Interoperability with Cisco Unified CCX

This chapter describes features in Cisco Unified Communications Manager Express (Cisco Unified CME) that provide support for interoperability between Cisco Unified CME and external feature services, such as Cisco Customer Response Solutions (CRS) with Cisco Unified Contact Center Express (Cisco Unified CCX).

Information About Interoperability with Cisco Unified CCX

Unified CME 4.2 to Unified CME 8.5 Release versions support interoperability between Cisco Unified CME and Cisco Customer Response Solutions (CRS) with Cisco Unified Call Center Express (Cisco Unified CCX), including enhanced call processing, device and call monitoring, unattended call transfers to multiple call center agents and basic extension mobility, and IP IVR applications.

✎

Note For Unified CME 8.6 and later releases, CRS with Unified CCX is not supported.

The Cisco Unified CCX application uses the CRS platform to provide a multimedia (voice, data, and web). Cisco IP IVR functionality is available with Cisco Unified CCX and includes prompt-and-collect and call treatment.

The following functions are provided in Unified CME Release 4.2 to 8.5 for interoperability with Unified CCX:

- Support of Cisco Unified CCX Cisco Agent Desktop for use with Cisco Unified CME

- Configuration query and update between Cisco Unified CCX and Cisco Unified CME

- SIP-based simple and supplementary call control services including:

    - Call routing between Cisco Unified CME and Cisco Unified CCX using SIP-based route point

    - First-party call control for SIP-based simple and supplementary calls

    - Call monitoring and device monitoring based on SIP presence and dialog event package

- Cisco Unified CCX session management of Cisco Unified CME

- Cisco Unified CCX device and call monitoring of agent lines and call activities in Cisco Unified CME

Provisioning and configuration information in Cisco Unified CCX is automatically provided to Cisco United CME. If the configuration from Cisco Unified CCX is deleted or must be modified, you can configure the same information in Cisco Unified CME by using Cisco IOS commands.

For first party call control, a route point for Cisco CRS is a peer device to Cisco Unified CME through a SIP trunk. An incoming call to Cisco Unified CME that is targeted to a call center phone is routed to Cisco Unified CCX through the route point. The call is placed in a queue and redirected to the most suitable agent by Cisco Unified CCX.

Supplementary services such as call hold, blind transfer, and semi-attended transfer are initiated by Cisco Unified CCX. Existing SIP-based simple and supplementary service call flow applies except for blind transfers. For blind transfers with Cisco Unified CCX as the transferrer, Cisco Unified CCX will stay in the active state until the transfer target answers. It drops out only after the transferred call is successfully answered. If the transfer target does not answer when ringing times out, the call is pulled back by Cisco Unified CCX and rerouted to another agent. This mechanism also applies when the transfer target is configured with call-forward all or forward no-answer. The forward configuration is ignored during blind transfer.

When a call moves between Cisco Unified CCX and Cisco Unified CME because of redirect, transfer, and conference, the SIP Call-ID continues to change. For call control purposes, Cisco Unified CME issues a unique Global Call ID (Gcid) for every outbound call leg. A Gcid remains the same for all legs of the same call in the system, and is valid for redirect, transfer, and conference events, including 3-party conferencing when a call center phone acts as a conference host.

Before Cisco IOS Release 12.4(11)XW6, if the call monitoring module in Cisco Unified CME 4.2 detected a call associated with a non default session application, such as B-ACD or a TCL script, the module was globally disabled. After the module was disabled, Cisco Unified CCX administration had to manually re-enable the call monitoring module after the session completes.

In Cisco IOS Release 12.4(11)XW6 and later releases, the call monitoring module in Cisco Unified CME does not monitor a call associated with a non default session application, such as B-ACD or a TCL script, including all calls merged into this call by way of consult transfer and conference. The module is not disabled and continues to monitor other calls.

Table 1: Tasks to Configure Interoperability between Cisco CRS and Cisco Unified CME, on page 2 contains a list of tasks required to enable operability between Cisco Unified CME and Cisco Unified CCX, presented in the order in which the tasks are to be completed. This section contains information about performing tasks in the first 2 steps in this table and procedures for completing step 3.

For configuration information, see Configure Interoperability with Cisco Unified CCX, on page 3.

