. This means you create and configure a second instance of Cisco Vision Dynamic Signage Director to be a secondary, with a complete backup of the primary Cisco Vision Director software.

Note: The installation (full ISO) image of 6.2 is not posted on cisco.com. To obtain the 6.2 installation image, please send an email to cvupgrades@cisco.com and include your cisco.com user ID and the site being upgraded.

For additional information, please refer to the Cisco Vision Software Installation and Upgrade Guide, for Release 6.2.

Overview

IMPORTANT: If you have any data from Quest/NCR and/or Micros, remove this data from the Dynamic Menu Boards, including associations in the luxury suites. If there are widget data integrations (and widgets), that directly or indirectly use Quest/NCR and Micros Point of Sale (POS) data, remove them. Integration with Quest/NCR and Micros is not supported with Release 6.0.

- o The recommended procedure involves using a primary and secondary server redundancy configuration.
- o Release 6.1 system will back up the configuration to the Release 6.2 system using the regular primary/secondary backup copy mechanism.
- o Setup the new Release 6.2 system as the secondary server, if not already present.

Cisco Systems, Inc. www.cisco.com

- o Ensure the new primary Cisco Vision Director is performing as expected.
- o Migrate the secondary Cisco Vision Director to Release 6.2.

WHAT IS IT

Migration of data from older Dynamic Signage Director (DSD) versions to the newest release. Unless you follow these steps, your previous data will be lost. This is a different procedure from an automated incremental upgrade. Release 6.2 contains a new operating system which requires a new installation and the data migration.

WHY USE IT

To preserve your data from a single or primary server running the most current Release 6.1 to a new or secondary server containing a fresh ISO installation of Release 6.2.

WHERE TO CONFIGURE IT

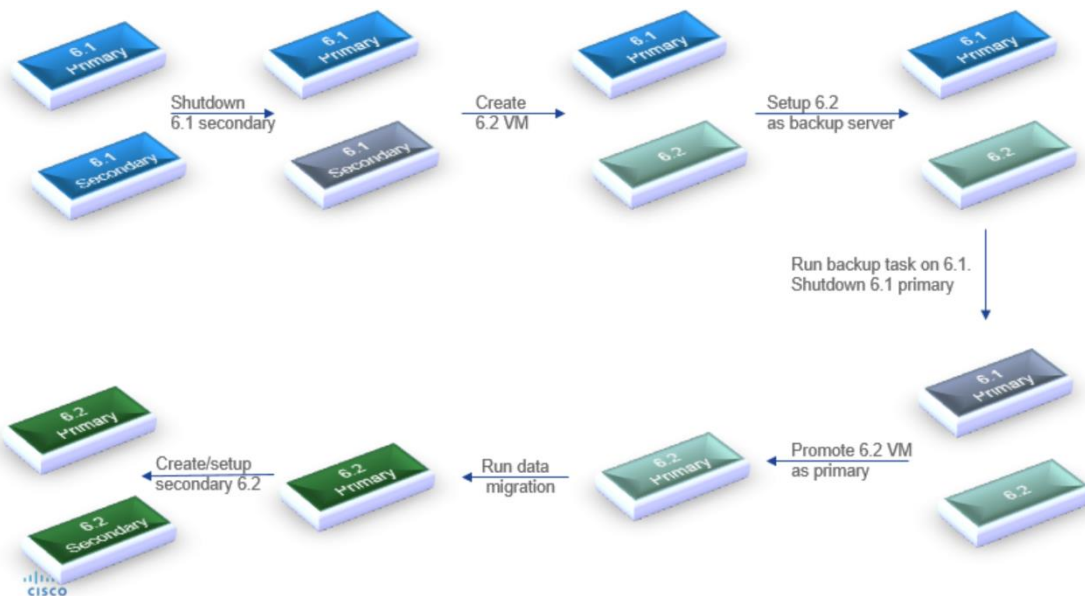

The following prerequisite conditions apply:

- o Two virtual machines matching Cisco Vision Director requirements, the second VM will have Release 6.2
- o Both machines have the ability to reach each other over the network
- o One of the machines is an established Cisco Vision Director server running the latest Release 6.1 SP.
- o You have a 6.2 FULL ISO file (see the first note on how to obtain)

Figure 1 shows the installation flow. This procedure assumes the following:

- o Release 6.1 Primary, Secondary (P1, S1) VM Server
- o Release 6.2 Primary, Secondary (P2, S2) VM Server

Figure 1. Release 6.2 Installation Using Two Servers

IMPORTANT: Before you begin, generate and download any proof of play reports.