Table 1: Tasks to Configure Interoperability between Cisco CRS and Cisco Unified CME

Step	Task	Name of Document
1	Verify that the appropriate Cisco Unified Communications Manager Express (Cisco Unified CME) version is installed on the router. For compatibility information, see Cisco Unified Contact Center Express (Cisco Unified CCX) Software and Hardware Compatibility Guide.	—

Step	Task	Name of Document
2	Configure the Cisco Unified CME router. **Tip** Note the XML user ID and password in Cisco Unified CME and router's IP address.	See "Prerequisites' section in Enable Interoperability with Cisco Unified CCX, on page 3.
3	Configure Cisco Unified CME to enable interoperability with Cisco Unified CCX.	Configure Interoperability with Cisco Unified CCX, on page 3
4	Install Cisco Unified Contact Center Express (Cisco Unified CCX) for Cisco Unified CME.	See *Cisco Unified Contact Center Express Administration Guide* at Configuration Guides.
5	Perform the initial setup of Cisco CRS for Cisco Unified CME. **Tip** When setup launches, you are asked for the XML user ID and password, known as AXL user in Cisco CRS, that you created in Cisco Unified CME. You also must enter the router IP address.	
6	Configure Cisco Unified CME telephony subsystem to enable interoperability with Cisco Unified CCX.	*"Provisioning Unified CCX for Unified CME"* chapter in the appropriate *Cisco CRS Administration Guide* or *Cisco Unified Contact Center Express Administration Guide* at Configuration Guides.
7	Create users and assign the agent capability in Cisco CRS.	

Configure Interoperability with Cisco Unified CCX

Enable Interoperability with Cisco Unified CCX

To configure Cisco Unified CME to enable interoperability between Cisco Unified CME and Cisco Unified CCX, perform the following steps.

Note A single Cisco Unified CME can support multiple session managers.

Restriction
- Maximum number of *active* Cisco Unified CCX agents supported: 50.
- Multi-Party Ad Hoc and Meet-Me Conferencing are not supported.
- The following incoming calls are supported for deployment of the interoperability feature: SIP trunk calls from another Cisco Unified CME and all calls from a PSTN trunk. Other trunks, such H.323, are supported as usual in Cisco Unified CME, however, not for customer calls to Cisco Unified CCX.

Before you begin

- Cisco Unified CME version and Cisco IOS release that is compatible with your Cisco Unified CCX version. For compatibility information, see Cisco Unified Contact Center Express (Cisco Unified CCX) Software and Hardware Compatibility Guide.

- XML API must be configured to create an AXL username for Cisco Unified CCX access. For configuration information, see Configure the XML API.

✎

Note   During the initial setup of Cisco CRS for Cisco Unified CME, you need the AXL username and password that was configured using the **xml user** command in telephony-service configuration mode. You also need the router IP address that was configured using the **ip source-address** command in telephony-service configuration mode.

- Agent phones to be connected in Cisco Unified CME must be configured in Cisco Unified CME. When configuring a Cisco Unified CCX agent phone, use the **keep-conference endcall** command to enable conference initiators to exit from conference calls and end the conference for the remaining parties. For configuration information, see Configure Hardware Conferencing.

- The Cisco Unified CME router must be configured to accept incoming presence requests. For configuration information, see Configure Presence Service.

- To support Desktop Monitoring and Recording, the **service phone SpanToPCPort 1** command must be configured in telephony-service configuration mode. For configuration information, see Modify Vendor Parameters for All SCCP Phones.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice call send-alert**
4. **voice service voip**
5. **callmonitor**
6. **gcid**
7. **allow-connections sip to sip**
8. **no supplementary-service sip moved-temporary**
9. **no supplementary-service sip refer**
10. **sip**
11. **registrar server** [**expires** [**max** *sec*] [**min** *sec*]]
12. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	**enable** **Example:** `Router> enable`	Enables privileged EXEC mode. • Enter your password if prompted.