Note: Timezone and NTP must be configured per [Release 6.2: Cisco Vision Dynamic Signage Director Administration Guide](#).

To generate Proof of Play reports:

1. Login to Dynamic Signage Director Release 6.1. Go to:
Tools > Control Panel > Setup > Proof of Play.

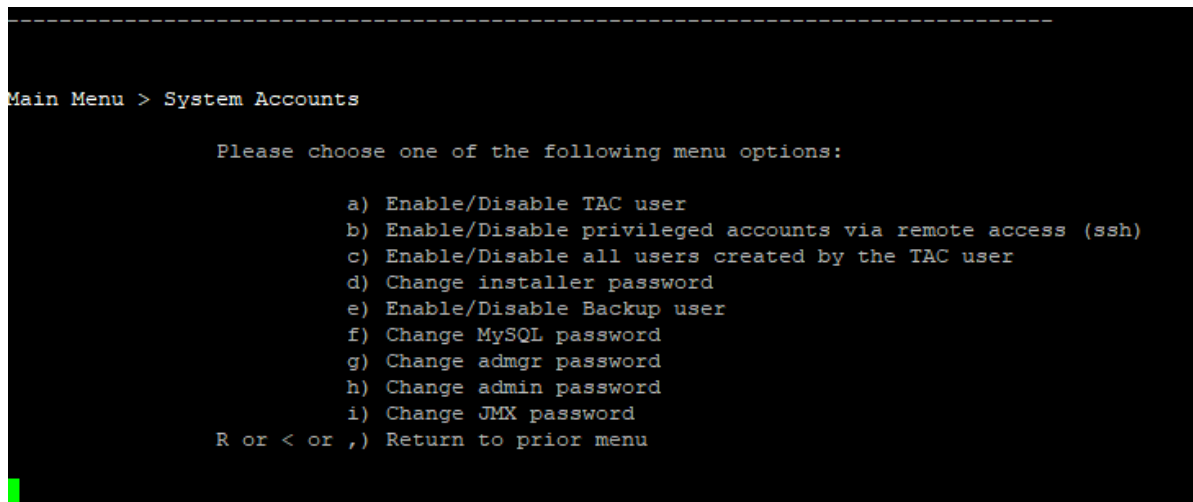

Perform a Full Install of Dynamic Signage Director Release 6.2

2. Refer to the [Cisco Vision Software Installation and Upgrade Guide for Release 6.2](#) for complete instructions. Configure it with the same memory profile as Release 6.1 (standard or small configuration).

Enable Remote Access on Dynamic Signage Director Release 6.2

3. Login to the DSD TUI. Go to:
Main Menu > System Accounts > Change installer password ([Figure 2](#)).

Figure 2. Change Installer Password in TUI

4. Choose a password and save it. Note this password safely, as Cisco TAC personnel cannot retrieve it.
5. From System Accounts menu, choose e) Enable/Disable Backup user. Follow screen prompts and set up the backup user key from the primary system to use it.
6. From System Accounts menu, choose b) Enable/Disable privileged accounts via remote access (ssh) ([Figure 3](#)).

Figure 3. Enable/Disable Privileged Accounts Over Remote (SSH)

```
-----
Main Menu > System Accounts > Enable/Disable privileged accounts via remote access (ssh)

Please choose one of the following menu options:

    a) Enable privileged accounts over remote (ssh)
    b) Disable privileged accounts over remote (ssh)
R or < or ,) Return to prior menu
```

Note: After completing the data migration, return here and disable remote access for added security.

Set Dynamic Signage Director Release 6.2 as Secondary Server

For simplicity, stop the services in Dynamic Signage Director Release 6.2.

7. Go to the TUI Main Menu. Choose c) Services Control > i) Dynamic Signage Director Services > a) All (Figure 4).

Figure 4. Stop Service on Dynamic Signage Director

```
-----
Main Menu > Services Control > Dynamic Signage Director Services > All

Please choose one of the following menu options:

    a) Show Status
    b) Start Service
    c) Stop Service
R or < or ,) Return to prior menu
```

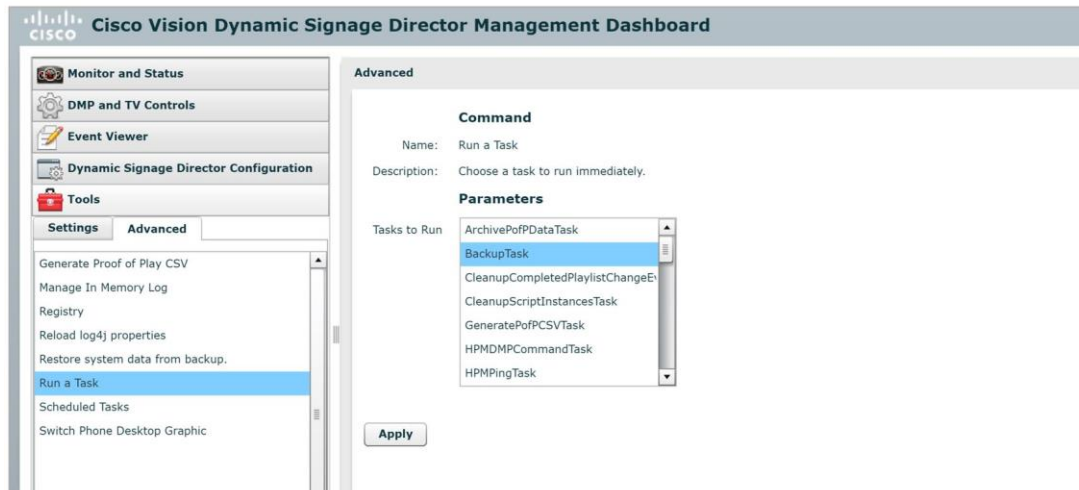

8. Choose c) Stop Service.

Configure the Backup Server on Dynamic Signage Director Release 6.1

9. Use the Cisco Vision Director TUI to log in to DSD Release 6.1 as installer.
10. Go to:
 - Main Menu > Cisco Vision Server Administration > Setup automatic backup and restore.
11. For the inactive DSD server, enter the IP address of DSD Release 6.2 server (Figure 5).

15. In the right panel Parameters field, click Backup Task (Figure 7).
16. Click Apply. The backup may take some time to complete. Click Apply only once.

Figure 7. Run Backup Task

Note: Backup tasks may take a while to finish, particularly if there is a lot of content.

Restore and Migrate the DSD Release 6.1 Backup Server on DSD Release 6.2 Server

17. Login to Cisco Vision Director TUI.
18. Type `d` for Cisco Vision Server Administration.
19. Type `o` for Restore and Migrate Release 6.1 Backup (Figure 8).

Figure 8. Restore and Migrate Release 6.1 Backup

```

Main Menu > Cisco Vision Server Administration

Please choose one of the following menu options:

a) Display Software Version
b) Upgrade Server
c) Restart Dynamic Signage Director software
d) Shutdown Dynamic Signage Director software
e) Setup automatic backup and restore
f) Re-Run CiscoVision initial configuration
g) Retention Policy
h) Database Maintenance
i) Clear Switch Host Keys
j) Failover
k) Setup Memory Profile
l) Reboot
m) Power Off
n) Clean up content import history table
o) Restore and Migrate Release 6.1 Backup
p) Restore all system data from system backup
R or < or ,) Return to prior menu

```

Note: Once migration starts, DO NOT press any keys on your keyboard until migration is done.

Note: The restore operation can only be performed once.

IMPORTANT: If the only option you see is 0, go up one level up the menu tree and come back in a few minutes.

20. Log into the TUI as installer using a directly-connected console or SSH client.

The TUI Main Menu displays.

21. Type Services Control > i) Dynamic Signage Director Services > a) All.

22. Type b) Start Service.

The Cisco Vision Director services are started and configured to start automatically when a reboot occurs.

23. If the backup and transfer to DSD Release 6.2 completes, you will see an option 1. Select 1) option (Figure 9).

Figure 9. Option 1: Restore Backup

```

Restore a backup from version 6.1 and migrate to 6.2.
Restore and migration will wipe out any changes you have made in this system.

0) [Cancel]
1) Restore backup from Fri Jul 12 01:40:19 PDT

Please select a menu from above and press enter:

```

24. Press Y to start the data restore and migration (Figure 10).

The backup may appear to be migrated, but the copy operation may not be complete. If you see an error message saying “No such file or directory” or “Checksum is wrong!” after you press Y, wait until the copy process completes.