	Command or Action	**Purpose**
Step 2	**configure terminal** **Example:** `Router# configure terminal`	Enters global configuration mode.
Step 3	**voice call send-alert** **Example:** `Router(config)# voice call send-alert`	Enables the terminating gateway to send an alert message instead of a progress message after it receives a call setup message.
Step 4	**voice service voip** **Example:** `Router(config)# voice service voip`	Enters voice-service configuration mode and specifies voice-over-IP encapsulation.
Step 5	**callmonitor** **Example:** `Router(config-voi-serv)# callmonitor`	Enables call monitoring messaging functionality. • Used by Cisco Unified CCX for processing and reporting.
Step 6	**gcid** **Example:** `Router(config-voi-serv)# gcid`	Enables Global Call-ID (Gcid) for call control purposes. • Used by Cisco Unified CCX for tracking call.
Step 7	**allow-connections sip to sip** **Example:** `Router(config-voi-serv)# allow-connections sip to sip`	Allows connections between specific types of endpoints in a VoIP network.
Step 8	**no supplementary-service sip moved-temporary** **Example:** `Router(config-voi-serv)# no supplementary-service sip moved-temporary`	Prevents the router from sending a redirect response to the destination for call forwarding.
Step 9	**no supplementary-service sip refer** **Example:** `Router(config-voi-serv)# no supplementary-service sip refer`	Prevents the router from forwarding a REFER message to the destination for call transfers.
Step 10	**sip** **Example:** `Router(config-voi-serv)# sip`	Enters SIP configuration mode.
Step 11	**registrar server** [**expires** [**max** *sec*] [**min** *sec*]] **Example:** `Router(config-voi-sip)# registrar server expires max 600 min 60`	Enables SIP registrar functionality in Cisco Unified CME. • **expires**—(Optional) Sets the active time for an incoming registration. • **max** *sec*—(Optional) Maximum time for a registration to expire, in seconds. Range: 600 to 86400. Default: 3600. Recommended value: 600.

	Command or Action	Purpose
		Note Ensure that the registration expiration timeout is set to a value smaller than the TCP connection aging timeout to avoid disconnection from the TCP. • **min** *sec*—(Optional) Minimum time for a registration to expire, in seconds. Range: 60 to 3600. Default: 60.
Step 12	**end** **Example:** `Router(config-voi-serv)# end`	Exits configuration mode and enters privileged EXEC mode.

Identify Agent Directory Numbers in Cisco Unified CME for Session Manager on SCCP Phones

To specify which directory numbers, associated with phone lines on Cisco Unified CCX agent phones, can be managed by a session manager, perform the following steps.

☞

Restriction

- Only SCCP phones can be configured as agent phones in Cisco Unified CME. The Cisco VG224 Analog Phone Gateway and analog and SIP phones are supported as usual in Cisco Unified CME, however, not as Cisco Unified CCX agent phones.

- Cisco Unified IP Phone 7931 cannot be configured as an agent phone in Cisco Unified CME. Cisco Unified IP Phone 7931s are supported as usual in Cisco Unified CME, however, not as Cisco Unified CCX agent phones.

- Shared-line appearance is not supported on agent phones. A directory number cannot be associated with more than one physical agent phone at one time.

- Overlaid lines are not supported on agent phones. More than one directory number cannot be associated with a single line button on an agent phone.

- Monitored mode for a line button is not supported on agent phones. An agent phone cannot be monitored by another phone.

- Cisco Unified CCX does not support a call event that includes a different directory number; all call events must include the primary directory number. Call transfers between phones with single-line directory numbers will cause call monitoring to fail.

Before you begin

- Up to eight session managers must be configured in Cisco Unified CME.

- Directory numbers associated with Cisco Unified CCX agent phones must be configured in Cisco Unified CME.

- Cisco Unified CME 4.2: Directory numbers for agent phones must be configured as dual lines to allow an agent to make two call connections at the same time using one phone line button. Note that if the second line of the dual-line directory number is busy, a transfer event between phones in the solution will fail to complete.

- Cisco Unified CME 4.3/7.0 and later versions: We recommend that directory numbers for agent phones be configured as octal lines to help to ensure that a free line with the same directory number is available for a transfer event.

- For configuration information, see Configure Phones to Make Basic Call.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ephone-dn** *dn-tag*
4. **allow watch**
5. **session-server** *session-server-tag* [**,...***session-server-tag*]
6. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	**enable** **Example:** Router# enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	**configure terminal** **Example:** Router# configure terminal	Enters global configuration mode.
Step 3	**ephone-dn** *dn-tag* **Example:** Router(config)# ephone-dn 24	Enters ephone-dn configuration mode. • *dn-tag*—Unique ID of an already configured directory number. The tag number corresponds to a tag number created when this directory number was initially configured.
Step 4	**allow watch** **Example:** Router(config-ephone-dn)# allow watch	Allows the phone line associated with this directory number to be monitored by a watcher in a presence service. • This command can also be configured in ephone-dn template configuration mode and applied to one or more phones. The ephone-dn configuration has priority over the ephone-dn template configuration.
Step 5	**session-server** *session-server-tag* [**,...***session-server-tag*] **Example:**	Specifies which session managers are to monitor the directory number being configured.

	Command or Action	Purpose
	Router(config-ephone-dn)# session-server 1,2,3,4,6	• *session-server-tag*—Unique ID session manager, configured in Cisco Unified CCX and automatically provided to Cisco Unified CME. Range: 1 to 8. **Tip** If you do not know the value for *session-server-tag*, we recommend using 1. • Can configure up to eight session-server-tags; individual tags must be separated by commas (**,**). • Each directory number can be managed by up to eight session managers. Each session manager can monitor more than one directory number.
Step 6	**end** **Example:** Router(config-ephone-dn)# end	Exits configuration mode and enters privileged EXEC mode.

Verify Registrations and Subscriptions in Cisco Unified CME

Before using the system, verify registrations and subscriptions for Cisco Unified CCX endpoints.

Step 1 Use the **show sip status registrar** command to verify whether session manager and Cisco CRS route points are registered.

Step 2 Use the **show presence subscription summary** command to verify whether Cisco CRS route points and Cisco Unified CCX agent directory numbers are subscribed.

The following is sample output from the **show presence subscription summary** command. The first two rows show the status for two route points. The next two are for logged in agent phones.

```
Router# show presence subscription summary

Presence Active Subscription Records Summary: 15 subscription
Watcher                 Presentity              SubID Expires SibID  Status
======================= ======================= ====== ======= ====== ======
CRScontrol@10.4.171.81  8101@10.4.171.34        4      3600    0      idle
CRScontrol@10.4.171.81  8201@10.4.171.34        8      3600    0      idle
CRScontrol@10.4.171.81  4016@10.4.171.34        10 3600   0     idle
CRScontrol@10.4.171.81  4020@10.4.171.34        12 3599   0     idle
```

Re-create a Session Manager in Cisco Unified CME

✎

Note   Provisioning and configuration information in Cisco Unified CCX is automatically provided to Cisco United CME. The following task is required only if the configuration from Cisco Unified CCX is deleted or must be modified.

To re-create a session manager in Cisco Unified CME for Cisco Unified CCX, perform the following steps.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice register session-server** *session-server-tag*
4. **register id** *name*
5. **keepalive** *seconds*
6. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	**enable** **Example:** Router# enable	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	**configure terminal** **Example:** Router# configure terminal	Enters global configuration mode.
Step 3	**voice register session-server** *session-server-tag* **Example:** Router(config)# voice register session-server 1	Enters voice register session-server configuration mode to enable and configure a session manager for an external feature server, such as the Cisco Unified CCX application on a Cisco CRS system. • Range: 1 to 8. • A single Cisco Unified CME can support multiple session managers.
Step 4	**register id** *name* **Example:** Router(config-register-fs)# CRS1	(Optional) Required only if the configuration from Cisco Unified CCX is deleted or must be modified. • *name*—String for identifying Cisco Unified CCX. Can contain 1 to 30 alphanumeric characters.
Step 5	**keepalive** *seconds* **Example:**	(Optional) Required only if the configuration from Cisco Unified CCX is deleted or must be modified.

	Command or Action	Purpose
	Router(config-register-fs)# keepalive 300	• Keepalive duration for registration, in seconds, after which the registration expires unless Cisco Unified CCX reregisters before the registration expiry.
		• Range: 60 to 3600. Default: 300.
		Note Default in Cisco Unified CCX is 120.
Step 6	**end** **Example:** Router(config-register-fs)# end	Exits configuration mode and enters privileged EXEC mode.

Reconfigure a Cisco CRS Route Point as a SIP Endpoint

Note   Provisioning and configuration information in Cisco Unified CCX is automatically provided to Cisco United CME. The following task is required only if the configuration from Cisco Unified CCX is deleted or must be modified.

To reconfigure a Cisco CRS route point as a SIP endpoint in Cisco Unified CME, perform the following steps.

Restriction
- Each Cisco CRS route point can be managed by only one session manager.
- Each session manager can manage more than one Cisco CRS route point.