Figure 10. Start Restore and Backup Data from Release 6.1 and Migrate to Release 6.2 Process

```

Restore a backup from version 6.1 and migrate to 6.2.
Restore and migration will wipe out any changes you have made in this system.

0) [Cancel]
1) Restore backup from Fri Jul 12 01:40:19 PDT

Please select a menu from above and press enter: 1

Restore and migrate a 6.1 backup (sv-6.1.0.608-20190712014019-0700.tar).
Do you want to continue?
PRESS Y TO CONTINUE, PRESS N TO CANCEL

```

25. Wait until process completes. You will see a screen similar to [Figure 11](#).

Figure 11. Restore and Backup Complete

```

Restore a backup from version 6.1 and migrate to 6.2.
Restore and migration will wipe out any changes you have made in this system.

0) [Cancel]
1) Restore backup from Fri Jul 12 01:40:19 PDT

Please select a menu from above and press enter: 1

Restore and migrate a 6.1 backup (sv-6.1.0.608-20190712014019-0700.tar).
Do you want to continue?
PRESS Y TO CONTINUE, PRESS N TO CANCEL
Y

Restoring from backup sv-6.1.0.608-20190712014019-0700.tar

This could take some time. Please wait.../bin/rm: cannot remove '/var/log/menulUpdate.log': No such
file or directory

Please reboot this DSD server for all changes to take effect.Press any key to return._

```

26. Reboot DSD server for changes to save.

Shut Down DSD Release 6.1 Server

27. Go to DSD Release 6.1 TUI Main Menu > d) Cisco Vision Server Administration.

28. Select m) Power Off.

Prepare to Setup DSD Release 6.2 as the Primary Server

29. Go to Cisco Vision Director TUI Main Menu > a) System Settings > a) Network Settings.

30. Select a) Setup Network Information.

31. Change the IP address of DSD Release 6.2 to the IP address of DSD Release 6.1.

32. Navigate to c) Edit hosts file to change the IP address.

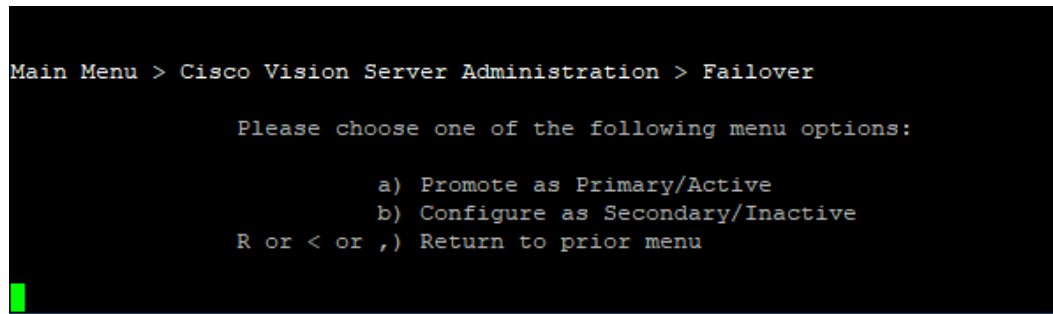

33. Select d) Generate certificate file.

Note: Since you previously set DSD Release 6.2 as secondary/inactive in [Set Dynamic Signage Director Release 6.2 as Secondary Server](#) on page 4, promote DSD Release 6.2 to the primary/active server.

34. Go to:

Main Menu > d) Cisco Vision Server Administration > j) Failover > a) Promote as Primary/Active ([Figure 12](#)).

Figure 12. Promote DSD Release 6.2 Server to Primary

35. Navigate up to Main Menu > d) Cisco Vision Server Administration > l) Reboot.
36. Perform all system verifications.

Note: Contact your Cisco TAC representative to help you retrieve an offline backup, if necessary.

Setup the DSD Release 6.2 Server

Note: Skip this step if your deployment does not have a secondary server.

37. Perform a full installation of DSD Release 6.2 on a new VM. Use the same IP address as the DSD Release 6.1 server. See “Changing the IP Address on the Secondary Server” in [Cisco Vision Administration Guide, Release 6.2](#).
38. Use the TUI to configure the DSD Release 6.2 server. See “Starting and Configuring the Services on the Secondary Server” in [Cisco Vision Administration Guide, Release 6.2](#).
39. Use the TUI on the Release 6.2 primary server to configure automatic backup and restore to point to DSD Release 6.2 server. See “Setting up the Primary Server for Automatic Backup and Restore” in [Cisco Vision Administration Guide, Release 6.2](#).

Access DSD Release 6.2 Server from a Browser

40. Clear your browser cache.
41. Enter the IP address of DSD Release 6.2 on your browser address bar.
42. Press Return (Enter).

Note: If you are performing this procedure long after the initial release of Cisco Vision DSD Release 6.2, use the standard incremental upgrade process to apply Service Packs. See the [Cisco Vision Administration Guide, Release 6.2](#).

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see [What's New in Cisco Product Documentation](#).