Before you begin

- Directory numbers associated with Cisco CRS route points must be configured in Cisco Unified CME. For configuration information for directory numbers associated with SIP endpoints, see Configure Phones to Make Basic Call.
- Directory numbers associated with Cisco CRS route points must be enabled to be watched. For configuration information, see Configure Presence Service.
- The **mode cme** command must be enabled in Cisco Unified CME.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice register dn** *dn-tag*
4. **number** *number*
5. **session-server** *session-server-tag* [**,...***session-server-tag*]

6. **allow watch**
7. **refer target dial-peer**
8. **exit**
9. **voice register pool** *pool-tag*
10. **number** *tag* **dn** *dn-tag*
11. **session-server** *session-server-tag*
12. **codec** *codec-type*
13. **dtmf-relay sip-notify**
14. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	**enable** **Example:** `Router# enable`	Enables privileged EXEC mode. • Enter your password if prompted.
Step 2	**configure terminal** **Example:** `Router# configure terminal`	Enters global configuration mode.
Step 3	**voice register dn** *dn-tag* **Example:** `Router(config-register-global)# voice register dn 1`	Enters voice register dn configuration mode to define a directory number for a SIP phone, intercom line, voice port, or a message-waiting indicator (MWI).
Step 4	**number** *number* **Example:** `Router(config-register-dn)# number 2777`	Defines a valid number for a directory number.
Step 5	**session-server** *session-server-tag* [**,**...*session-server-tag*] **Example:** `Router(config-register-dn)# session-server 1`	Specifies which session managers are to monitor the directory number being configured. • *session-server-tag*—Unique ID session manager, configured in Cisco Unified CCX and automatically provided to Cisco Unified CME. Range: 1 to 8. **Tip** If you do not know the value for *session-server-tag*, we recommend using 1. • Can configure up to eight session-server-tags; individual tags must be separated by commas (**,**). • Each directory number can be managed by up to eight session managers. Each session manager can monitor more than one directory number.

	Command or Action	**Purpose**
Step 6	**allow watch** **Example:** Router(config-register-dn)# allow watch	Allows the phone line associated with this directory number to be monitored by a watcher in a presence service.
Step 7	**refer target dial-peer** **Example:** Router(config-register-dn)# refer target dial-peer	Enables watcher to handle SIP REFER message from this directory number. • **target dial-peer**—Refer To portion of message is based on address from dial peer for this directory number.
Step 8	**exit** **Example:** Router(config-register-dn)# exit	Exits configuration mode to the next highest mode in the configuration mode hierarchy.
Step 9	**voice register pool** *pool-tag* **Example:** Router(config)# **voice register pool 3**	Enters voice register pool configuration mode to set device-specific parameters for a Cisco CRS route point. • A voice register pool in Cisco Unified CCX can contain up to 10 individual SIP endpoints. Subsequent pools are created for additional SIP endpoints.
Step 10	**number** *tag* **dn** *dn-tag* **Example:** Router(config-register-pool)# number 1 dn 1	Associates a directory number with the route point being configured.
Step 11	**session-server** *session-server-tag* **Example:** Router(config-register-pool)# session-server 1	identifies session manager to be used to control the route point being configured. • *session-server-tag*—Unique number assigned to a session manager. Range: 1 to 8. The tag number corresponds to a tag number created by using the **voice register session-server** command.
Step 12	**codec** *codec-type* **Example:** Router(config-register-pool)# codec g711ulaw	Specifies the codec for the dial peer dynamically created for the route point being configured. • *codec-type*—g711ulaw is required for Cisco Unified CCX.
Step 13	**dtmf-relay sip-notify** **Example:** Router(config-register-pool)# dtmf-relay sip-notify	Specifies DTMF Relay method to be used by the route point being configured.
Step 14	**end** **Example:**	Exits configuration mode and enters privileged EXEC mode.

Command or Action	Purpose
`Router(config-register-pool)# end`	

Configuration Examples for Interoperability with Cisco Unified CCX

The following output from the **show running-configuration** command shows the configuration on a Cisco Unified CME router that will interoperate with Cisco Unified CCX.

Where to Go Next

If you are done modifying parameters for phones in Cisco Unified CME, generate a new configuration file and restart the phones. See Generate Configuration Files for Phones.

Feature Information for Interoperability with Cisco Unified CCX

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 2: Feature Information for Interoperability Feature

Feature Name	Cisco Unified CME Version	Modification
Interoperability with Cisco Unified CCX	4.2	Enables interoperability between Cisco Unified CME and Cisco Customer Response Solutions (CRS) 5.0 and later versions with Cisco Unified Contact Center Express (Cisco Unified CCX), including Cisco Unified IP IVR, enhanced call processing, device and call monitoring, unattended call transfers to multiple call center agents, and basic extension mobility.
